Introduction

Transparent cement is a combination of a large number of fiber optics with fine concrete. It is transparent and has the same strength as cement.

Having light or no light behind the cement presents a completely different effect. Combined with RGB lightings, transparent cement can yield a “next level” artistic and decorative aesthetic feeling. The sky is the limit when it comes to the design and application.

Introduction

Product name: Non-Opaque (Transparent) Cement

Product specifications: 600*1200/900*20/30/50mm2440*8mm

Product features: Durable environmental protection, Heat Insulation, Easy Maintenance, Can do Curved Surfaces.

Applicable space: Interior Wall and Partitions

Color Display

600mm*900mm
600mm*1200mm

Installation

The background of the slide is a photograph of a wall with a rough, textured surface, possibly stone or concrete. A window with a dark frame is visible on the right side of the image. The overall lighting is soft and natural.

Please contact us for Detailed Installation Procedure.
