## **Preparation:**

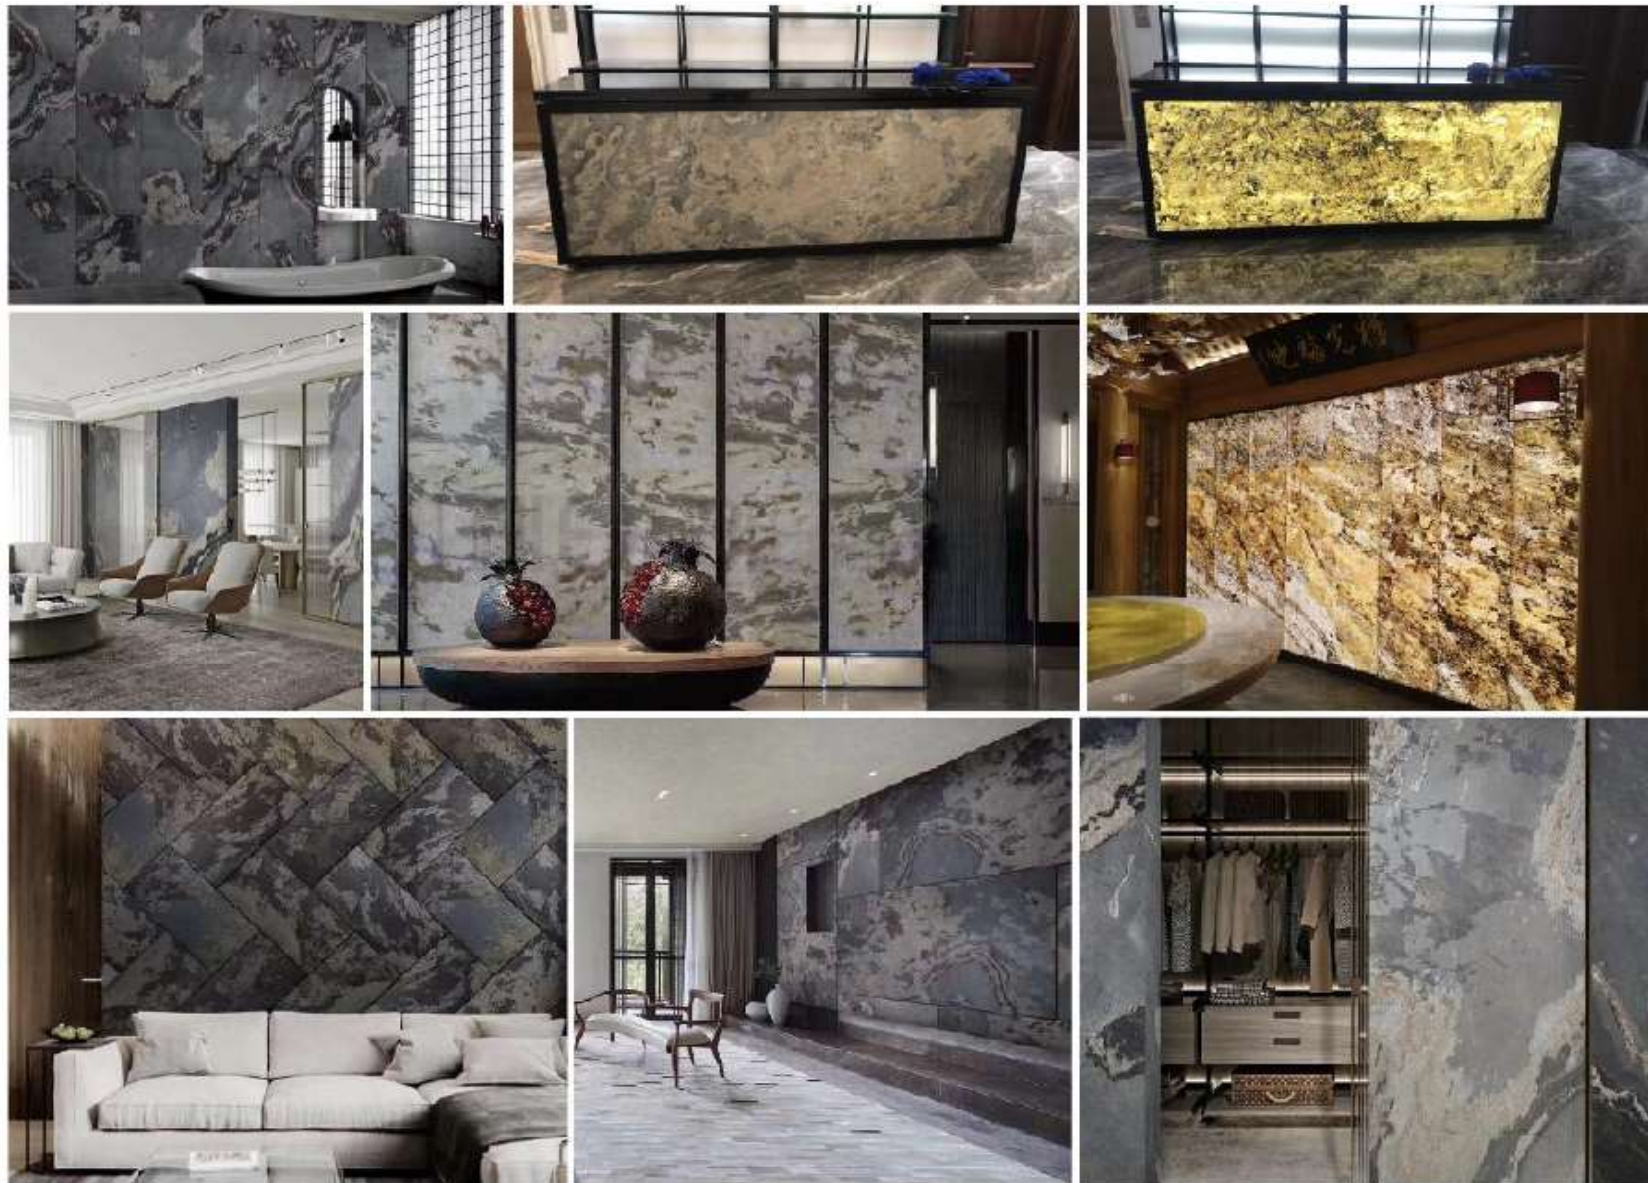

1. Steel Stone saw blade 2mm
2. Material consumption to be calculated before cutting
3. Make sure the construction surface is level, dry, clean, and dust free.

Use a planer to make the incision smooth. If there are cracks or uneven parts, use the abrasive paper to remove them.

You can use structural glue or other commercial adhesive, however do not apply the glue too close to the surface to avoid overflow.

Make sure you fix the surfaces with minimal joint gaps as possible.
