MASSIVE HEMORRHAGE CONTROL

Massive Hemorrhage Control

Hemostatic Gauzes

Hemostatic Combat Gauze

QUIKLOT® Z-FOLD COMBAT GAUZE®

QuikClot Combat Gauze with Kaolin technology is the first preferred Hemostatic dressing in the world.

- 3 in x 4 yds (7.5 cm x 3.7 m)
- Weight 24g
- Packaged 13cm x 15cm
- Z-fold and vacuum
- Easy detection in X-Ray applications
- Includes a strip so you can
- Compact, easy to store, 8-point
- openable package
- 5 years shelf life

TECHNOLOGY

QuikClot Combat Gauze is impregnated with kaolin, an inorganic mineral that activates Factor XII, which in turn accelerates the body's natural clotting ability.

- #350 Combat Gauze, only
- Packaging is different. In content there is no difference.
- #273 Combat Gauze, for training purposes is produced. Kaolin active ingredient does not contain. It is non-sterile.

COMPRESS GAUZES

Compress gauze is used to control bleeding while applying direct pressure using wound intervention techniques in conjunction with Hemostatic gauze or a compression bandage for small wound dressings.

NAR WOUND PACKING GAUZE

NAR Wound Dressing Cloth

- 3 in x 5 yds (7.5 cm x 4.5 m)
- Weight 34g
- Packaged 7.5cm x 5cm
- Z-fold and vacuum
- Easy detection in X-Ray applications
- Includes a strip so you can
- Compact, small and 2-point
- openable package

NAR S-Rolled Gauze

NAR Compressed Gauze

- 4.5 in x 4.1 yds (11.43 cm x 3.75 m)
- Weight 34g
- Packaged 7.5cm x 5cm
- 6-layer, 100% cotton and vacuum package
- Compact, easy to store, 2-point
- openable package
- Disposable and sterile package

Tactical Medical Compress Gauze

Kerlix Bandage

- 4.5 in x 4.1 yds (11.43 cm x 3.75 m)
- Weight 34g
- Packaged 7.5cm x 5cm
- 6-layer, 100% cotton and vacuum package

FR19[®] GEN2

Extremity Tourniquet

UDI-DI 868216933902LR

FR19[®] is used to control bleeding occurring in the upper and lower extremities.
It is the first and only tourniquet produced 100% locally in Türkiye.
Package sizes.....6.3 x 15 x 4 cm
Weight.....92 g
Open Length.....96 cm

1 Time Band and C-Lock

C Lock System, connected to the central apparatus made of durable plastic, suitable for field conditions, can be used to lock the tourniquet and use it when desired. It is used for loosening.

2 Central Apparatus

The central apparatus, made of durable, flexible and unbreakable plastic, consists of a webbing, velcro, windlass arm and C lock system. It has embossed writings on the top for easy application in places where visibility is difficult.

3 Strapping Buckle

Buckle made of durable plastic
Provides fast application.

4 Windlass Handle

Buckle made of durable plastic
Provides fast application.

5 Webbing

High-strength webbing made of polyester, long and wide enough to grasp the lower and upper extremities

Extremity Tourniquets

Extremity Tourniquets

SOF® Tourniquet

GEN 4

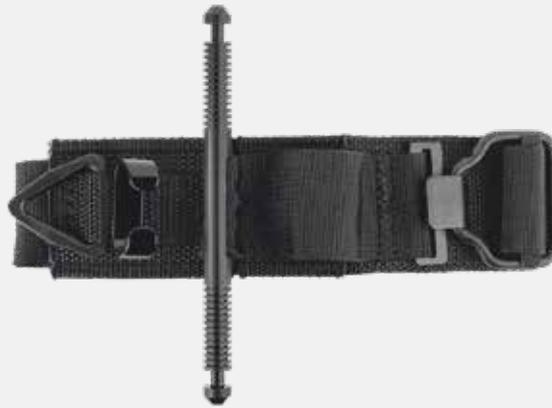

- 5.5 in x 2 in x 1.75 in (Packaged)
- 14cm x 5cm x 4.5cm (Packaged)
- Weight 90 g (3.2 oz.)
- Disposable and latex-free

FEATURES

SOF® Tourniquet has a 4 cm wide, specially woven column that is capable of wrapping and applying pressure towards the limb to be intervened.

Unlike other products on the market, the windlass arm is made of aluminum material.

The windlass arm fixing clip consists of a buckle that helps loosen and apply.

