With 2024 In the Books, Investors Face Lower Estimates and Clouds For 2025; Hold

James Dix, CFA

(1) 917 292 4293

james.dix@industrycapitalresearch.com

We reduce our price target to \$2.00 from \$2.50, on lower estimates and higher macro risks.
Our rating stays Hold.

Stock sank 17% after 4Q results, perhaps a side effect of fading transparency. It took us some work and a few non-trivial assumptions to arrive at our pre-release expectations for 4Q results, in part because of the reduced transparency of the company's operations. With 4Q earnings, we have the evident discontinuance of management calls to discuss results. The new (as of 3Q) Media segment consolidates old TV and radio, as well as the relatively small U.S. digital advertising operation, now shifted out of the legacy Digital segment. In place of the old Digital segment is the new Advertising Technology & Services ("AT&S") segment, which contains the Smadex DSP and Adwake mobile growth solutions. Gone is separate reporting of results of the TV and radio operations, which EVC had disclosed ever since it acquired radio in 2000. In neither 4Q nor 3Q did EVC offer any numbers on its political ad revenue, despite EVC's professed focus on monetization from political advertising, one of the few meaningful secular growth drivers the company has left. Nor is EVC any longer offering color on core growth, excluding political advertising, either for reported results or pacing information. On its 3Q call, EVC said that its political advertising did not meet its internal objectives, but did come in above the 2022 level. This suggests that our \$35.7m estimate for 2024, above \$32.1m in 2022, but below the \$40m figure referenced in prior EVC conference presentations, is likely fairly accurate.

Our 2025 adjusted EBITDA estimate goes to \$28.4m from \$31.7m, primarily on a shift in revenue mix to lower margin AT&S from higher margin Media, which faces a tough political comp. See Fig. 5. Aside from updating for 4Q results and outlook, our principal forecast changes are: 1) raising our 2025E revenue for higher expected AT&S growth, while trimming our 2025E EBITDA on lower margins, 2) slightly raising our out-year EBITDA growth estimates, primarily to reflect higher forecast AT&S growth, and 3) our usual WACC estimate updates for beta and macro inputs to our DCF. See Fig. 6. At 12/31, total and net leverage were 2.8x and 1.8x, vs. 3.0x and 2.0x at 9/30. respectively.

Surprise 4Q earnings release revealed ... predictable results. 4Q slightly beat our EBITDA expectations, the publication of which was awaiting an announcement of the date for the earnings release and conference call, which never came. Our 4Q expectations had dropped in the wake of EVC's 3Q results and outlook, but others' expectations may not have dropped as much. See Fig. 2. Adj. EBITDA of \$19.4m (18.2% margin) beat our \$18.5m (18.7% margin) expectation. See Fig. 3. Reported revenue growth was +30% for Media and +49% for AT&S, vs. prior pacing of +28% and +30%, respectively. Reported Media/AT&S OCF margins at 32.2%/7.1% were below our 34.1%/10.9% expectations. EPS was a loss of \$0.62, vs. our \$0.25 profit expectations, reflecting a \$61.2m impairment charge (EPS was \$0.05 ex-impairment).

Our 12-month price target is \$2.00; risks on page 2. Our PT is supported by a spectrum value estimate and a DCF valuation based on explicit financial forecasts through 2030. See Fig. 14.

Investment Thesis and Valuation: Hold With \$2.00 Price Target

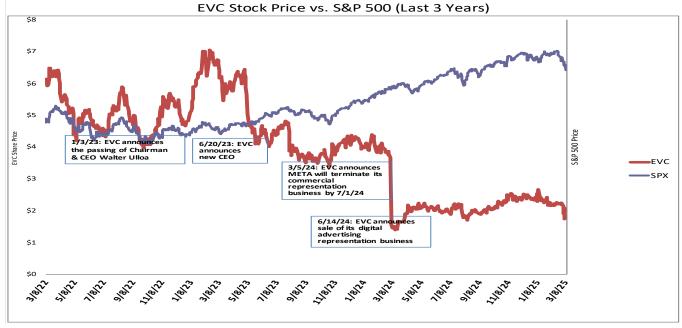

We rate Hold the shares of EVC. Despite 1) a reduced operating risk profile for EVC's overall business because of the stability of TV retransmission revenue (68% of 2024 EBITDA), secular growth of political advertising revenue, modest pro forma net debt leverage of ~2x EBITDA, and potential monetization from future spectrum auctions (as in 2017), EVC shares nevertheless face 2) audience declines at its U.S. broadcast business, and 3) dependence on and potentially increasing competition with its primary network programming supplier TelevisaUnivision. Our valuation supports stock price performance over the next 12 months consistent with a Hold rating.

