

LANDS END DENTAL

### **Caring for Dentures and Partial Dentures**

- Dentures and partials take some time to adjust to; return to your dentist for post operative visits ASAP to relieve sore spots or trouble shoot other difficulties
- Refrain from wearing your dentures 24/7. Your mouth and tissues need some time to breathe, and could develop a yeast infection if they do not. We typically recommend leaving the dentures out overnight while you sleep.
- Always store your dentures in the provided case when not in use. Failure to do so could lead to their damage or misplacement.
- Clean your dentures daily with a denture brush, cool water, and regular hand soap to remove daily plaque buildup.
- Maintain routine dental visits to evaluate your denture's fit and function, complete routine oral cancer screenings, and professionally clean your denture
