

### **Entravision Communications Corporation (EVC)**

Valuation Update Reaffirms \$7 Price Target, While Scenarios Suggest Big Swings; Reaffirm Buy

James Dix, CFA

(1) 917 292 4293

james.dix@industrycapitalresearch.com

Midway through what was supposed to be a recession year, and may still be, with a new CEO taking the helm, we update our valuation for EVC, and double-click on a few valuation scenarios. We've long thought investors insufficiently consider extreme outlooks, good and bad, and this is an attempt to see broader horizons. To wit, if all digital scenarios we consider broke favorably, it could add over \$300m or \$4/share to EVC equity value, but if unfavorably, over \$200m or roughly \$3/share would be at risk, we estimate (see Fig. 6).

After updating our recurring valuation analysis, our price target is unchanged. In our discounted cash flow analysis, higher interest rates push up our risk free rate assumption and market conditions reduce our equity risk premium, while our updated beta assumptions are notably higher for EVC shares, but lower for its digital media comps (see Fig. 2). Although time is growing shorter for the onset of a recession in 2023, we still base our valuation on a 50% chance of a recession that would reduce our 2023/24 adjusted EBITDA estimates by ~7% (see Fig. 3-5).

Over the past two years, EVC's digital businesses, both in media representation and in its own platforms (e.g., Smadex and its demand-side platform), have seen substantial surprises in both their revenue and margin outlooks. Looking at our 2022-26 forecasts, 1) our EVC Latam revenue is roughly 6% higher but OCF margins ~160bps lower (see Fig. 8-9); 2) our EVC Asia revenue is over 40% higher but OCF margins ~350bps lower (see Fig. 11-12); and 3) our EVC legacy digital revenue has more than doubled and its OCF margins are ~350bps higher (see Fig. 14-15). The net of these changes has been to leave our OCF forecasts on balance slightly lower for EVC Latam and Asia (see Fig. 10 and 13), but notably higher for EVC's legacy digital business (see Fig. 16). Currently, our 5-year forecast OCF CAGRs of 21% for legacy digital and 17% for EVC Latam and EVC Asia remain well above our forecast EBITDA CAGR for EVC as a whole (see Fig. 2 and 17).

Our digital valuation scenarios consider sizes of revenue and margin surprises that are generally consistent with what we have seen the past two years. See Fig. 6. Specifically, we consider: 1) for EVC Latam, revenue +/- 10% and OCF margins +/- 150bps vs. our forecasts, 2) for EVC Asia, revenue +40%/-20% and OCF margins +/- 350bps vs. our forecasts, and 3) for legacy digital, revenue +100%/-50% and OCF margins +/- 350bps vs. our forecasts.

Our TV scenario focuses on risk rather than reward, in particular to the amount of retransmission revenue after the current network affiliation agreement expires at the end of 2026. We estimate EVC will receive \$37m in net retransmission revenue this year (see Fig. 18), and even though we do not see this growing much, a new affiliation agreement without it (admittedly a worst case) could put at risk ~\$100m of equity value, or ~\$1 per share (see Fig. 6), basically the value that we currently attribute to EVC's broadcast business (see Fig. 29).

Maintain \$7 per share 12-month price target and Buy rating; risks on page 2. Our PT is supported by a DCF valuation based on explicit financial forecasts through 2028 (see Fig. 27-29).

Update July 7, 2023

### Investment Thesis and Valuation: Buy With \$7.00 Price Target

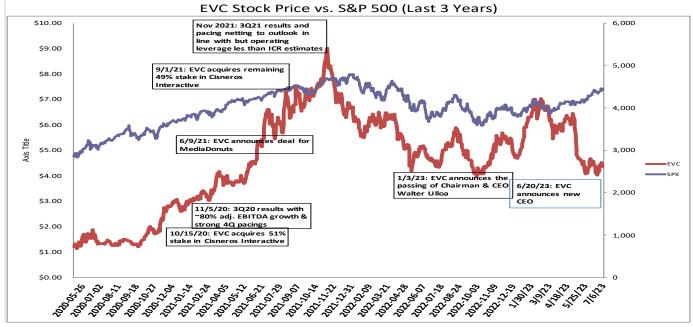

Positives supporting our Buy rating include: 1) EVC's share price is not fully capturing the potential of digital media acquisitions because their higher growth and different business models are more difficult for investors to assess; 2) higher post-pandemic broadcast margins, stability of TV retransmission revenue (35% of 2022E EBITDA) and secular growth of political advertising revenue (31% of 2022E EBITDA), and potential monetization from future spectrum auction (as in 2017) reduce the operating risk profile of overall business; 3) pro forma net debt leverage under 2x and double-digit free cash flow yield will give new senior management flexibility to increase returns of capital and continue accretive digital acquisitions; and 4) our DCF valuation supports substantial stock price upside over the next 12 months, particularly if there is no recession.

