USAGE PROGRAM

This feed is a complementary feed prepared to meet the milk yield needs of dairy cows.

Anima Cattle Dairy Feed is a feed for low-yielding dairy cows, taking into account the fat content of the milk.

It should be fed at a rate of 1 kg for every 2 kg of milk. To achieve the expected efficiency from this feed, the animals' maintenance needs should be calculated separately and high-quality roughage should be provided.

Anima Milk The bait

It provides a healthy productivity period by providing a cost advantage for dairy cows with low milk yield.

This product is sold in 50 kg bags.

FEATURES:

- Its protein and energy content is balanced.
- It allows for the preparation of appropriate rations with all types of coarse and concentrated raw materials.
- It is delicious and appetizing. • It contains all the vitamins and minerals needed daily.

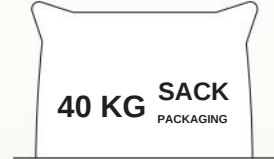

Cure Dry Period The bait

It is a feed balanced in terms of energy and protein, formulated for use in the dry period of cows up to three weeks before calving.

This product is sold in 40 kg bags.

FEATURES:

- Ensures the healthy development of the calf in the womb. • Ensures the regeneration of the rumen and mammary glands without tiring the rumen. • Reduces the risk of dystocia, metritis and milk fever thanks to its anionic content. • Highly digestible. • Enables higher milk yield during the lactation period.

USAGE PROGRAM

This feed is a complementary feed used in the nutrition of dry period cows that have given birth at least once. Depending on the animal's body weight and the type of forage used, 3-6 kg of **Derman Dry Period Feed** should be fed daily. All essential nutrients are balanced using a computerized ration program.

USAGE PROGRAM

This feed is a complementary feed used in the feeding of cattle during the heifer and first pregnancy periods. Depending on the animal's age, live weight, and the type of forage used, 2-4 kg of **Endam Heifer Feed** should be fed daily. All essential nutrients are balanced using a computerized ration program.

Stature Heifer The bait

It's a feed balanced in energy and protein that can be used in breeding heifers from their 7th month until 3 weeks before calving. It ensures your heifers reach their target birth height and weight.

This product is sold in 50 kg bags.

FEATURES:

- It contains all the nutrients necessary for the development of breeding heifers.
- Ensures healthy development of mother and offspring throughout pregnancy.
- Ensures high productivity from breeding stock for many years with the proper development of mammary glands.

Fattening Feeds

An efficient solution for healthy weight gain

Fattening Their bait

Fattening Feeds are high quality and healthy products that provide high live weight gain, maximum meat conversion rate and low fattening costs, allowing you to make a profit.

You can contact **our Regional Sales Specialists** for special solutions with different roughage sources in your business .

Effect

Fattening

Beginning The bait

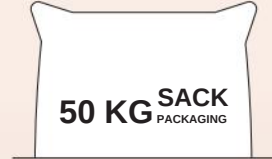

It has been specially prepared to be used in the transition phase of calves to the fattening period, taking into account their nutritional needs.

Provides rapid muscle and bone tissue development.
It ensures the formation of the skeletal structure necessary for high live weight gain in the future.
Highly digestible raw materials were used.
It is tasty and appetizing to encourage high dry matter consumption.

This product is sold in 50 kg bags.

FEATURES:

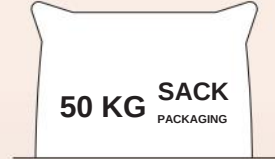

- Enables efficient feeding of calves during the transition to fattening.
- Provides rapid muscle and bone tissue development.
- Ensures the formation of the skeletal structure necessary for high live weight gain in future periods.

USAGE PROGRAM

It is suitable for feeding animals grown with the Calf Programme, which are fattened at approximately 180 kg, up to 250 kg .

USAGE PROGRAM

In order for the fattened calves to develop healthily in a short time, their feeders must be constantly full.
In order to get the expected results from fattening feed, the productivity and maintenance needs of the animals must be calculated and given with good quality roughage.

Wrestler

Fattening

Development

The bait

It is a special feed that provides a high rate of live weight gain in a short time, especially during the fattening development period in intensive fattening enterprises.

This product is sold in 50 kg bags.

FEATURES:

- Provides maximum live weight gain in the targeted period. • Has a balanced ration with high digestibility. • Feed utilization and meat conversion ratio is high. • Prevents the emergence of digestive system and foot diseases due to intensive fattening.
- Provides rapid growth and muscle development. • It is delicious and appetizing.

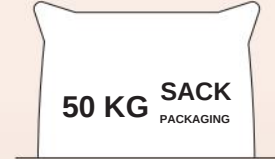

Grand Fattening Finishing The bait

It's a special feed used in intensive fattening operations, particularly for calves over 400 kg live weight. Its high energy content ensures rapid live weight gain without causing fat gain during the pre-slaughter period.

