Microsoft Teams Phishing Attack

A new phishing campaign is abusing Microsoft Teams messages to send malicious attachments that install the DarkGate Loader malware.

The campaign started in late August 2023, when Microsoft Teams phishing messages were seen being sent by two compromised external Office 365 accounts to other organizations.

Apple Patches Zero Day Flaw

Apple on Thursday released emergency security updates for iOS, iPadOS, macOS, and watchOS to address two zero-day flaws that have been exploited in the wild to deliver NSO Group's Pegasus mercenary spyware.

The issues are described as below -

- **CVE-2023-41061** - A validation issue in Wallet that could result in arbitrary code execution when handling a maliciously crafted attachment.
- **CVE-2023-41064** - A buffer overflow issue in the Image I/O component that could result in arbitrary code execution when processing a maliciously crafted image.