Our DCF-based 12-month price target is a weighted average of projected equity valuations at year-end 2023 and 2024; our PT assumes a 50% chance of a base case with ~\$89m in 2023 EBITDA and a 50% chance of a recession with ~\$83m in 2023 EBITDA, resulting in our target valuation. In structuring our DCF, first we adjust the current net debt for the value of any estimated payments remaining on the acquisitions (e.g., earnouts) and noncontrolling interest. Second, we adjust the current net debt by the estimated free cash flow to be generated by each valuation date. Finally, we value EVC both using a weighted average cost of capital (WACC) reflecting its own stock price trading and using separate WACCs for its broadcast and digital media businesses based on sector comparables, applied to separate free cash flow forecasts for each of these businesses. The results of these two methods set the range for our valuation, with the EVC-specific method incorporating market data on EVC shares' actual volatility setting the upper bound, and the sector method relying on measures of risk of comparables setting the lower bound. Note that in our DCF, for our terminal value estimates, we assume that capex equals D&A, which results in a substantially higher capex estimate than in our financial statement forecasts because capex should be like D&A for a terminal value forecast, to support the need for an asset base in perpetuity.

Risks to our investment thesis include: 1) impact of new incoming CEO and change in voting control on company's strategy and pursuit of potential longer-term options, including sale of all or a portion of the company, 2) sensitivity of EVC's advertising-based businesses to macroeconomic shocks, such as a recession, 3) potential volatility of EVC's digital media business, given its increasing focus on emerging markets, its dependence on a small number of commercial relationships with media tech platforms, and increasing competition, 4) secular challenges and potentially increasing competition from TelevisaUnivision for EVC's broadcast media business, and 5) risk-off market sentiment as an overhang for valuation of EVC's fast-growing, less mature digital advertising businesses.

### No Change to Our Price Target, Reflecting Macro Input Updates

No change to price target, despite changes to macro inputs. As summarized in Fig. 2, the changes to the macro inputs to our DCF are not big and the impact of higher interest rates is offset by a lower equity risk premium. There is a meaningful increase in EVC's beta and thus the discount rate used for valuing the firm as a whole. This may reflect an increase in share price volatility as a result of the shift in EVC's asset mix to less mature digital businesses from the more mature broadcast business. However, we also do a sum-of-the-parts valuation that relies on separate sector beta estimates for the digital and broadcast businesses, and here we saw a decline in the sector beta and thus discount rate for the digital business. These changes in the betas in effect narrowed, but did not really shift, the valuation range for EVC's shares. We stick with the same recession assumptions (see Fig. 3-5), and thus our price target—based on a 50% chance of recession—remains unchanged.

Figure 2: Updated trading data boosts beta & cost of capital for EVC shares, but cuts them for its digital media comps; net-net, \$7 PT reaffirmed

Source: Industry Capital Research estimates and company data

With EVC shares in the doldrums, trading at less than half their peak over the past two years (see Fig. 19), we want to drill down on the value drivers in the business. Our stethoscope is our model, which has explicit assumptions for EVC's key digital and broadcasting businesses out to 2028, and feeds into our DCF valuation (see Fig. 24-29). Although most of our investor conversations about valuation center on operating estimates (usually adjusted EBITDA) and multiple assumptions, these rules of thumb are less useful—or at least precise—when analyzing what could go right or wrong with EVC's underlying business.

Our base model is grounded in our expectations; the scenarios presented here are attempts to quantify potential surprises. EVC's digital transformation has not only introduced much higher revenue growth into its business, but also a fair amount of volatility. We first describe the key digital businesses we assess in our scenarios: Entravision Latin America (EVC Latam), Entravision Asia (EVC Asia), and the legacy digital business, which consists of the operations in EVC's digital segment acquired prior to 2020. Then we provide color on the scenarios and results summarized in Fig. 6.

