

# Happy Monday!

Welcome to the 22nd issue of CyberSec Weekly. This week's quick summary is:

[Hack The Box raises \\$55 million](#)

[Quantum safe cryptography](#)

[NortonLifeLock reveals hackers breached password manager accounts](#)

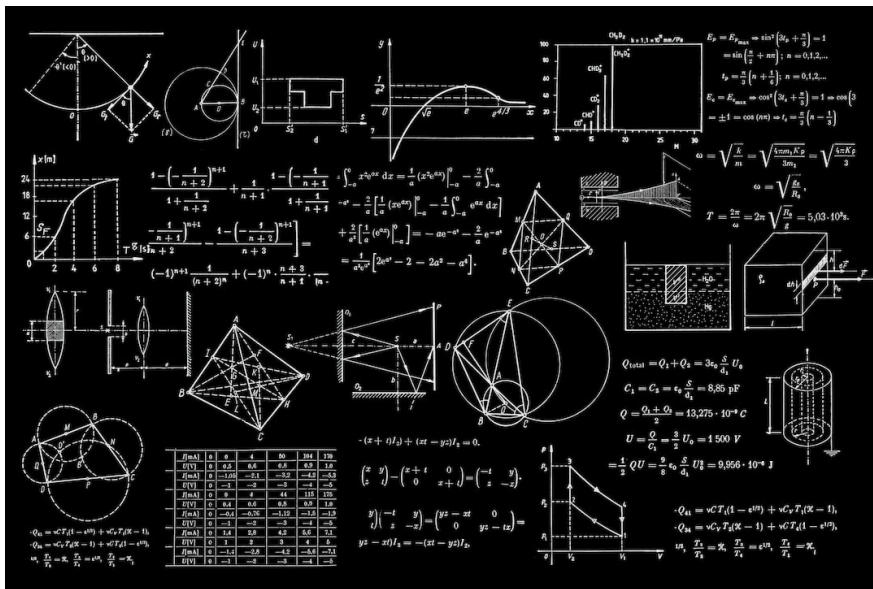

## Hack The Box Raises \$55 Million

Hack The Box, one of the startups that's built a platform to help cultivate more of the latter group with a gamified approach, is announcing \$55 million in funding to expand its business after racking up 1.7 million users.

The funding is being led by Carlyle, with Paladin Capital Group, Osage University Partners, Marathon Venture Capital, Brighteye Ventures and Endeavor Catalyst Fund also participating.

## Chinese researchers claim quantum technology is reaching a point where a quantum device will soon be able to crack RSA 2048 public key encryption

Just weeks after US president Joe Biden signed into law the Quantum Computing Cybersecurity Preparedness Act, there are reports that Chinese researchers have cracked RSA 2048 bit encryption.

Given that quantum computers offer the ability to push computational boundaries, such as solving intractable problems such as integer factorisation, which is used for public key encryption, the US government aims to encourage the migration of Federal Government IT systems to quantum-resistant cryptography.

## Joke of the Week

A SEO couple had twins...

For the first time they were happy with duplicate content.

## NortonLifeLock warns that hackers breached Password Manager accounts

Gen Digital, formerly Symantec Corporation and NortonLifeLock, is sending data breach notifications to customers, informing them that hackers have successfully breached Norton Password Manager accounts in credential-stuffing attacks.

According to a letter sample shared with the Office of the Vermont Attorney General, the attacks did not result from a breach on the company but from account compromise on other platforms.

"Our own systems were not compromised. However, we strongly believe that an unauthorized third party knows and has utilized your username and password for your account," NortonLifeLock said.
