Introduction

Fusion wallboard is made of bamboo and high polymer materials by high temperature extrusion and film covering which is a new type of environmental protection material.

It is made of natural materials; the wood processing does not contain formaldehyde and other harmful adhesives.

Characteristics include being moisture-proof, flame retardant, sound insulating. It is non-toxic, easy to cut and easy to maintain

Features include plate buckle splicing, convenient installation, strong functionality, high quality appearance, and huge variety of styles and colors

Note: Do not fold edge. Can be Opened/Cut

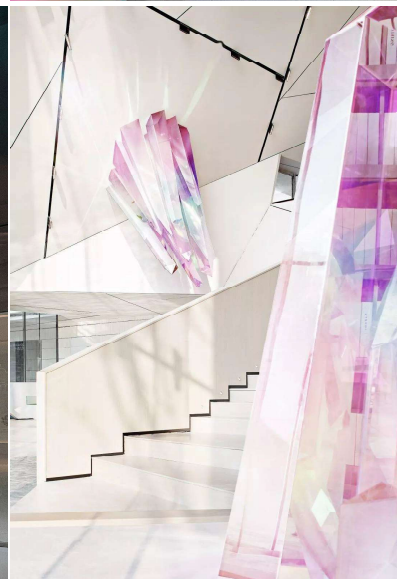

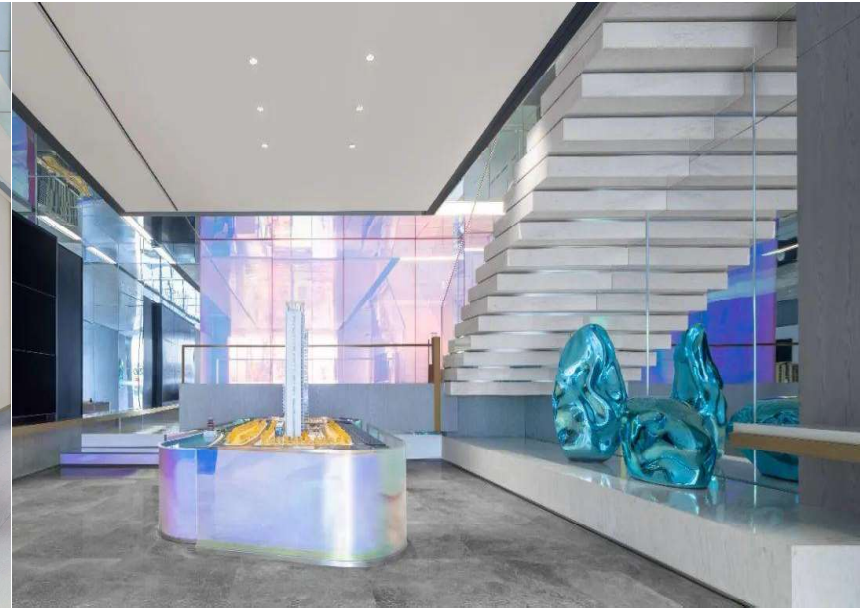

Installation

Please ensure the wall is clean, smooth, and the surface is level. The board can be installed directly on the blank wall, but the smoother the wall is, the more beautiful the installation will be.

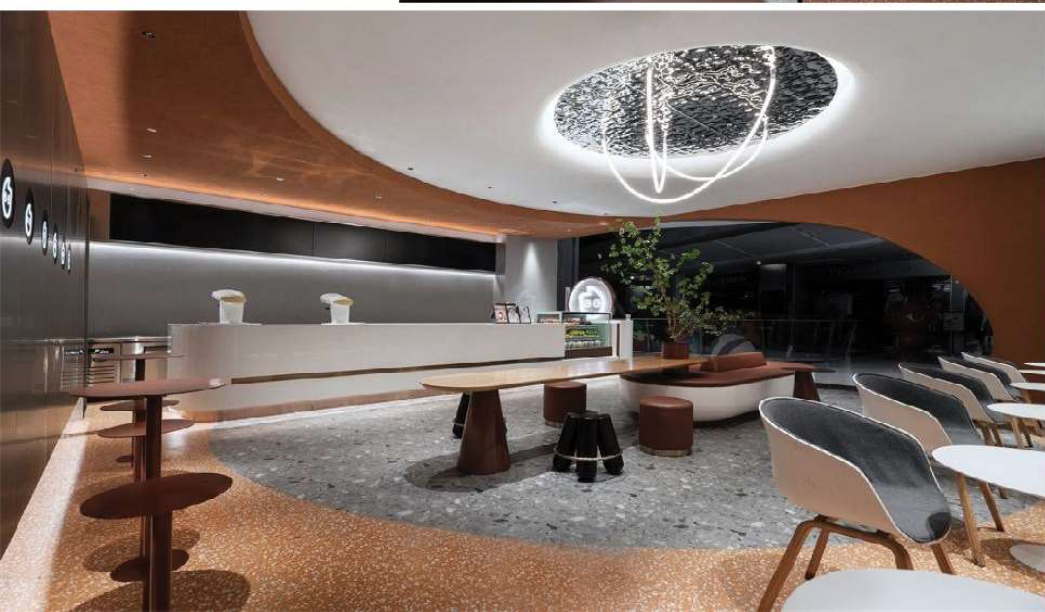

Before the panel installation, you should first design the block size, especially when considering 45 degrees angles. This will help in minimizing joints and wastage.

Using structural adhesive, make sure the glue is evenly coated on the back of the wallboard.
