Environmental Responsibility

Seramik undertakes to work for carbon neutrality, to monitor climate diplomacy in international forums and to establish, operate and maintain the Energy Management System in ceramic tile production processes in order to offer solutions that have an impact on global emissions.

According to the changes in the prints of pattern due to the design of our products, the color tone changes indicated on the labels of the boxes are made as follows. When it is opened 1 box from the product you purchased, changes in the patterns and views between the tiles found in the box are varied with respect to the design of the products.

UNIFORM
APPEARANCE

V1 Uniform Appearance

Color and texture difference between the tiles from the same lot is very low which cannot be seen as a result of the nature of the material.

SLIGHT
VARIATION

V2 Slight Variation

There are clear differences in surface texture and printing patterns among the tiles having similar colors.

MODERATE
VARIATION

V3 Moderate Variation

Main colors in one single tile can be found in other tiles. However color intensity shows differences between tiles. This is generally used in rustic tiles.

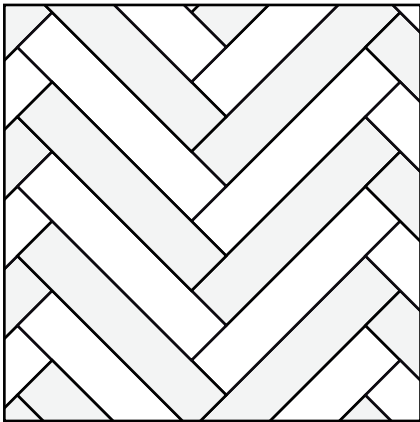

SUBSTANTIAL
VARIATION

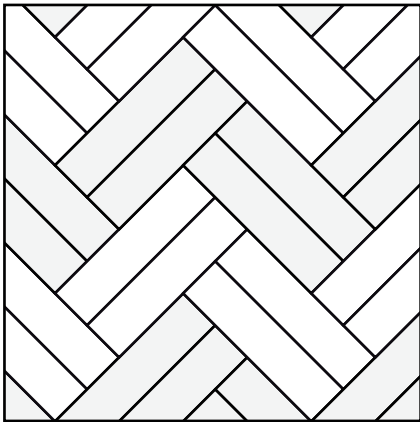

V4 Substantial Variation

Color differences can be observed from one tile to another. Thus, color of one tile can be different from another one. However, a harmony is observed between colors. These kinds of products can be found in the boxes in a random order. This is a design approach which is generally used in rustic tiles. Color and texture variation can be controlled in our facilities. This is a parameter and it is developed in the stage of product development as a requirement of market demands and design.

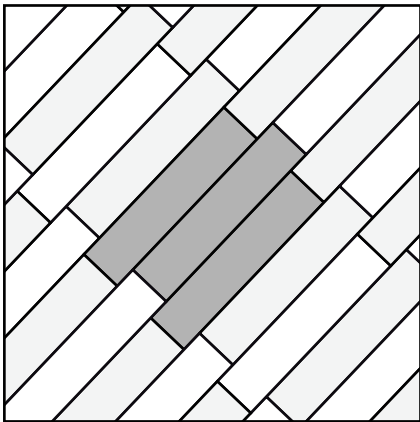

Application Techniques

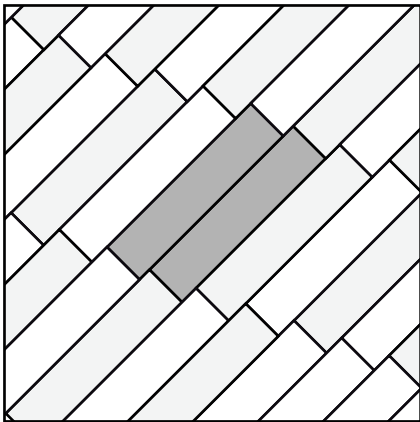

Herringbone Laying

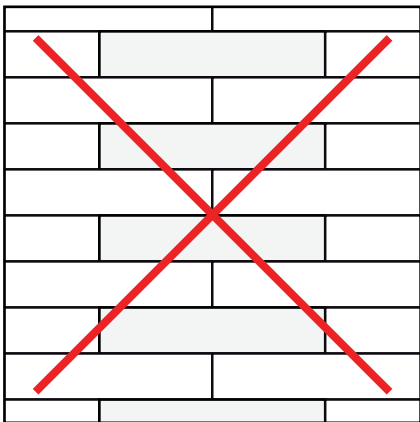

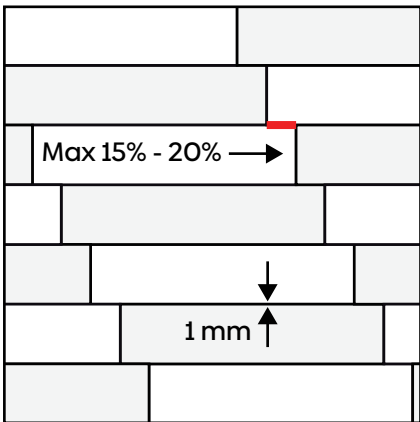

Double Herringbone Laying

Staggered Laying (Max 15% - 20%)

Staggered Laying (Max 50%)

Half Offset Laying is not Recommended
