

Happy Monday

Welcome to the 48th issue of CSW.

In this issue:

Hacks Targeting British Exam Boards

How to Create a Culture of Continuous Cybersecurity Improvement

British Government was Hacked by Foreign Cyber Spies 20 Years Ago

And much more...

Hacks Targeting British Exam Boards

Each year over 1 million UK students take part in exams. Which for some hackers is a large pool of potential customers. While most are simply scams, and do not have actual access to exam papers, there are a few who do succeed in gaining access.

Whats a cybersecurity worker's

favourite party?

A CISCO Party.

How to Create a Culture of Continuous Cybersecurity Improvement

Regulatory compliance and cybersecurity improvement are distinct pillars that demand specialized attention. Achieving compliance does not create an impenetrable fortress against threats; it merely creates a baseline defense.

British Government was Hacked by

Foreign Cyber Spies 20 Years Ago

The 20th anniversary of GCHQ's first cyber attack on the British government is celebrated. In 2003, the agency's Communications-Electronics Security Group (CESG) discovered malware on a government employee's device, which was designed to steal sensitive data.