Our 12-month price target is a weighted average of projected equity valuations using a discounted cash flow (DCF) analysis at year-end 2025 and 2026, plus an estimated value for spectrum assets the sale of which would be immaterial to continuing EVC's broadcast operations. Our PT assumes a base case forecast with 2025/26 adjusted EBITDA pro forma for asset sales of \$29m/\$45m, and \$85m for spectrum asset value, resulting in a target valuation of \$2.00. In structuring our DCF, first we adjust the current net debt for the value of any estimated payments remaining on the acquisitions (e.g., earnouts) and noncontrolling interest. Second, we adjust the current net debt by the estimated free cash flow to be generated by each valuation date. Finally, we value EVC both using a weighted average cost of capital (WACC) reflecting its own stock price trading and using separate WACCs for its broadcast and digital media businesses based on sector comparables, applied to separate free cash flow forecasts for each of these businesses. The results of these two methods, plus the estimated spectrum value, set the range for our valuation. Note that in our DCF, for our terminal value estimates, we assume that capex equals D&A, which results in a substantially higher capex estimate than in our financial statement forecasts because capex should be similar to D&A for a terminal value forecast, to support the need for an asset base in perpetuity.

Risks to our investment thesis include: 1) sensitivity of EVC's advertising-based businesses to macroeconomic flux, and 2) the impact of 2023 change in voting control and 2024 asset sales on company's strategy and pursuit of potential longer-term options, including capital allocation and sale of all or a portion of the company.

Entravision Communications Corporation (EVC)

3Q recap: adj. EBITDA of \$15.1m marginally missed our \$15.3m estimate. See Fig. 2. Total revenue beat our estimate by ~\$9m, primarily because of the AT&S segment. Political advertising and Smadex drove the revenue growth. Reported revenue growth was +23% for Media and +30% for AT&S. OCF missed by \$3.7m, offset by a beat on lower corporate expense, reflecting reclassification of ~\$2.5m to operating segments. The 3Q24 decline in corporate expense was substantial enough—a \$6.9m y/y decrease from \$13.3m in 3Q23—to warrant detail here from the 10-Q on declines of \$2.0m in salaries and bonus expense, \$2.0m in non-cash stock-based compensation, \$2.5m in corporate expense reallocation, and \$0.4m in professional services expense, partially offset by an increase of \$0.6m in audit fees. Media OCF margin was 24.9%, down from 26.9% the year before, despite strong Media revenue growth of 22.7%. The 3Q Media opex increase was almost \$5m y/y, and over 3x the estimated y/y increase in 3Q22, the prior election year, although part of the increase reflected the mid-year reclassification of some corporate expense to the operating segments. AT&S OCF margin was 7.4%, down from 7.9% the year before, despite AT&S revenue growth of 30%. EPS was a loss of \$0.12, vs. our \$0.05 profit estimate, on higher tax expense, although FCF of \$9.3m was in line.

After 3Q results, we cut our 4Q adjusted EBITDA expectations, primarily on reducing our revenue growth forecast for the Media segment. See Fig. 2. Net-net, our 4Q total revenue expectations came down roughly \$15m, more for Media than AT&S. Total opex expectations came down ~\$2m, assuming moderation in spending post-election, resulting in reducing our adj. EBITDA expectation by ~\$11m.

Figure 3: 4Q results were slightly above our reduced expectations

Source: Company reports, Industry Capital Research estimates

Industry Capital Research

Entravision Communications (EVC)

EVC's 3Q results and outlook, others' expectations may not have dropped as much. See Fig. 2. Adj. EBITDA of \$19.4m (18.2% margin) beat our \$18.5m (18.7% margin) expectation. See Fig. 3. Reported revenue growth was +30% for Media and +49% for AT&S, vs. prior pacing of +28% and +30%, respectively. The 4Q results suggest substantial displacement of core Media advertising by EVC's political ad windfall. 4Q GDP growth of 2.3% came in slightly below consensus expectations of ~2.5% (per the WSJ Economist Survey). On the other hand, auto sales finished with a solid 4Q to be up 2.2% in units sold for the year. With inventories rising, reported promotional activity picked up, which could have bolstered auto ad spending as well. Reported Media/AT&S OCF margins at 32.2%/7.1% were below our 34.1%/10.9% expectations. EPS was a loss of \$0.62, vs. our \$0.25 profit expectations, reflecting a \$61.2m impairment charge (EPS was \$0.05 ex-impairment).