This product is sold in 50 kg bags.

FEATURES:

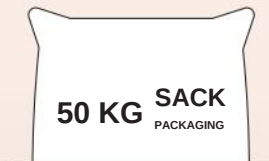

- Provides rapid live weight gain in the final period of fattening.
- Provides muscle development without causing fat gain in the final period of fattening.
- Has a balanced ration with high digestibility.
- It is a feed balanced in terms of energy, protein, vitamins + minerals.

USAGE PROGRAM

In order for the fattened calves to develop healthily in a short time, their feeders must be constantly full. In order to get the expected results from fattening feed, the productivity and maintenance needs of the animals must be calculated and given with good quality roughage.

USAGE PROGRAM

In order for the fattened calves to develop healthily in a short time, their feeders must be constantly full.
In order to get the expected results from fattening feed, the productivity and maintenance needs of the animals must be calculated and given with good quality roughage.

Valiant Fattening The bait

Yiğit Fattening Feed is a feed to be used especially in the early stages of fattening so that the calves to be fattened can develop healthily in a short time.

This product is sold in 50 kg bags.

Yiğit Fattening Feed is produced in pellet and granule forms.

FEATURES:

- Provides rapid muscle and bone tissue development.
- Provides rapid growth and live weight gain.
- High feed conversion and meat conversion rates.
- Has a balanced ration with high digestibility.
- Tasty and appetizing.
- It is a feed suitable for creating a safe and high-performance total ration with all types of coarse and concentrated raw materials.

Efe

Powder Fattening

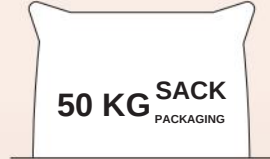

The bait

It is a special feed that provides a high rate of live weight gain in a short time, especially during the fattening development period in intensive fattening enterprises.

This product is sold in 50 kg bags.

FEATURES:

- Provides maximum live weight gain in the targeted period.
- Has a balanced ration with high digestibility.
- High feed utilization and meat conversion rate.
- Provides rapid growth and muscle development.
- Tasty and appetizing.

USAGE PROGRAM

For fattened calves to develop quickly and healthily, their feeders must be constantly filled. To achieve the expected results from fattening feed, the animals' productivity and maintenance needs must be calculated and they must be fed with high-quality forage.

USAGE PROGRAM

It is a complementary feed used with barley and other grains in the feeding of fattening calves. In each feeding period, 2 kg of Premium Agile Fattening Feed and free amount of grain are given per animal per day. Because it's not a standard fattening feed, it should be used with 2 kg of barley flakes and straw, liberally, for live weights between 150 and 500 kg. If use with grains other than barley is desired, Abalıyoğlu technical support specialists should be consulted.

Agile Fattening The bait

With its special formula rich in vegetable protein, Agile Fattening Feed completes the protein deficiency of grains such as barley and corn used during the fattening period.

This product is sold in 50 kg bags.

FEATURES:

- Contains vitamins and minerals needed by cattle during the fattening period. • Agile fattening feed provides a good total ration balance by completing the nutrients that grains do not contain.
- A good feed by improving the conversion rate to meat provides carcass efficiency.
- It reduces fattening costs and shortens the fattening period.

Arpamix

Fattening

The bait

Arpamix is a protein concentrate designed for farmers with existing grain resources. It was developed to help producers with extensive barley usage in their operations create profitable rations.

This product is sold in 50 kg bags.

FEATURES:

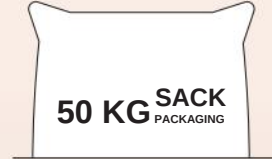

- Arpamix contains nutrients that barley does not contain. It provides a good total ration balance by completing the feed.
- It provides a good carcass yield by improving the feed to meat conversion rate.
- It reduces fattening costs and shortens the fattening period.

USAGE PROGRAM

This feed is a complementary feed used with barley and other grains in the feeding of fattening calves. In each feeding period, 3 kg of Arpamix and free amount of grain are given per animal per day.

USAGE PROGRAM

For fattened calves to develop quickly and healthily, their feeders must be constantly filled. To achieve the expected results from fattening feed, the animals' productivity and maintenance needs must be calculated and they must be fed with high-quality forage.

Besimix

Muesli

Fattening

The bait

It is specially prepared for beef cattle.

It is a special feed that can be used throughout the entire fattening period with its rich raw material content.

This product is sold in 50 kg bags.

Besimix Muesli Fattening Feed is produced in our Denizli factory.

FEATURES:

- Thanks to its delicious and appetizing form
It is consumed with pleasure by beef cattle. • It contains specially processed corn and barley flakes.
It provides a better fattening performance by increasing dry matter intake with their flavor and smell. • It is produced from highly digestible raw materials. • The feed utilization and meat conversion rate is high. • It is also used with flake products used in the feed content.

