WHAT IS MONEY?

By Naytik Jain

You must have always wanted stuff right and mom-dad work day and night. Why do they work? They work so you can buy cool objects and cover their expenses. Today you are able to buy things with their help. This is simple. Your parents work for somebody or provide something to another person like help or some thing. Your parents demand money for that service. Money is just a bill, a piece of paper but it is valuable because the RBI Governor has signed on it. Your parents work harder and they earn more money. Things are so simplified now right, but many centuries ago they were not like that. Let's learn about the history of money.

Earlier people used to trade things for things for example an apple with an orange or a bicycle with a horse. This was problematic as everybody perceived a different value for things and trade was sometimes unfair according to the buyer or the seller's perception. Somewhere later about 5,000 years ago people started to use gold and silver coins. That resulted quite better and then paper money was invented. Slowly the world has now moved to online payments. Money has been developing fast.

Money is a medium of exchange which can buy you goods, products, toys and lot more cool stuff.

WHAT IS CRYPTO?

By Naytik Jain

We established that money is important part of our life. People have moved on and now they've started to use cryptocurrency. They are just like hotels in a monopoly game which our bought with money but unlike the hotels the value of cryptocurrencies change. Crypto Coins are traded in the market. There is this technology called the blockchain technology which is just like the internet. It is a connected technology stores NFTs' values in a chain which is virtually impossible to hack, edit and cannot be changed easily after they are created. All of this information is stored everywhere just like the internet.

A NFT is a non-fungible token, it contains digital value sor example it might have some artwork, GIFs, songs or any other thing for that matter.

Fun Fact

The most expensive cryptocurrency called "The Merge" is sold for \$91.8 million (Approx 700 crores). BTW, this amount is so big that you could buy 2 real rockets in that amount.

Cryptocurrency is a type of currency which uses digital files as money

Activity of the Month

Gift some money or
some old clothes to
the needy and
don't tell them that
you gave it.

**You will learn the art of giving without
expecting something in return :D**
