

Cisco Hit by Cyberattack

A Cyberattack hit Cisco back on May 24th and they have recently released details regarding the attack. The hacker group Lapsus\$ is said to be responsible after it released a list of files onto the dark web gained from the attack using a Yanluowang ransomware. Cisco claims none of the files contain sensitive data.

What is Yanluowang Ransomware?

Powershell is used to download tools onto compromised systems, this allows them to undergo a more in depth reconnaissance of the system. Hackers then gain access usually with ConnectWise which allows them to use tools to gain credentials, such as: GrabFF, GrabChrome and BrowserPassView.

Tech Joke of The Week

Why did the boy get fired from his keyboard factory job?

Because he wasn't doing enough shifts.

Microsoft Blocks UEFI Bootloaders Enabling Windows Secure Boot Bypass

This would allow some third-party bootloaders to execute unauthorised code before the operating system loads. The status of many bootloaders is unknown if they are vulnerable or not.