Despite being consumed in small amounts, it provides 8-12% more energy than unprocessed grains. • All nutritional elements such as energy, protein, vitamins and minerals are balanced in a computer environment.

Complement baits

Expert solution for healthy productivity

Complement baits

Complementary Feeds, in the rumen

It helps increase microbial protein synthesis and enzymatic digestion in the small intestine.

In this way, the amount of ammonia formed in the rumen is reduced.

The decrease in rumen ammonia levels results in a decrease in urea nitrogen levels in blood and milk.

Complementary feeds improve the digestibility of grains is the highest form.

For special solutions with different roughage sources in your business
You can contact **our Regional Sales Specialists** .

Egyptian Complement Bait

Corn Complementary Feed is a product obtained by cooking corn in specially designed steam boilers and then crushing it through a special process.

With the use of Corn Complementary Feed, Microbial protein synthesis and enzymatic digestion in the small intestine are increased. Heat treatment gelatinizes starch, increasing its digestibility.

This product is sold in 40 kg bags.

Corn Complementary Feed
It is produced in our Denizli and Konya factories.

FEATURES:

- Same as 8-12% increase in digestion
Despite being consumed in large quantities, unprocessed grains higher rate of energy, therefore provides increased performance.
- Specially processed corn supplementary feed has by increasing dry matter consumption with its flavor and smell provides an increase in productivity.
- It meets the high energy needs required during early lactation in the most economical way.

USAGE PROGRAM

It is used in the feeding of all ruminant animals.

USAGE PROGRAM

It is used in the feeding of all ruminant animals.

Barley Complement Bait

Barley Complementary Feed is a product obtained by cooking the grain in specially designed steam boilers and then crushing it through a special process.

With the use of Barley Complementary Feed, microbial protein synthesis in the rumen and enzymatic digestion in the small intestine are increased.

This product is sold in 40 kg bags.

Barley Complementary Feed is produced in our Denizli and Konya factories.

FEATURES:

- Specially processed Barley Complementary Feed increases dry matter consumption with its taste and smell.
provides an increase in productivity.
- High energy requirement in early lactation meets its needs in the most economical way.

Small Ruminant Feeds

Effective solution for high efficiency

You can contact **our Regional Sales Specialists** for special solutions with different roughage sources in your business .

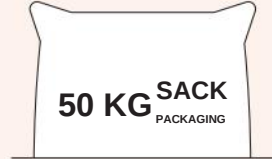

Karagoz Lamb Beginning The bait

It is used in the feeding process of newborn lambs from the 1st day to the 45th day.

This product is sold in 50 kg bags.

FEATURES:

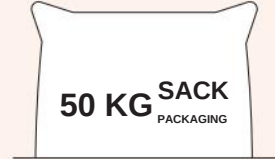

- It has a balanced ration with ideal energy, protein, vitamins, and minerals, and does not require vitamin supplements. •
- With its delicious and appetizing properties, it helps lambs get used to the food quickly. • It ensures rapid growth. • It improves the lambs' skeletal system and body condition. • Its ammonium chloride content prevents the emergence of urinary stones and related urinary retention.

USAGE PROGRAM

It is a complementary feed that is fed freely to lambs during their 8-week period.

USAGE PROGRAM

It is used to feed lambs from day 45 to day 90. Along with good-quality roughage, lambs are fed as much **Supplemental Lamb Grower Feed** as they can eat each day .

Sociable Lamb Magnification The bait

It is used in the feeding of lambs from the 45th day to the 90th day.

This product is sold in 50 kg bags.

FEATURES:

- It has a balanced ration with ideal energy, protein, vitamin and mineral content.
- Urinary stones and related problems with ammonium chloride content Prevents the emergence of urinary retention problems. • Increases the quality and quantity of carcass meat. • Provides a very good feed conversion rate, high live weight gain, high slaughter efficiency and profitability.

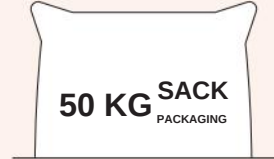

Alagoz Lamb Magnification The bait

It is used in the feeding of lambs from the 45th day to the 90th day.

This product is sold in 50 kg bags.

FEATURES:

- Increases carcass yield and quality.
- Has ideal protein, energy, vitamin and mineral content for the needs of lambs.
- Increases profitability by providing rapid live weight gain with its feed conversion ratio.
- Prevents urinary tract stones with its specially developed formula.

USAGE PROGRAM

It is used to feed lambs from day 45 to day 90. Along with good-quality roughage, lambs are fed as **much Red-Eyed Lamb Grower Feed** as they can eat each day .

USAGE PROGRAM

You can contact our Feed Technical Support Specialists for the usage program.