Figure 4: For 2024, quarterly pattern of total operating expense growth ended up somewhat similar to prior election year in 2022

Source: Industry Capital Research estimates and company data

Whatever EVC's final 2024 political ad haul was (we estimate \$22.9m for 4Q and \$35.7m for 2024), EVC's efforts seemed to have had the wind at their back. TelevisaUnivision positioned its flagship network well for 2024 political ad spending through having a more centrist editorial slant, a better relationship with the Trump campaign, and a number of highly rated telecasts with Trump. Polls indicating rising Hispanic support for Trump and other Republican candidates—including, for example, in border regions where EVC has a strong TV station footprint—likely encouraged more ad spending from both parties up and down the ballot. And in the event, Trump increased his share of the U.S. Hispanic vote to 42% from 35% in 2020, per estimates reported in the Wall Street Journal.

Figure 5: Our 2025 estimates go higher on revenue but not on EBITDA, which we expect to decline over 30% pro forma against political comp

Our 2025 adjusted EBITDA estimate goes to \$28.4m from \$31.7m, primarily on a shift in revenue mix to lower margin AT&S from higher margin Media, which faces a tough political comp. See Fig. 5. Aside from updating for 4Q results and outlook, our principal forecast changes are: 1) raising our 2025E revenue for higher expected AT&S growth, while trimming our 2025E EBITDA on lower margins (we estimate that pro forma EBITDA margins decline y/y by ~400bps), 2) slightly raising our out-year EBITDA growth estimates, primarily to reflect higher forecast AT&S growth, and 3) our usual WACC estimate updates for beta and macro inputs to our DCF. See Fig. 6. At 12/31, total and net leverage were 2.8x and 1.8x, vs. 3.0x and 2.0x at 9/30, respectively.

We reduce our price target within an unchanged valuation estimate range on reduced 2025 estimates and increased near-term macro risks. Consensus calls for a slight slowdown in U.S. GDP growth in 2025, with a slowdown in growth in 1Q vs. 4Q. One risk for the U.S. Hispanic market that drives EVC's Media ad spending is that consumer spending trends appear to be weaker for younger and lower-income than older and higher-income demographics. For auto, EVC's largest ad category, the 2025 outlook is for a slight increase in sales, but one risk here is the potential impact of tariffs, which could have a disproportionate impact on the prices of less expensive vehicles.

Our valuation range is unchanged after our 2025 estimate changes, slight increase of our out-year EBITDA growth estimates to reflect higher forecast AT&S growth, and usual WACC estimate revisions to reflect updated beta and macro inputs. See Fig. 6. Estimated pro forma net debt has decreased to \$86.4m from \$93.1m prior to 3Q results.

Note that our valuation includes \$85m for spectrum asset value, and we believe that EVC's potential to sell more spectrum remains a long-term catalyst. The new head of the FCC has indicated support for another spectrum auction. The FCC's authority to conduct another spectrum auction has expired, and thus it is quite possible that Congress would need to act to kick start another auction process in which EVC might participate. It took four years from the passage of the Spectrum Act in 2012 to the beginning of the last FCC spectrum auction in which EVC participated in 2016.

Adjusted EBITDA Margin, FY, 2015-30E 35.0% 30.0% 25.0% 20.0% 15.0% 10.0% 5.0% 0.0% 2021A 2025E 2022A 2023A 2024A 2016A 2017A 2018A 2019A 2028 2015 2020A 2026 2027 2030E 2029

Figure 7: Long-term forecast assumes adjusted EBITDA margins hold in 2025, and then are higher in election years

Source: Industry Capital Research estimates and company data

Our longer-term forecast assumes adjusted EBITDA margins basically hold in 2025 and then are higher in election years. For 2025-2030E, Media revenue growth is up double-digits in political (i.e., even) years and down double-digits in non-political (i.e., odd) years. Within the Media segment, we expect the main revenue drivers to be political advertising and the U.S. digital business. See Fig. 8. We assume that, within Media, political ad revenue is over \$30m in political years and a couple million dollars at most in off-years, and that retransmission consent revenue declines gradually from over \$30m annually now to roughly \$20m annually in several years. Also, within Media, we assume that core TV revenue growth is down roughly 10% in political years, reflecting displacement of commercial advertisers, and up mid-single digits in off-years, and that core radio revenue growth is down upper single digits in political years and up low single digits in off-years.

