The City of Boerne has a Cross Connection Control and Backflow Prevention program as required per Texas Commission on Environmental Quality (TCEQ). As a part of this program, an appropriate backflow prevention assembly must be installed on any water system plumbing where there is a potential for contaminants to backflow into the City's drinking water system (i.e., automatic lawn sprinkler systems, swimming pools, etc.).

The reason you are receiving this email is because the City does not have a backflow prevention assembly test report on file for your address. Per TCEQ regulations, the City must have at least one record of a passing test on file for each assembly installed. **We respectfully request that you provide the required passing test report(s) within thirty (30) days.**

If you have test records from previous tests, please forward a copy to our office. If no records exist, you will need to acquire a Backflow Prevention Assembly Tester (BPAT) to accomplish this testing. A list of approved testers is attached for your reference.

If you **do not** have any water systems which require a backflow prevention assembly, please contact our office at 830-248-1538 or you can email us at backflowprevention@boerne-tx.gov and we will update our records accordingly.

Thank you for your prompt attention to this matter.
