

Example SMART Goals: Math Problem-Solving Skills

Specific

The intervention team will provide targeted math interventions to students in grades 3-5 who are struggling with multi-step word problems.

Measurable

By the end of the semester, 70% of these students will achieve a success rate of 70% or higher on assessments involving multi-step word problems.

Achievable

Interventions will focus on problem-solving strategies, and progress will be measured through formative assessments.

Relevant

This goal directly addresses a key need identified through data analysis and supports their overall math comprehension.

Time-Bound

This goal will be evaluated at the end of the semester.
