

# Happy Monday!

Welcome to the 32nd Issue of [CyberSec Weekly](#).

In this Issue:

Lab 1 Decodes Dark Web Data to Uncover Hidden Supply Chain Breaches

Google finds 18 zero-day vulnerabilities in Samsung Exynos chipsets

How the Best CISOs Drive Operational Resilience

This weeks recommendation: Flipper Zero

## Lab 1 Decodes Dark Web Data

You may not think of your supply chain as a source of cybersecurity risk, but you should. 53% of organisations have had a data breach caused by third party information theft, according to Ponemon Institute.

Data breaches can and do spread outside the perimeter of your business. That's the insight that drives the Lab 1 platform. In an interconnected business, the tools you use, the agencies you hire, and the subcontractors you use to perform everyday business are all potential vectors of attack.

## Google Finds 18 Zero-Day Vulnerabilities in Samsung Exynos Chipsets

Project Zero, Google's zero-day bug-hunting team, discovered and reported 18 zero-day vulnerabilities in Samsung's Exynos chipsets used in mobile devices, wearables, and cars.

The Exynos modem security flaws were reported between late 2022 and early 2023. Four of the eighteen zero-days were identified as the most serious, enabling remote code execution from the Internet to the baseband.

These Internet-to-baseband remote code execution (RCE) bugs (including CVE-2023-24033 and three others still waiting for a CVE-ID) allow attackers to compromise vulnerable devices remotely and without any user interaction.

## How the Best CISOs Drive Operational Resilience

The last three years have been fueled by turbulent change — especially when it comes to an organization’s tech structure. The unanticipated global pandemic drastically accelerated digital transformation (DX) and a borderless workforce, forcing businesses to fast-track projects they had previously scheduled to take years. These years-long projects began to be completed in the matter of months, or even weeks, and propelled the industry forward momentarily, but also highlighted that cybersecurity must be interwoven in the fabric of those transformations to build operational resilience.

During this time, cybersecurity transformed into a competitive advantage for organizations, not just a cost center — leading many boards of directors to start paying closer attention to security investments and metrics, and prioritizing results.