SOF® Turnstile has 5 different models in total. Models are identified with color codes. The Blue (Trainer) model is produced for use during emergency response training. The Rescue Orange model is produced for firefighters, police officers and mountaineers. All models, along with other available colors, are options that users can use or create kits according to their preferences.

Trauma Bandages

Trauma Bandages

OLAES® MODULAR BANDAGE

OAL-4

- 10cm x 90cm (4 in x 35 in) (Unstretched)
- 10 cm x 200 cm (4 in x 80 in) (Gauze)
- 14cm x 11cm x 5cm (Packaged)
- 5.5 in x 4 in x 2 in (Packaged)
- Weight 100 g (3.5 oz.)
- 10 cm x 15 cm (Non-adhesive wound pad)
- Pressure spoon and fixing velcro
- Illustrated application instructions on the packaging

FEATURES

Olaes® bandage is an extremity bandage that includes 3 meters of gauze, a non-stick pad and a transparent pressure applicator focused on applying pressure to the wound. It does not require hooks or clips that would delay intervention. The pressure applicator can also be used on its own as an eye shield. Olaes® bandage, which consists of 4 layers and is produced with a Z-layer structure, is designed for accurate and rapid intervention to the injured in difficult field conditions. It has alternative models in different widths and packaging styles.

BLAST® BANDAGE

BLAST

BLAST

- 10cm x 165cm (4 in x 65 in) (Unstretched)
- 14cm x 12cm x 5cm (Packaged)
- 5.5 in x 4.7 in x 2 in (Packaged)
- Weight 100 g (3.5 oz.)
- 45 cm x 45 cm (Non-adhesive wound pad)
- fixing velcro
- Illustrated application instructions on the packaging

FEATURES

Blast® bandage is designed to respond to traumatic amputations, burns and large-scale injuries, especially in the abdominal area. It has a 10 cm wide elastic bandage and a 45 x 45 cm non-stick pad. The pad can be easily wrapped around the limb and ready for evacuation with an elastic bandage. It acts as a broad sterile protective covering for shrapnel injuries and burns. The Blast® bandage also has a removable occlusive layer used to cover the inside of the abdomen, minimizing heat and moisture loss, covering an area of 48 x 48 cm.

MASSIVE HEMORRHAGE CONTROL

EMS EMERGENCY BANDAGE

4" Hemorrhage Control Bandage

CR-BD01 Bandage

- 10 cm x 450 cm (4 in x 180 in) (Stretched)
- 15cm x 11cm x 3cm (Packaged)
- 6 in x 4 in x 1.2 in (Packaged)
- Weight 100 g (3.5 oz.)
- 10 cm x 10 cm (Non-adhesive wound pad) (2 pieces)
- 2nd pad that can be removed when desired
- Pressure applicator and Fixing bar
- Illustrated application instructions on the packaging

FEATURES

4 in Hemorrhage Control Bandage; It is used in bullet/shrapnel injuries, lower and upper extremity injuries or amputations and burn injuries. It provides absorbency with the pad part it contains. In addition, with its elastic bandage structure, it provides precautions against pressure and contamination risks in the injury area. It has 2 pads, including a removable pad if desired. It is a trauma bandage that is fast, simple and can be easily applied by the individual.

EMS ABDOMINAL BANDAGE

6" Hemorrhage Control Bandage

CR-BD02 Bandage

CR-BD02

- 15 cm x 400 cm (6 in x 65 in) (Stretched)
- 16cm x 9cm x 3cm (Packaged)
- 6.3 in x 3.5 in x 12 in (Packaged)
- Weight 115 g (4 oz.)
- 25 cm x 30 cm (Non-adhesive wound pad)
- 25 cm x 30 cm (Wound covering transparent cover)
- fixing bar
- Illustrated application instructions on the packaging

FEATURES

6 in Hemorrhage Control Bandage; It is used for bullet/shrapnel injuries, lower and upper extremity injuries, amputations and burn injuries, as well as large-scale injuries, especially in the abdominal area. The 25x30 cm dressing pad on it is large enough to cover the abdominal area. In this way, it provides the opportunity to easily treat the injured person in a sterile manner in case of abdominal injuries. It is a trauma bandage that is fast, simple and can be easily applied by the individual.

