## TECHNICAL SPECIFICATIONS

|  |                                |                                                        |
|--|--------------------------------|--------------------------------------------------------|
|  | Front Wingspan                 | 2400 mm                                                |
|  | Wingspan                       | 1700 mm                                                |
|  | Length                         | 1900 mm                                                |
|  | Folded Dimensions              | 180 × 180 mm                                           |
|  | Powerplant                     | Electric motor                                         |
|  | Maximum Payload                | 10 kg                                                  |
|  | Maximum Catapult Weight        | 35 kg                                                  |
|  | Minimum Catapult Takeoff Speed | 120 km/h                                               |
|  | Cruise Speed                   | 120–150 km/h                                           |
|  | Maximum Endurance              | 100–150 min<br>(depending on payload and cruise speed) |
|  | Ceiling                        | >4,000 m                                               |
|  | Takeoff and Landing Method     | Gunpowder or<br>cold gas cylinder launch               |