Note: Legacy digital is EVC's digital segment excluding acquisitions since 2020. Source: Industry Capital Research estimates and company data

#### EVC Latam: lynchpin of the digital media representation business

The crown jewel of EVC Latam's digital representation business is its representation of Meta across much of Meta's Latin American footprint. Not only is EVC Latam by far EVC's largest digital business, accounting for over half of EVC's digital segment revenue and OCF (see Fig. 7), but we infer from EVC's SEC filings that Meta representations account for over half of EVC's digital revenue, largely on the strength of Meta's business with EVC Latam. A meaningful part of the value of a representation to EVC is the scale and quality of the partner, and here Meta offers key advantages through the vast global scale of its social networks, its high retention of advertisers, and the quality of the campaign data and support which Meta makes available to those advertisers. The relationships of the Cisneros family, well known in Latin America, were likely a factor in building the Cisneros Interactive business, which EVC acquired in 2020 to become EVC Latam. Relationships can be particularly valuable in winning mandates for branding campaigns.

Our initial expectations for EVC Latam (Cisneros Interactive at the time) reflected much of the surge in business that it was already seeing from the impact of expanded credit lines from Meta in the wake of EVC's acquisition. This factor contributed to the enormous growth EVC Latam has seen, to an annual run-rate of over \$500m in revenue now from under \$200m when it was acquired in 2020.

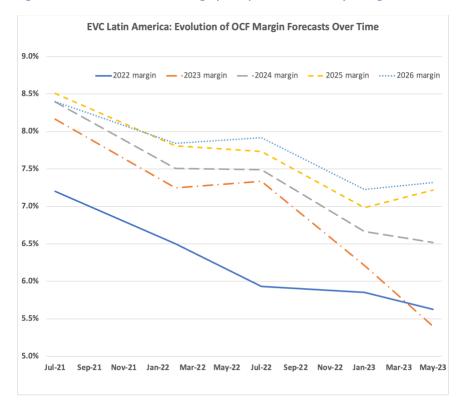

Figure 8: Our 2022-26 revenue forecasts for EVC Latin America are roughly 6% higher than two years ago

Source: Industry Capital Research estimates and company data

Our revenue forecasts for EVC Latin America have on balance moved up, so that our 2022-26 revenue forecasts for EVC Latin America are roughly 6% higher than they were two years ago (see Fig. 8). Our peak revenue forecasts for all years were in early

2022, just after the initial surge in business as EVC Latam expanded its credit lines with Meta. The upside surprise to our EVC Latam estimates over and above this surge has reflected primarily the quality of EVC Latam's execution. Indeed, we believe that on the strength of what EVC Latam has been delivering for Meta, Meta has been opening new markets to EVC outside of Latam (e.g., the Iceland and Mongolia representations announced earlier this year).

Figure 9: Our 2022-26 OCF margin forecasts for EVC Latam are roughly 160bps lower than two years ago

Source: Industry Capital Research estimates and company data

On the other hand, our operating cash flow (OCF) margin forecasts for EVC Latam have trended down for all years, and our 2022-26 OCF margin forecasts for EVC Latam are roughly 160bps lower than two years ago (see Fig. 9). Indeed, at present, we forecast slight OCF margin compression for EVC Latam in 2023 relative to 2022. The primary pressure on margins appears to be lower commissions from platform partners, as we discussed in our May 8 comment concerning disclosures in EVC's 1st quarter 10-Q.

Figure 10: Our 2022-26 OCF forecasts for EVC Latin America are roughly 17% lower than two years ago

Source: Industry Capital Research estimates and company data

Finally, our OCF outlook for EVC Latam has declined, as its better-than-expected revenue growth has been more than offset by reductions in our OCF margin estimates, so that our 2022-26 OCF forecasts are roughly 17% lower than they were two years ago (see Fig. 10). Our 5-year forecast OCF CAGR for EVC Latam has also declined, to 17% from 32% two years (see Fig.17).

#### **EVC Asia: riding the TikTok tiger**

**EVC** Asia's business is driven by representing TikTok and leveraging that platform's explosive growth, as well as having a good representation relationship with Twitter. We believe that an added strength of EVC Asia is the diversification of its advertiser base. Our revenue forecasts for EVC Asia have surged upward, and our 2022-26 revenue forecasts are roughly 43% higher than at initiation (see Fig. 11). By contrast, our OCF margin forecasts for EVC Asia peaked in early 2022, and are now 400-600bps lower than that peak, and roughly 350bps lower than two years ago (see Fig. 12). The result is that our OCF forecasts for EVC Asia, while lower than they were 12-18 months ago, are only marginally (3%) lower than they were two years ago (see Fig. 13). Similarly, our 5-year forecast OCF CAGR for EVC Asia has held relatively steady, at 21% now vs. 24% two years ago (see Fig. 17).