The main driver of our forecast even-odd year margin pattern is the Media segment, reflecting the political ad cycle. We estimate Media OCF margins in the low-to-mid-20s in election years (vs. 23% in 2024), and roughly 15-20% in off-years. We assume that, within Media, reflecting a reallocation of some corporate expense, TV OCF margins will be roughly 25-30% in election years and in the 20% range in off-years, radio OCF margins will be roughly in the mid-to-upper teens in election years, and 10-15% in off-years, and US Digital OCF margins will move to the mid-teens over the longer term.

We forecast that, over the next couple of years, AT&S revenue growth will be strong double digits in percent. We assume that AT&S OCF margins gradually move to over 10% over this period (vs. 8.4% in 2024).

For 2025 on, our forecast corporate expense drops by \$12-13m/yr, of which ~\$10m/yr is due to reallocation to direct and SG&A expense. Recall that corporate expense increased to \$50m in 2023 from \$28m in 2020, primarily because of higher salaries, bonuses and non-cash compensation.

Review and Outlook March 11, 2025

Finally, we have noted the dimming light on EVC's results, stemming from the elimination of separate reporting of results for the TV and radio operations, as well as less disclosure regarding political and other advertising revenue; this could contribute to a valuation discount. With 4Q earnings, we have the evident disappearance of management calls to discuss results, in which the company traditionally provided pacing information, among other things. In addition, disclosure of results no longer includes estimated core growth, whether for Media revenue or advertising revenue. We note that, whereas the 3Q23 10-Q gave color on the changes in direct opex and SG&A expense (e.g., for stock-based compensation, salaries, music license fees, and rent expense), the 3Q24 10-Q provided no such detail, simply breaking down the change in direct and S&GA expense across the two new segments.

Figure 8: Within Media Segment, we expect the main revenue drivers to be political advertising and U.S. digital business

APPENDIX

Additional information relative to securities, other financial products or issuers discussed in this report is available upon request.

COMPANY-SPECIFIC DISCLOSURES

The following disclosures relate to relationships between Industry Capital Research and the company covered by Industry Capital Research and referred to in the research report (the "Company").

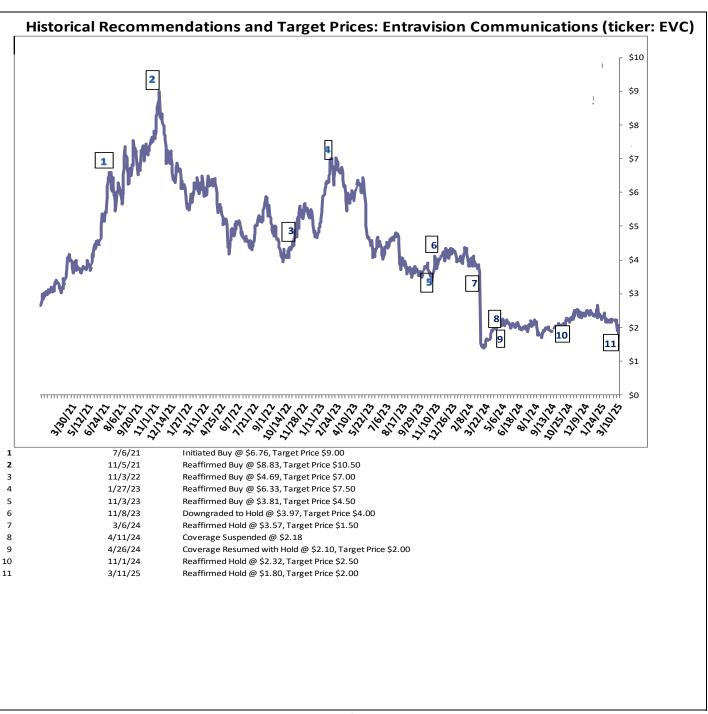

Industry Capital Research and/or its affiliate(s) does not make a market in securities issued by the Company.

