A system for surrendering a baby includes a receptacle defining a space large enough to contain a baby. The receptacle includes a front located on an exterior wall of a building and an opposing back accessible from the interior of the building. An exterior door is arranged in the front and a second door is located in the back and sized to allow a baby to pass out of the receptacle. The system includes a multi-level alarm system arranged to activate when the baby is placed in the receptacle, the multi-level alarm system including a first alarm that is actuated upon opening of the exterior door and a second alarm that is actuated when the baby is placed in a medical bassinet located in the receptacle. When the exterior door is opened the first alarm sounds and when the baby is placed in the medical bassinet the second alarm sounds.
