# Happy Monday!

Welcome to the 56th issue of CSW.
In this issue:

**UK Warns of AI Prompt Injection Attacks**

**The Secret Habits of Top CISOs**

**New Exploit for VMware SSH Auth Bypass**

**And much more...**

## UK Warns of AI Prompt Injection Attacks

Chatbots such as Chat-GPT or Bard are facing a massive challenge, which is to prevent prompt injection attacks. Such attacks have been able to gain access to API keys allowing DDoS attacks.

## New Exploit for VMware SSH Auth Bypass

Proof-of-concept exploit code has been released for a critical SSH authentication bypass vulnerability in VMware's Aria Operations for Networks analysis tool. The flaw was found by security analysts at ProjectDiscovery Research and patched by VMware on Wednesday with the release of version 6.11.