Figure 11: Our 2022-26 revenue forecasts for EVC Asia are over 40% higher than two years ago

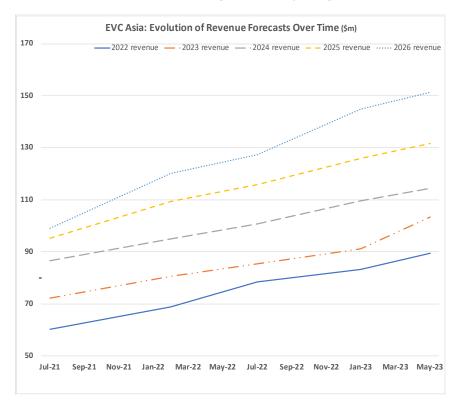

Figure 12: Our OCF margin forecasts for EVC Asia are roughly 350bps lower than two years ago

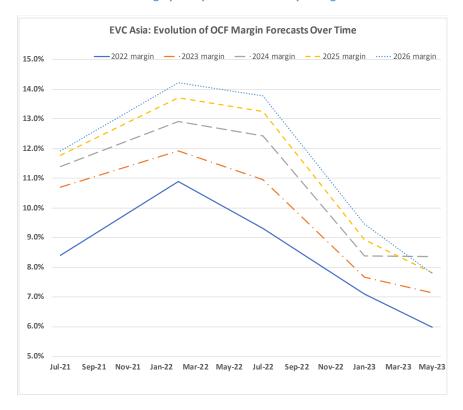

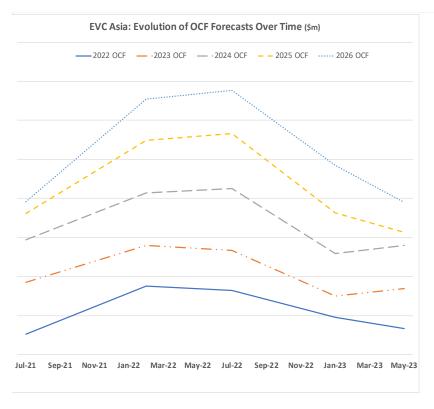

Figure 13: Our OCF forecasts for EVC Asia, while lower than they were 12-18 months ago, are only marginally (~3%) lower than two years ago

#### Legacy digital media: Smadex's expanding global demand-side platform (DSP) could be diamond in the rough

Over the past two years, the biggest driver of upside surprises in OCF outlook has been EVC's legacy digital business, driven by Smadex and its DSP. We estimate that Smadex accounts for well over half of the revenue of EVC's legacy digital business. Compared to the digital representation business, Smadex skews more to larger enterprises, particularly in the gaming vertical. We believe that, by geography, Smadex's business is roughly evenly split between developed markets, primarily Europe and the U.S., and emerging markets. While the OCF margins of the legacy digital business were higher than those of EVC Latam or EVC Asia last year, the legacy business does face some margin pressures, reflecting among other things the level of service needed by certain verticals, some of which run rather data-intensive performance ad campaigns.

Our 2022-26 OCF forecasts for legacy digital are over 250% higher than two years ago (see Fig. 16), with legacy digital's OCF now higher than EVC Asia's (see Fig. 7). First, our revenue forecasts for the legacy digital business have rocketed upward until the beginning of this year, when headwinds in the fintech and crypto ad verticals slowed Smadex (see Fig. 14). Second, our OCF margin forecasts for the legacy digital business suddenly entered a new era in 2022, when what was expected to be a marginally profitable year vaulted to double digit OCF margins. As a result, our legacy digital 2022-26 OCF margin forecasts are roughly 350bps higher than two years ago (see Fig. 15). The combination of higher revenue and higher margin forecasts have driven the surging outlook for OCF at the legacy digital business.

