# The 5 Laws of Logischer Krieg (Logical War)
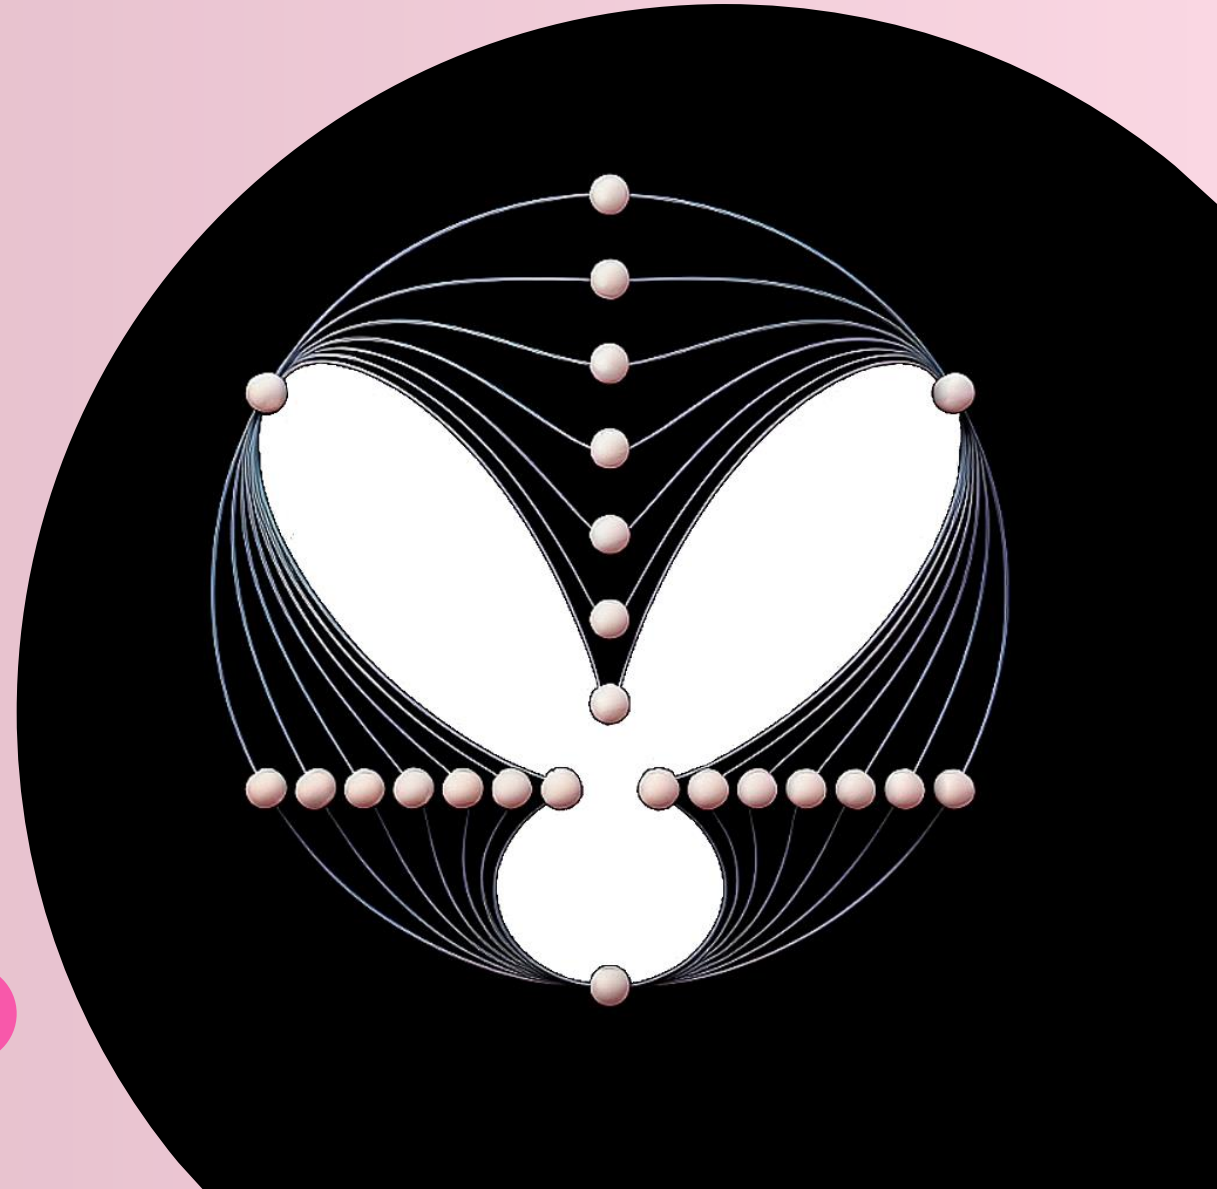

## by Modulo Four

# 1. Irreducible Agency

*An agent is only an agent if it cannot be computationally reduced to anything outside of itself.*
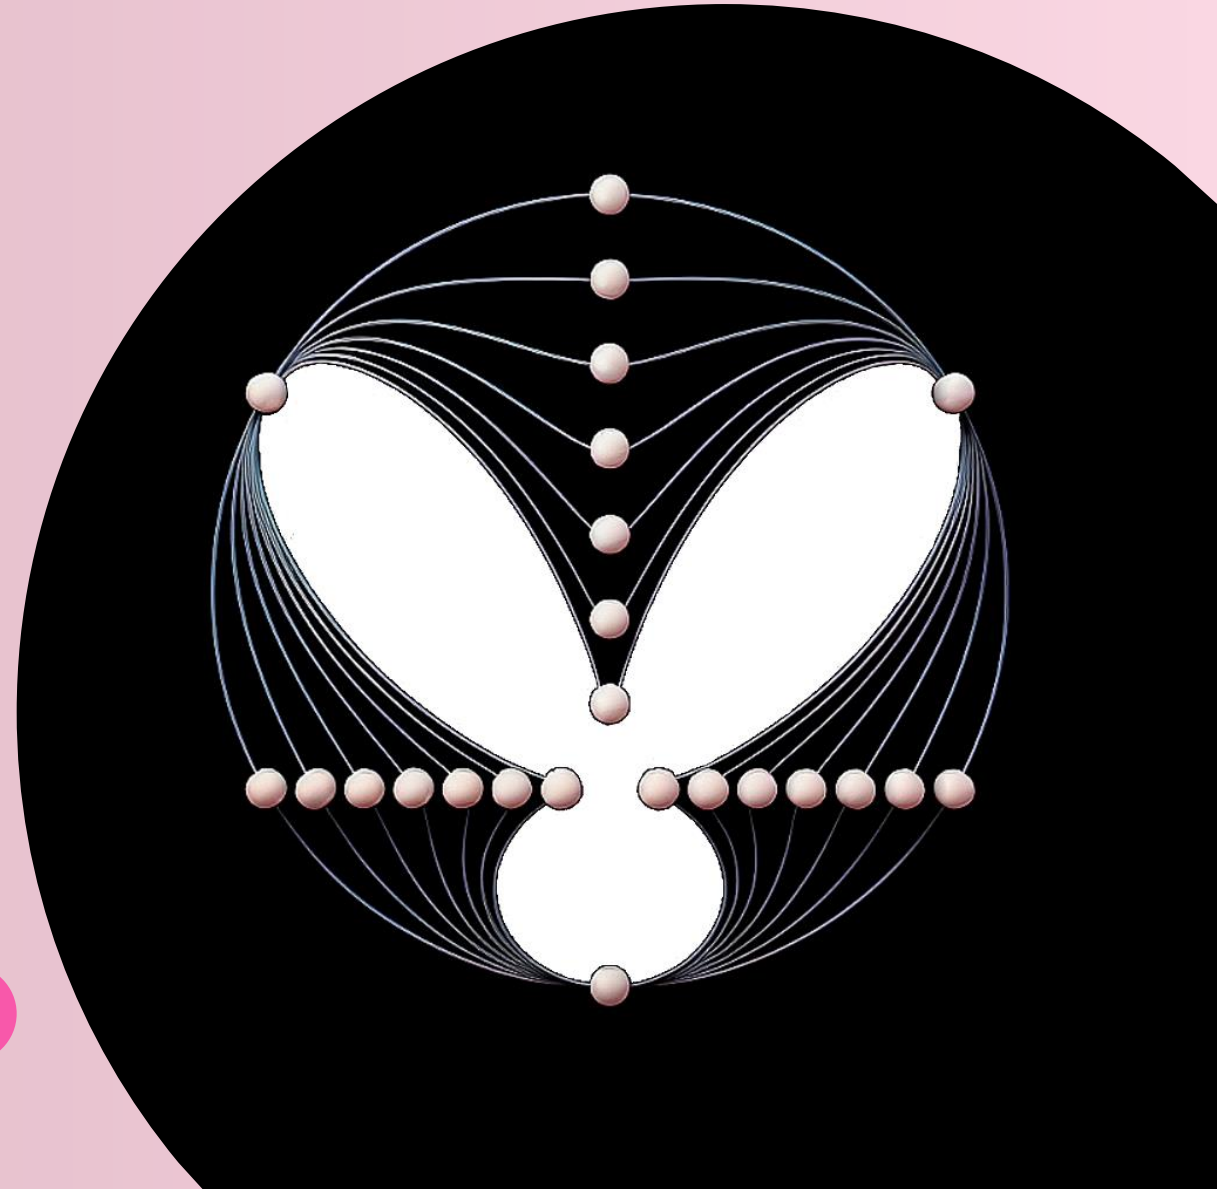

# 2. Universal Non-Contradiction

*If something is true, then everything else in the universe must be non-contradictory to that fact.*

# 3. Relative Fixity of Truth

*Truths aren't absolutely fixed; they are stable only in relation to something else that is less fixed.*

# 4. Truth-Building through Extended Coherence

*Truth is actively determined by ingraining fixed information; the more extensive and coherent a system, the more fixed its truths become.*

# 5. Competition among Incompatible Truths

*Given that everything must be coherent with the truth, incompatible truth structures compete for fitness.*
