PLANTING GUIDE

Fall Digging/Transplanting High Risk Advisory

Tuckahoe Nurseries Inc. recognizes the potential risks involved with the Fall digging of some plant varieties. Each genus and species have distinctly different timing and other factors involved in regards to when they are deemed to be dormant.

Numerous risk factors related to the success and potential failure of specific plants to survive the transplanting process in the Fall season abound.

Some of these factors include, but in no way are limited to the following:

- THE ABILITY OF THESE PLANTS TO ESTABLISH NEW ROOT SYSTEMS
- THE TIMING OF THE PLANTING (E.G. SEPTEMBER VS. NOVEMBER)
- EXTENDED OR EXTREME DROUGHT CONDITIONS
- GEOGRAPHIC AREAS AND / OR MICROCLIMATES
- IRRIGATION OF PLANTS AFTER INSTALLATION
- EXTREME WEATHER CHANGES AT THE ONSET OF WINTER

Excellent cultural practices and maintenance by the purchaser can reduce these risks significantly and result in successful Fall transplanting.

Fall Digging High Risk Plants

The following varieties are considered by Tuckahoe Nurseries Inc. to be "FALL DIGGING HIGH RISK" plants, and as such assumes no responsibility for the survival of these items when dug during the Fall season.