Figure 14: Our 2022-26 revenue forecasts for EVC's legacy digital business are over double what they were two years ago

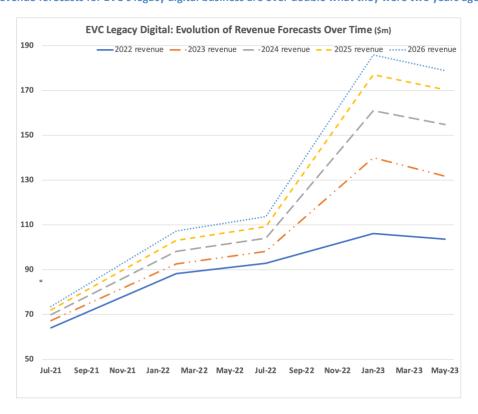

Figure 15: Our 2022-26 OCF margin forecasts for legacy digital are roughly 350bps higher than two years ago

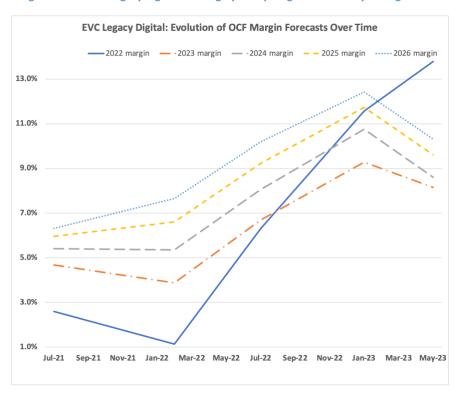

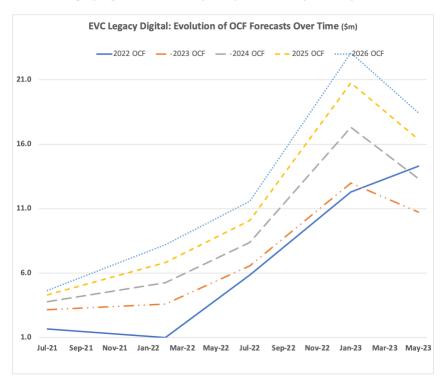

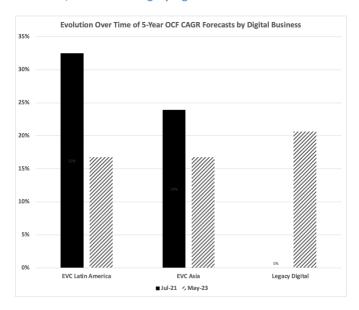

Figure 16: Our 2022-26 OCF forecasts for legacy digital have almost quadrupled over the past two years

Source: Industry Capital Research estimates and company data

Figure 17: Our OCF CAGR forecasts for EVC Latam, EVC Asia and legacy digital remain well above our forecast EBITDA CAGR for EVC as a whole

Update July 7, 2023

#### **Description of scenarios**

First, we give color on the digital media scenarios summarized in Fig. 6.

- The EVC Latam revenue sensitivity is the smallest by percent of the three digital businesses we analyze: even at 10%, it is a bit larger than the upside variance that we have seen of 6% over the past two years. The sheer size of the EVC Latam business makes big percentage variances in revenue less likely. There could be revenue upside in EVC's existing Meta markets from increasing the share of advertising placed through EVC as representative, rather than with Meta directly. Of course, client concentration can create risks to revenue, which EVC needs to manage.
- The EVC Latam margin sensitivity of +/- 150bps is in line with the variance that we have seen over the past two years. Although we have EVC Latam tracking to have lower margins than EVC Asia, we cannot rule out further margin compression, given the leverage Meta may have from giving EVC Latam so much business. One common dynamic for both EVC Latam and EVC Asia has been margin pressure in digital media representation, and the margin outlooks for both businesses have declined meaningfully over the past two years. Nevertheless, we believe that digital resellers like EVC could see higher margins as a result of competition among platforms in the same market or as a result of offering distinctive services, market expertise, or access to advertisers.
- For EVC Asia, our revenue sensitivity analysis of +40%/-20% skews to the upside, reflecting EVC Asia's strong growth trends, its representation of the fast-growing TikTok platform, and its potential to grow more off a smaller revenue base. The evolving structure of the digital representation business provides some stability, but also some opportunity to grow. EVC and Aleph are by far the largest digital resellers serving the global social networks and other emerging advertising platforms (e.g., Spotify). Given the rivalry between social networks, representing one in a territory may often effectively preclude serving another. In a sense, this can reduce the risk of losing a representation, even though these agreements are usually short-term in nature. However, there is no rule against representing more than one big social network in a territory, and Aleph, for example, exclusively represents both Meta and TikTok in Cambodia. This suggests that, for example, EVC Asia's representation of TikTok in certain markets might not preclude its picking up the presentation for Meta in those markets as well. On the other hand, TikTok is a less mature partner than Meta, and this could introduce downside risk as well as upside potential, leading to our -20% revenue sensitivity scenario.
- Our greater margin sensitivity range for EVC Asia—+/- 350bps—than for EVC Latam reflects the greater variance we have seen in our EVC Asia margin estimates, the fact that EVC Asia's business is at an earlier stage than EVC Latam's, and the relative immaturity of TikTok as an ad platform.
- The biggest revenue sensitivity range that we consider is +100%/-50% for the legacy digital business. This reflects our experience over the past two years, in particular the surge in growth at Smadex, and the potential for this momentum to continue, especially as Smadex further expands its distribution globally. As a platform in its own right, Smadex has fewer constraints on the partners and geographies with which it can do business than EVC's media representation business has. That said, Smadex is also more subject to competitive pressures and negative advertising trends, such as the downturn it has seen in fintech and crypto advertising over the past year, hence our consideration of a sizable 50% downside case.
- Because of the large upside surprise that the legacy digital business has seen in margin, we consider a sensitivity range that both continues the positive momentum (+350bps) as well as represents a reversal of trend (-350bps). Note also that the

