GLOBAL STRATEGIES

AI Video Analytics for Safer Correctional Facilities
AMP Global Strategies + Scylla.ai
ACA Winter Conference • Long Beach • February 5–8, 2026

The Challenge in Today's Correctional Environments

Correctional facilities rely on hundreds—sometimes thousands—of camera feeds. Staff must simultaneously monitor inmates, movement, doors, radios, phones, and logs. The result:
• Critical incidents are often seen too late
• Contraband activity goes unnoticed
• Control rooms experience alert fatigue
• Incident reviews require hours of manual video search

Human attention isn't the problem—**the workload is.**

The Solution: Correctional-Focused AI Analytics

AMP, in partnership with **Scylla.ai**, delivers advanced video analytics built for secure correctional environments and compatible with existing camera systems.
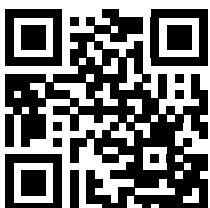

Core Capabilities:
• Fight & aggression detection
• Contraband & object detection
• Restricted-zone & perimeter monitoring
• Behavior & anomaly detection
• Real-time alerts
• Works with existing cameras & VMS

Benefits for Corrections

• Faster response to fights and medical emergencies
• Better intelligence on inmate behavior
• Reduced control-room overload
• Improved operational awareness with existing staffing