Lamb PİK Magnification The bait

Premium Lamb Peak Grower Feed, which has a high feed utilization level, has a rich content in terms of protein, energy, vitamins and minerals.

Thanks to its high nutritional value, it provides rapid live weight gain in fattening lambs.

This product is sold in 50 kg bags.

FEATURES:

- From the 45th day to the 90th day of lambs
- It has a ration structure

developed with quality raw materials to meet the nutritional needs of lambs and support their development. • It provides all the nutritional needs of fattening lambs during their development process.

It meets the needs of livestock. It has a rich content in terms of protein, energy, vitamins and minerals. • It provides high live weight gain, high slaughter efficiency and profitability with a very good feed conversion rate. • It is produced from highly digestible raw materials.

It is a feed that lambs can consume with appetite. • It prevents urinary stones and related urinary retention.

Swarthy Yearling Fattening The bait

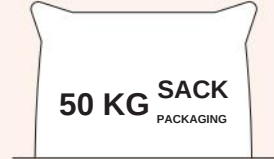

It is used in the feeding of yearling livestock used in the Lamb Program.

This product is sold in 50 kg bags.

Yay z Yearling Fattening Feed is produced in pellet and powder form.

FEATURES:

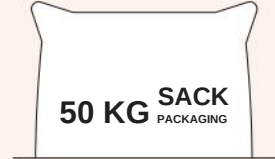

- It has a balanced ration with ideal energy, protein, vitamin and mineral content.
- It is appetizing due to its granular structure. • It provides good fattening and is low in fat and high quality. Provides carcass meat. • Feed utilization and meat conversion rates are high.

USAGE PROGRAM

Fat Yearling Fattening Powder Feed is given as much as it can eat every day along with good quality roughage .

USAGE PROGRAM

Along with good quality roughage, the **Fat Yearling Muesli Fattening Feed** is given as much as it can eat every day.

Swarthy Yearling Muesli Fat The bait

Yağız Toklu Muesli Fattening Feed prevents the emergence of digestive system and metabolism diseases caused by intensive fattening, thanks to the balance of energy, protein, vitamins and minerals it contains.

High feed utilization and meat conversion rate

Yağız Yearling Muesli Fattening Feed provides good fattening and low-fat, high-quality carcass meat.

This product is sold in 50 kg bags.

Fattening Feed for Yearlings
It is produced in our Denizli factory.

FEATURES:

- It increases dry matter intake with its delicious content. • It stimulates appetite with its granular structure. • It provides weight gain with its balanced content,
 - Reduces fatness. •
- During the fattening period, yearlings need provides vitamins and minerals.
- Higher with steam-processed and crushed grains provides starch digestion.

Aggressive Yearling

Fattening

The bait

This product is sold in 50 kg bags.

FEATURES:

- Increases carcass yield by ensuring the rapid conversion of feed into meat. • It has a special formula that meets all the needs of yearlings throughout the fattening period with its balanced protein, vitamin and mineral structure. • Ideal when used with quality roughage. creates a fattening ration.

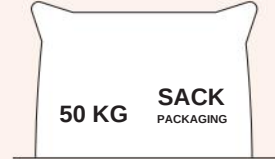

USAGE PROGRAM

Along with good quality roughage, **Atılgan Yearling Fattening Feed** is given as much as it can eat every day.

Broiler Chicken

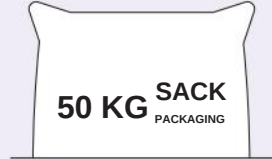

The bait

It is a complete feed used in the nutrition of broiler chicks from the 25th day until slaughter.

Feed formulas are prepared according to the digestible amino acid and energy needs of broiler chickens, which change in weekly periods.

In order to make good use of feeds, attention should be paid to the coop temperature, coop cleanliness, placement density and breeder chick quality, which affect performance.

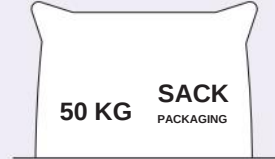

This product is sold in 50 kg bags.

USAGE PROGRAM

It is a complete feed used to feed broiler chickens from 25 days until slaughter. Should only be used for target animals.

USAGE PROGRAM

In small scale and medium sized farms, laying hens should be given after the 18th week. Used throughout the productive period. All essential nutrients for the healthy growth of laying hens. The items were balanced on the computer.

Wandering Chicken The bait

Free Range Chicken Feed is a feed recommended to be used in free-range laying hens from the 18th week, when egg production begins.

It has been prepared with a formulation that does not compromise on egg yolk and egg shell quality, along with digestible amino acid and energy content to meet the needs of free-range chickens during the high egg production period.

The living conditions animals need must be carefully prepared, and attention must be paid to water consumption. Clean and readily available water must always be available to the animals.

To avoid productivity losses due to diseases, vaccination programs should be carried out under the supervision of a veterinarian.
