

Press Release – Operational Solutions Ltd	Release Date:	
Operational Solutions Ltd announce development partnership with Carmenta Geospatial Technologies	01/02/2021	

Today, Operational Solutions Limited (OSL) announces its latest partnership with Carmenta Geospatial Technologies. The two companies have partnered with the aim of driving innovation and cutting-edge research in the Counter Unmanned Aerial Systems (C-UAS) market.

The announcement follows on from a recent joint project between the two companies in which OSL’s latest product, the Siting Tool, was developed. The Siting Tool allows the user to visualise a 3D Map of their chosen site with an overlaid C-UAS sensor coverage, and more. The tool gives the user the unique benefit of seeing their C-UAS coverage area, in a 3D environment, prior to physical installation or site testing.

Matt Maskell, Development Manager of OSL, said: “Carmenta are world-leaders in geospatial technology and have been building mission-critical systems for over 30 years, supplying and delivering reliable, innovative, high-performance software components and services. Having collaborated with Carmenta on recent projects we feel a partnership was a natural, and obvious, progression. We are very proud to be partnering with Carmenta during these exciting and innovative times for the C-UAS industry.”

David Sparks, Account Manager for Carmenta Geospatial Technologies UK, said: “Operational Solutions Limited are market leaders and experts in C-UAS across the aerospace and defence sectors, and we are very excited to be partnering with them to bring new products to the market”.

For more information on C-UAS & UTM systems please visit our website.