Update July 7, 2023

legacy digital business has higher margins than EVC Latam or EVC Asia (see Fig. 7). We believe that advertiser mix may have a meaningful impact on the margins of a platform like Smadex, but not so much on the margins of EVC's media representation businesses.

We close by noting two other potential sources of growth upside for the digital representation business, sources that are not particular to any specific region per se.

First, EVC's global presence is now helping it compete for new markets, platform partners, and advertisers. In a number of markets, EVC's advertisers buy ads that run outside of the market, making EVC's advertiser relationships more global in scale than they first appear. In Vietnam, for example, over half of EVC's revenue comes from buys that run on platforms outside of Vietnam. This reflects, among other things, strong growth in Vietnam's e-commerce business, with one catalyst being the trend to dropshipping. Although other markets have less of this global advertising than Vietnam, we still believe that such advertising accounts for a meaningful share of the business of EVC Asia as well as EVC Latam. The global nature of the buys made by many of EVC's digital representation advertisers suggests potential synergies with even EVC's U.S.-based broadcast business, given that entrepreneurial advertisers in many emerging markets are already targeting potential customers in developed markets.

Second, we believe that there is still room for further consolidation of the digital resellers. One catalyst for M&A can be a perception by the seller that it needs to be part of a larger platform that can better compete for advertising from larger companies and companies outside the market. However, we believe that acquisition candidates are likely substantially smaller than the deals which EVC has done already, such as for Cisneros Interactive in 2020 and MediaDonuts in 2021.

#### **Scenario results and implications**

As summarized in Fig. 6, if all three key digital businesses—EVC Latam, EVC Asia and legacy digital (together accounting for over 90% of EVC digital segment revenue and OCF)—saw revenue and margin upside of the magnitude that they have seen in the past two years, we estimate that EVC could see incremental value of roughly \$300m, or \$4 per share. Of course, the margin upside in this case would largely be a reversal of the reductions in outlook we have seen the past two years, while the revenue upside would be in effect a repeat performance of the positive surprises that EVC Latam, EVC Asia and the legacy digital business have already delivered over the past two years.

As to downside risk, by contrast, if the digital businesses saw more negative surprises in OCF margin of the magnitude that we have seen the past two years, aggravated by reversals of fortune in revenue growth (i.e., future negative surprises of a similar magnitude as the positive surprises we have seen thus far), then EVC could see a value drain of roughly \$250m, or \$3 per share, by our estimates.

