2015

issue 2

Welcome to issue 2 of 2015

This year see's the biggest change in the Laboratory in its 22 year history.

The biggest change has been our long awaited leap into Digital Dentistry with the acquisition of the Medit Blue Scanner using the world renowned Exocad software.

During our Summer shutdown , the Laboratory is being remodelled , hence the extra day, which will provide us a clean reception area, Digital room , more natural light and a shade taking area.

Would you be interested in fully bespoke dentures? Teeth staining , amalgam fillings, composite fillings?

I have been experimenting with materials for a while now and new materials reaching the market now are making it more achievable.

I have the opportunity to receive further training from experts in this area and although I am keen to add to my skillset I have to know whether its something that is of interest to my Customers.

Obviously the finished denture would command a higher cost and I know discerning patients with deeper pockets are a rarity , but I would appreciate any feedback on whether there would an appetite for such a service.

Sports Mouthguards

Spring is upon us and the request for Sports-mouthguards will soon begin again.

We offer laminated mouthguards in a wide range of colour combinations in 4 or 5mm thickness, each incorporating the patients name and supplied with a carry case.

Posters and colour tabs are available on request.

Prices start from £21 .

New Additions

Last month I attended the DTS in the NEC. I have been assessing many products and am currently testing new materials . The first new product we will offer is Vertex thermosens, a slightly flexible almost unbreakable material. One complaint of current flexible dentures on the market today is they can be too flexible. Thermosens is more rigid with a small degree of flex . Price wise it will be the same as flexite but I am pretty confident it will become a popular addition to our services.

More Courses

In March I attended another Implant course with an emphasis on Dentsply Implants and the Atlantis system. I was particularly interested in preplanning and jigs, from Surgical stents to transfer jigs and learned a considerable amount about the vitally important if less celebrated procedures in Implant placement.

June 26-27th will see me in Macclesfield learning Dental Photography , now where's my cravat?

Digital Photographs

I know I've mentioned this before but I would very much appreciate digital photos of fitted work.

This is an excellent communication tool and I receive many images for shade matching and I would encourage all Surgeons to send photos even if its an iPhone pic , however I seldom receive any photos of the work in situ.

An image would help me enormously by letting me gauge what I got right and more importantly what I got wrong .

This can only help me improve and benefit both Surgeon and Patient.

I can accept images through Dropbox or email on Denturamics@btconnect.com

Enigmallife

This month saw the launch of the acclaimed Enigmallife teeth.(Our customers will be aware of Enigma's as it is our private tooth of choice) These teeth have been 4 years in the making and the quality is phenomenal. The good news is that although Enigmallife is a more expensive tooth, Denturamics will provide these teeth at the same price as the current Enigma's.

Give me a call on 01542 835525 to receive a mould chart and Technical brochure.

Summer Holidays

This year Denturamics will close for our 2 Week Summer holidays from Friday 31st July until Tuesday 18th August.

28 land street, Buckie, Moray, AB56 1QS., tel/fax 01542 835525 , denturamics@btconnect.com