RESEARCH ANALYST CERTIFICATION

The analyses and recommendations expressed in this research report accurately reflect my personal views and true opinions about the subject securities or issuers. No part of my compensation was, is, or will be directly or indirectly related to any specific recommendations or views expressed in the research report and/or any public appearance.

ANALYST CREDENTIALS, PROFESSIONAL DESIGNATIONS, AND EXPERIENCE

The author, Director of Research at Industry Capital Research, is a CFA® charterholder who has 18 years of experience as an analyst at U.S. broker-dealers covering the media sector, was rated #2 Stock Picker in U.S. Media for 2016 by Thomson Reuters, holds a BA (Economics) and MBA from the University of Chicago and a JD from the University of Virginia, and is a member of the Beta Gamma Sigma and Phi Beta Kappa honor societies.

Ratings Definitions

BUY: total return expected is >15% over a 12-month period

HOLD: total return expected is between 15% and -15% over a 12-month period

SELL: total return expected is <-15% over a 12-month period

The target prices of shares mentioned in the accompanying text are based on the assumed investment horizon of 12 months. If company notes are published on these shares in the future, the target prices mentioned in the subsequent notes will have priority.

Global Disclaimer

The information and opinions in this report were prepared by Dix Consulting, LLC, a New York Limited Liability Company doing business as "Industry Capital Research" or one of its affiliates (collectively "Industry Capital Research"). The information herein is believed by Industry Capital Research to be reliable and has been obtained from public and non-public sources believed to be accurate and reliable, but Industry Capital Research does not represent that the information herein is accurate or complete, and it should not be relied on as such.

All statements or opinions contained herein that include the words "we", "us", or "our" are solely the responsibility of Industry Capital Research and do not necessarily reflect statements or opinions expressed by any person or party affiliated with the Company mentioned in this report.

Industry Capital Research may have published, and may in the future publish, other research reports that are inconsistent with, and reach different conclusions from, the information provided in this report. Industry Capital Research is under no obligation to bring to the attention of any recipient of this report any past or future reports.

Industry Capital Research, its officers, employees, and members of their households, or any one or more of them, and their discretionary and advisory accounts, may have a position in any security discussed herein or in related securities and may make, from time to time, purchases or sales thereof in the open market or otherwise. The author of this report will not cause to be executed any order that would change a position in a security of the Company discussed herein in a manner that is contrary to, or inconsistent with, the most recent published recommendations or ratings of Industry Capital Research. Without limitation of the foregoing, the author will not cause to be executed: 1) when said recommendation is BUY, any order that would reduce or liquidate a long position or initiate or increase a short position in said security, 2) when said recommendation is SELL, any order that would initiate or increase a long position or reduce or liquidate a short position in said security.

Opinions, estimates and projections in this report constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Industry Capital Research and are subject to change without notice. Industry Capital Research has no obligation to update, modify or amend this report or to otherwise notify a reader thereof in the event that any matter stated herein, or any opinion, projection, forecast or estimate set forth herein, changes or subsequently becomes inaccurate, except if research on the subject Company is withdrawn.

This report is provided for informational purposes only. It is not to be construed as an offer to buy or sell or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy in any jurisdiction.

Investors should consider this report as only a single factor in making their investment decision. The financial instruments discussed in this report may not be suitable for all investors and investors must make their own investment decisions using their own independent advisors as they believe necessary and based upon their specific financial situations and investment objectives. Investors should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. This report is not to be relied upon as a substitute for the exercise of independent judgment. No judgment is hereby expressed or should be implied as to the suitability of any security described herein for any specific investor or any specific investment portfolio.

Prices and availability of financial instruments are subject to change without notice. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the price or value of, or the income derived from, the financial instrument, and such an investor effectively assumes currency risk. In addition, income from an investment may fluctuate and the price or value of financial instruments described in this report, either directly or indirectly, may rise or fall. Past performance is not necessarily indicative of future results, and a loss of capital may occur.

This report may not be reproduced, distributed or published by any person for any purpose without Industry Capital Research's prior written consent. Please cite source when quoting.