Source: Company reports; Industry Capital Research estimates

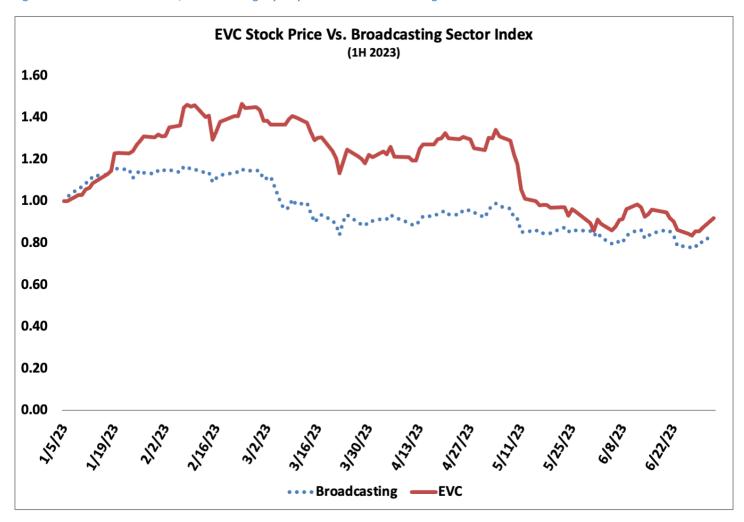

Finally, our scenario on the valuation impact of the potential loss of TV retransmission revenue after 2026 considers what would likely be a worst case, but nevertheless one whose impact on the stock is becoming more manageable as the contribution of broadcast to overall equity value (under 20% now, we estimate—see Fig. 29) continues to shrink. Less retransmission revenue could also reduce EVC's capacity to borrow for acquisitions, digital or otherwise, and we note that the digital pure-plays we use for sector comparables (see Fig. 21) have little to no leverage.

Figure 19: Over the past two years, EVC shares have outperformed a declining broadcasting sector

Note: Prices indexed to 1.00 based on closing price at 6/30/21. Broadcasting Sector Index is equal-weighted median of stocks in Broadcasting sub-sector of Communications Services sector. Source: Yahoo Finance, MSCI, S&P Global and Industry Capital Research

Figure 20: In the first half of 2023, EVC shares slightly outperformed the broadcasting sector

Note: Prices indexed to 1.00 based on closing price at 12/30/22. Broadcasting Sector Index is equal-weighted median of stocks in Broadcasting sub-sector of Communications Services sector. Source: Yahoo Finance, MSCI, S&P Global and Industry Capital Research

Figure 21: Over the past two years, EVC shares and the comparables we use to measure digital media sector risk have lagged the market

Selected Digital Media Comparables Stock Price Performance 6/30/21-6/30/23 Ticker						
Perion Network (PERI)	43.2%					
Meta Platforms (META)	-17.5%					
MercadoLibre (MELI)	-24.0%					
Median	-27.6%					
Entravision (EVC)	-31.2%					
PubMatic (PUBM)	-53.2%					
S4 Capital (SFOR.L)	-79.9%					
S&P 500	3.6%

Update July 7, 2023

#### **APPENDIX**

Additional information relative to securities, other financial products or issuers discussed in this report is available upon request.

#### COMPANY-SPECIFIC DISCLOSURES

The following disclosures relate to relationships between Industry Capital Research and the company covered by Industry Capital Research and referred to in the research report (the "Company").

The Company in this report is a participant in an issuer-paid research program by which Industry Capital Research receives compensation from the Company. Additional details of this program, including compensation rate information, are available at <a href="https://www.industrycapitalresearch.com">www.industrycapitalresearch.com</a>. No part of the Industry Capital Research compensation was, is, or will be directly or indirectly related to any specific recommendation or views expressed by the analyst in this research report.

Industry Capital Research and/or its affiliate(s) does not make a market in securities issued by the Company.

#### RESEARCH ANALYST CERTIFICATION

The analyses and recommendations expressed in this research report accurately reflect my personal views and true opinions about the subject securities or issuers. No part of my compensation was, is, or will be directly or indirectly related to any specific recommendations or views expressed in the research report and/or any public appearance.

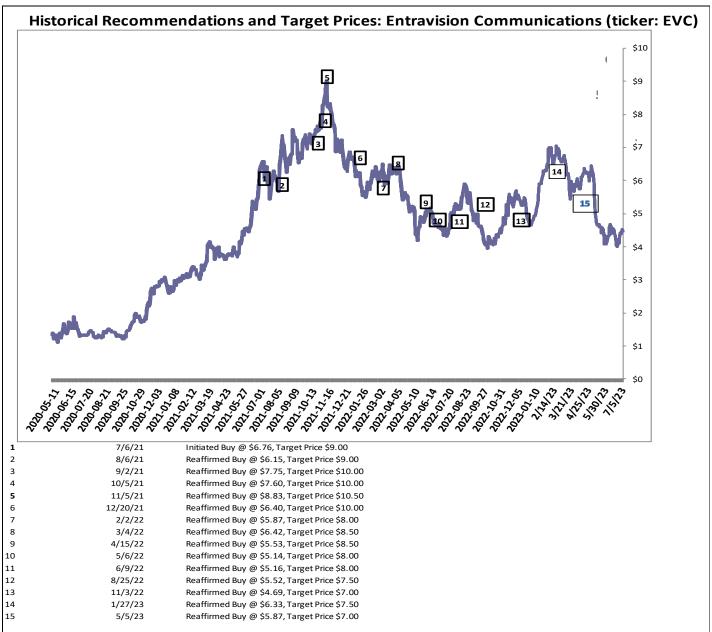

The author of this report (or a member of his/her household) has a direct ownership position in securities issued by the Company or derivatives thereof. No order that would have the effect of changing this position will be executed until five days after the release of this report.

