And much more...

University of Manchester Cyber Incident

The University of Manchester, a UK's largest university, has been hit by a cyber incident involving hackers accessing and likely copying data. The university's internal team and external support company have not yet confirmed the data accessed.

Tech Joke of the Week

Everyone is an atheist until they have to update their BIOS.

New York Sues Kia and Hyundai

In the first four months of 2023, Hyundai and Kia cars were stolen 977 times in New York City. The Big Apple filed a lawsuit against Hyundai's US subsidiaries, alleging that their failure to implement modern security controls has created a public nuisance.

Google Launches Framework to Secure Generative AI

Generative AI is rapidly advancing, but malicious use is increasing. Google has introduced the Secure AI Framework (SAIF) to help secure AI technology. SAIF focuses on six core principles: expanding security foundations, extending detection and response, automating defenses, harmonizing platform-level controls, adapting controls, and contextualizing AI system risks.
