

Euphoria®

IDEAL SOLUTION FOR PRECISION AGRICULTURE

AUTO-STEERING SYSTEM

Overview

The Auto-Steering System is an automatic steering system which uses high-torque motor control steering wheel. It integrates the advantages of convenient installation, large torque, high precision, low noise, low heat and quick debugging. It is suitable for various applications of tractors, harvesting machines, plant protection machinery, rice transplanters and other agricultural models.

The system includes a control tablet integrated with a 4G modem, a steering wheel motor with a built-in controller. It can be widely used for sowing, cultivating, trenching, ridging, spraying pesticide, transplanting, harvesting and other work scenarios.

Seamless Operation Power

In addition to uninterrupted use provided by the GPS connection with a SIM card, it offers seamless usage within a 25 km radius with Base Station support for terrains with challenging geographical conditions.

Easy to Use

It provides very easy usage with the simple interface of the Android-based tablet that the system possesses.

Quick and Easy Setup

Without cable clutter and without making changes to the tractor cabin, you can start using your automatic steering system quickly and easily with a fast installation.

Modes of Operation

Working in straight and curved lines at high and low speeds is quite easy according to your terrain.

Free Updates

You can receive new features and updates for free.

U-Turn

Enables automatic turning at the end of rows in the field.

Night Mode

Thanks to the night mode, it allows smooth operation in foggy and bad weather conditions.

Online Technical Support

Provides control and technical support opportunities with remote access to the system network 24/7.
