[OpenAI unveils cybersecurity platform](#)

[RomCom used for geopolitical attacks](#)

and much more...

How a hacker caused a cheese shortage

One of the funnier hacks in 2021 was when Matveev allegedly caused a Dutch cheese shortage, when he struck Bakker Logistiek, a logistics provider. Key IT systems were crypto-locked, causing a disruption of Dutch supply chains and leaving cheese counters bare. The attack temporarily disrupted supplies of many types of cheese, biscuits and other food products nationwide.

OpenAI unveils cybersecurity platform

OpenAI has launched a \$1 million cybersecurity grant program to boost defender-focused research and capabilities. Projects include collecting and labeling data from cyber defenders, detecting and mitigating social engineering tactics, automating incident triage, and identifying security issues in source code.

RomCom used for geopolitical attacks

Recent attacks by Void Rabisu indicate that it is now using a backdoor called RomCom, suggesting a shift in motivations from previous ransomware operations. Since October 2022, the group's goals of this appear to have moved from monetary benefits to geopolitical espionage. The goal of the attack is to lure victims to RomCom sites.
