INTRODUCTION

Introducing Skydent - Experts in Removable Appliances and Advanced Prosthetics

Why Partner with Skydent?

At Skydent, we combine technical precision with clinical insight, offering dental professionals a seamless extension of their team:

- ✓ Full-service private denture laboratory and clinic
- ✓ Specialists in implant-retained, cosmetic and flexible dentures
- ✓ Cutting-edge digital workflows

–

accepting STL files from most major intraoral scanners

- ✓ Direct clinical support from Martin Coldicott CDT

–

30+ years experience in denture craftsmanship

What Sets Us Apart

• Consistent Quality, Every Time

We use only premium materials, combining digital and traditional methods to produce dentures that fit precisely and function reliably.

• Proactive Communication

Our technicians are always available to offer advice or discuss a case. We keep our partners informed every step of the way and share updates on new techniques and materials that meet our standards.

• A Truly Bespoke Service

Every dentist has their own style and preferences. We take the time to understand how you work, ensuring our lab feels like an extension of your practice – the next best thing to having an in-house technician.

• Speed and Flexibility

We know that turnaround times can be critical. That's why we do our best to accommodate urgent cases whenever possible – without compromising on quality.

Our Mission

Dentures today should not be a compromise. Patients expect – and deserve – prosthetics that are comfortable, functional, and natural-looking. At Skydent, we're committed to delivering just that. Our goal is to help dental professionals provide outstanding care by supplying products that enhance patients' confidence, wellbeing, and quality of life. Whether you need a trusted lab for reliable private work, or clinical support to reduce chair time, **Skydent is here to support your practice.**

A Brief Guide About Our Dentures

Acrylic Denture Tiers

● **Bronze Dentures** – High-Quality Entry Level

Our Bronze dentures offer a reliable, aesthetically pleasing solution at an accessible price point.

- **Teeth:** We use *Natura 4* layered acrylic teeth, designed for improved durability and natural appearance.
 - **Acrylic Base:** Made with *Royale acrylic*, which is stronger and more shock-resistant than standard acrylics.
 - **Process:** Each denture is individually flask packed and finished with a high-gloss polish for a clean, professional look.
- These are ideal for patients seeking a dependable, private-quality denture with enhanced materials over NHS alternatives.

● **Silver Dentures**

–

Precision Fit and Enhanced Aesthetics

Our Silver dentures represent a significant step up in both fit and appearance.

- **Teeth:** We use *Enigma Life* teeth—multi-layered for depth, lifelike translucency, and secure bonding to the base.
- **Acrylic Base:** Injected using the *Ivobase system*, which provides superior fit and comfort by eliminating the distortions common with traditional flask packing.
- **Benefits:** Reduced residual monomer and shrinkage results in a more biocompatible, better-fitting denture.
- **Finish:** Completed with natural gum contouring and a high-shine polish for a realistic appearance.

Ideal for patients who want enhanced comfort, realism, and precision.

● **Gold Dentures**

–

Premium Aesthetics & Strength

Our Gold dentures are the ultimate in private denture craftsmanship—designed for patients seeking the very best.

- **Teeth:** We use *Artegral* teeth, which feature a PMMA base and layered acrylic for superior lifelike detail and translucency. These are among the most realistic and durable teeth available today.
- **Acrylic Base:** Injected using the *Ivobase system* with *high-impact acrylic*, offering maximum strength and longevity.
- **Finish:** Finished with expertly sculpted, stippled gum work for a natural look, and polished to a mirror-like shine.

Perfect for patients who want the most natural, durable, and cosmetically advanced denture available.

A Consistent Standard of Care Across All Tiers

No matter which option you choose, all Skydent dentures are made with meticulous attention to detail by the same expert team. The tiered pricing simply reflects the different materials and processing techniques used—not a difference in the care or craftsmanship. If you'd like to discuss which option is right for you or your patient, our friendly clinical team is always happy to help.

Flexible dentures offer an excellent solution for patients seeking a more natural-feeling and resilient prosthesis. The material softens slightly at body temperature, allowing it to adapt comfortably to the contours of the mouth. This results in outstanding retention and a secure, comfortable fit that patients quickly adapt to.

Flexible Dentures - An Advanced option for Comfort and Retention

Unlike traditional acrylic, flexible dentures are highly durable and virtually unbreakable, making them ideal for patients prone to dropping or damaging their dentures.

For cases requiring additional support, such as free-end saddles, a hybrid approach combining a chrome framework with flexible clasps can be used. This offers the rigidity and stability of cobalt chrome with the aesthetic, adaptable retention of flexible clasps – a particularly effective option when traditional design limitations apply.

Flexible dentures are a versatile and valuable addition to any treatment plan, especially for patients looking for comfort, discretion, and reliability.

Lead Times

Bite/Special Tray stage Vacuum Formed Appliances

5 Full Working day in the laboratory

Try in + Acrylic finish stage

5 Full days in the laboratory

Exclusive Finish Stage

5 Full days in the laboratory

Patient Referrals

At **Skydent**, we pride ourselves on offering services that go beyond the scope of most dental laboratories. Led by Martin Coldicott (Clinical Dental Technician), our team combines technical precision with clinical excellence to deliver high-quality results and exceptional patient care.

Why Refer to Skydent?

We understand the increasing demands placed on dental surgeries. That's why we provide a referral-based denture service that helps free up valuable clinical time, allowing your team to focus on more complex or higher-value treatments.

Martin is a highly experienced CDT with direct access to edentulous patients and a trusted reputation across the region. For dentate patients, we accept referrals directly from your practice. Whether your clinicians are facing a backlog of denture cases or simply prefer not to take on denture work, we are more than happy to support you and your patients.

Services Available:

- **Full Clinical Denture Service**

Start-to-finish denture treatment for referred patients (Direct access for edentulous patients)

- **Same-Day Services** – perfect for emergencies or convenience, all handled within the same day.

- **Repairs** – Ready in **1 hour**
- **Additions & Relines** – Completed within **3 hours**
- **Acrylic Dentures** – Full process from impression to fit in just **7 days**
- **Chromes/Flexi** – 2/3 weeks

If you would like to refer a patient or discuss how **Skydent** can support your practice, please don't hesitate to contact us. We look forward to working with you. We have enclosed a referral form for your ease:

Embracing Digital Dentistry at SkyDent

At [Skydent](#), we're proud to be part of the digital evolution in dentistry. We now accept intra-oral scans directly from leading platforms including iTero, 3Shape, Medit, and many others. If your scanner isn't listed, no problem — simply email your STL files to digital@skydent.co.uk.

While we recognise that digital dentures still have certain limitations, we offer a full range of digitally designed and manufactured appliances, including 3D-printed and milled solutions.

If you have any questions about digital workflows or case suitability, our dedicated digital technician is always available to offer support and advice.

We welcome your scans and look forward to working with you digitally.