#### ANALYST CREDENTIALS, PROFESSIONAL DESIGNATIONS, AND EXPERIENCE

The author, Director of Research at Industry Capital Research, is a CFA® charterholder who has 18 years of experience as an analyst at U.S. broker-dealers covering the media sector, was rated #2 Stock Picker in U.S. Media for 2016 by Thomson Reuters, holds a BA (Economics) and MBA from the University of Chicago and a JD from the University of Virginia, and is a member of the Beta Gamma Sigma and Phi Beta Kappa honor societies.

#### **CONTINUING COVERAGE**

Unless otherwise noted through the termination of coverage or change in analyst, the analyst who is the author of this report will provide continuing coverage of the Company through the publishing of research available through the Company and Industry Capital Research's distribution lists, website, and third-party distribution partners.

#### **Ratings Definitions**

BUY: total return expected is >15% over a 12-month period

HOLD: total return expected is between 15% and -15% over a 12-month period

SELL: total return expected is <-15% over a 12-month period

The target prices of shares mentioned in the accompanying text are based on the assumed investment horizon of 12 months. If company notes are published on these shares in the future, the target prices mentioned in the subsequent notes will have priority.

Update July 7, 2023

#### Global Disclaimer

The information and opinions in this report were prepared by Dix Consulting, LLC, a New York Limited Liability Company doing business as "Industry Capital Research" or one of its affiliates (collectively "Industry Capital Research"). The information herein is believed by Industry Capital Research to be reliable and has been obtained from public and non-public sources believed to be accurate and reliable, but Industry Capital Research does not represent that the information herein is accurate or complete, and it should not be relied on as such.

All statements or opinions contained herein that include the words "we", "us", or "our" are solely the responsibility of Industry Capital Research and do not necessarily reflect statements or opinions expressed by any person or party affiliated with the Company mentioned in this report.

Industry Capital Research may have published, and may in the future publish, other research reports that are inconsistent with, and reach different conclusions from, the information provided in this report. Industry Capital Research is under no obligation to bring to the attention of any recipient of this report any past or future reports.

Industry Capital Research, its officers, employees, and members of their households, or any one or more of them, and their discretionary and advisory accounts, may have a position in any security discussed herein or in related securities and may make, from time to time, purchases or sales thereof in the open market or otherwise. The author of this report will not cause to be executed any order that would change a position in a security of the Company discussed herein in a manner that is contrary to, or inconsistent with, the most recent published recommendations or ratings of Industry Capital Research.

Opinions, estimates and projections in this report constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Industry Capital Research and are subject to change without notice. Industry Capital Research has no obligation to update, modify or amend this report or to otherwise notify a reader thereof in the event that any matter stated herein, or any opinion, projection, forecast or estimate set forth herein, changes or subsequently becomes inaccurate, except if research on the subject Company is withdrawn.

This report is provided for informational purposes only. It is not to be construed as an offer to buy or sell or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy in any jurisdiction.

Investors should consider this report as only a single factor in making their investment decision. The financial instruments discussed in this report may not be suitable for all investors and investors must make their own investment decisions using their own independent advisors as they believe necessary and based upon their specific financial situations and investment objectives. Investors should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. This report is not to be relied upon as a substitute for the exercise of independent judgment. No judgment is hereby expressed or should be implied as to the suitability of any security described herein for any specific investor or any specific investment portfolio.

Prices and availability of financial instruments are subject to change without notice. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the price or value of, or the income derived from, the financial instrument, and such an investor effectively assumes currency risk. In addition, income from an investment may fluctuate and the price or value of financial instruments described in this report, either directly or indirectly, may rise or fall. Past performance is not necessarily indicative of future results, and a loss of capital may occur.

This report may not be reproduced, distributed or published by any person for any purpose without Industry Capital Research's prior written consent. Please cite source when quoting.
