

# Happy Monday!

Welcome to the 54th Issue of CSW.

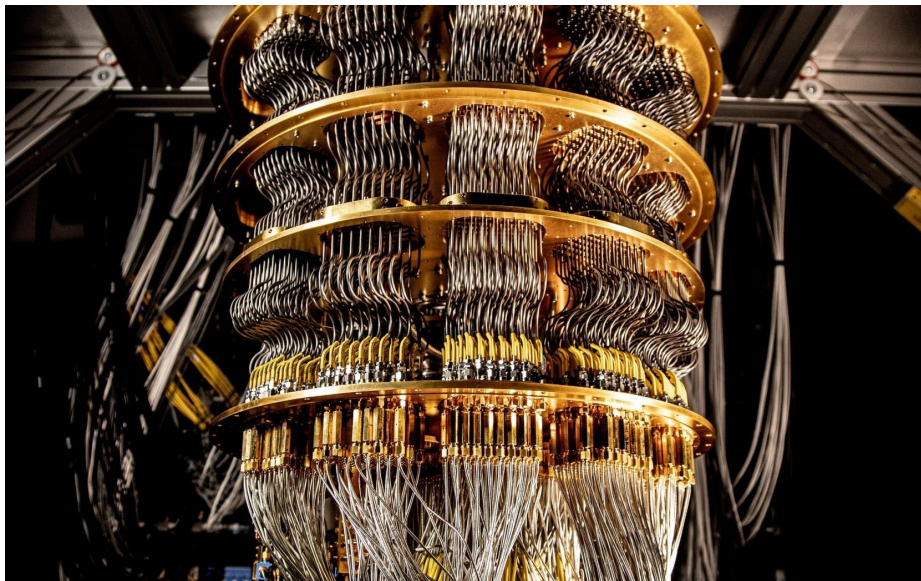

In this issue:

**Google Introduces First Quantum Resilient FIDO2 Security Key Implementation**

**Netscape: The Company that Changed Web Security Forever**

**Foreign Intelligence Entities Eyeing US Space Agencies**

And much more...

## **Google Introduces First Quantum Resilient FIDO2 Security Key Implementation**

Google is hoping that their latest innovation (or a variation of it) can be implemented to help prevent security risks surrounding quantum computers. The tech giant, who created this in combination with ETH Zurich, announced it as part of its OpenSK security keys initiative.

## **Netscape: The Company that Changed Web Security Forever**

The internet was growing fast, from 1990 the number of internet users had gone from 2.6 million to almost 10 million worldwide, and with this increase came a large number of growing pains. Fortunately Netscape had a plan.

# Foreign Intelligence Entities Eyeing US Space Agencies

US intelligence agencies are worried about foreign entities attempting to steal data from private space companies such as SpaceX. It has been suggested that China and Russia may be among these entities.
