

Install instructions 2015 fairing

As there is a Number of videos of how to disassemble / assemble the RG fairing I am going to link a few videos.

I used this video: <https://www.youtube.com/watch?v=UMCPdr8aftA>

- Remove factory headlight
- remove side covers
- drill bracket
- attach bracket to neck using U-bolts
- follow steps outlined in you tube video with the following deviation at the point that you are to attach lower supports instead:
 - Drill z-bars
 - install (z-bars) to frame,
 - remove the brass fitting pictured from the glove box (I used a clamp and a bolt – pushing it out from the backside)
 - mark location on inner fairing
 - drill a hole for Z-bar bolt through fairing
 - install bolt through z-bar, inner fairing, glovebox hole (location of removed brass fitting)
 - install nut and tighten down z-bar
- continue install as instructed by video
- reinstall side covers