THE POCKET BVM®

Bag Valve Mask

- Proven in military and civilian applications
- Compact and low volume compared to other ambu masks
- Plastic box resistant to harsh field conditions
- Kit Content
- 1. Resuscitator
- 2. Mask
- 3. Reservoir bag
- 4. Durable box
- Weight 450 g (15.9 oz.)
- Resuscitator (273 g), Box (90 g), Mask (87 g)
- 5.2 in x 2.2 in (Diameter x Height) (Packaged)
- 13.4cm x 6.3cm (Packaged)
- Resuscitator 12.1 cm x 21.7 cm (Diameter x Height)
- Reservoir Volume 2.600 ml
- Latex free
- Disposable

FEATURES

The Pocket BVM® is designed to provide respiratory support to injured people with respiratory problems. Unlike other ambu masks, Pocket BVM® is delivered in its special compact and durable box.

Nasopharyngeal Airway & Lubricant
28, 30 FR

- 6 in x 1.6 in x 0.5 in (Packaged)
- 15cm x 4cm x 1.3cm (Packaged)
- Weight 14 g (0.5 oz.)
- Shelf life 5 years
- with Lubricant
- Sterile package and disposable

FEATURES

Nasopharyngeal Airway is a key product used in airway management. It is used in cases where the airway is blocked in semi-conscious or unconscious patients whose gag reflex is intact in accordance with human anatomy. It is a simple, reliable and efficient airway opening solution. A lubricating gel is supplied with the products to facilitate application. The product does not move during casualty evacuation and the injured can be evacuated safely.

Tactical Suction Device
Suction Easy™

- 9 in x 4 in (Packaged)
- 23cm x 10cm (Packaged)
- Weight 190 g (6.2 oz.)
- Shelf life 3 years
- Vacuum 100mmHg
- Volume 1,000 cc

FEATURES

Suction Easy™ is a reliable, simple and robust solution for clearing airway obstruction due to bloody fluids or other secretions. Suction Easy™ consists of a suction tube made of hard plastic, a suction bulb and a collection chamber for aspirated liquids. It prevents backflow of liquids thanks to one-way valves. It is designed for use in adults. It is easy to carry and store.

AIRWAY SAFETY

Airway Safety

SUPRAGLOTTIC AIRWAY

KING LTS-D™

- Kit contents;
 1. King LTS-D™
 2. 60 cc injector
 3. 18 Fr Aspiration Catheter
 4. Lubricant
- Weight 165 g (5.79 oz.)
- 4 in x 11.43 in x 1.92 in (Package)
- 10 cm x 29 cm x 4.9 cm (Package)
- Volume 60 ml
- No:3 (Yellow) Patient height < 61 in (155 cm)
- No:4 (Red) Patient height 61 in – 71 in (155 cm – 180 cm)
- No:5 (Purple) Patient height >71 in (180 cm)
- Latex free
- Sterile and disposable

FEATURES

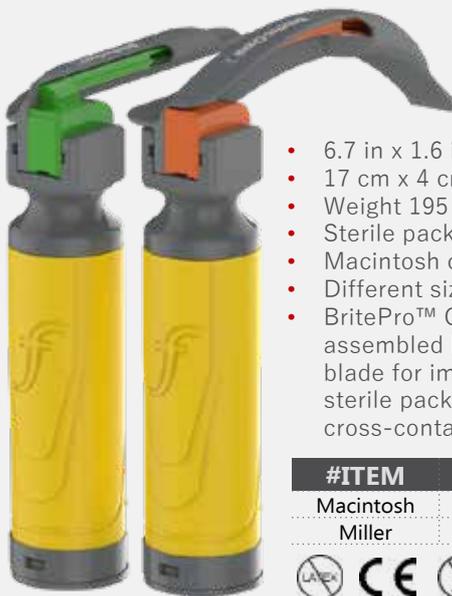

King LTS-D™, In emergency situations, it is an ideal aid to secure the airway as an alternative technique to mask ventilation and tracheal intubation during difficult airway management. Thanks to its double-channel structure, it helps to open the airway and allows aspiration of blood or gastric fluids.

SUPRAGLOTTIC AIRWAY

I-GEL®

- 11.2 in x 3.5 in x 2 in (Packed)
- 28.5 cm x 9 cm x 5 cm (Packed)
- Weight 115 g (4 oz.)
- Shelf life 3 years
- Sterile package and single use

FEATURES

Quick, easy and reliable to insert, I-Gel® is ideal for use in securing the airway. It provides high seal pressure and reduced trauma, while also incorporating a gastric channel for added protection against aspiration and providing a conduit for difficult airway management, as a rescuer and for intubation.

It has a compact, lightweight and durable design. It is designed for use in difficult field conditions where intubation is required. It can be applied directly without any processing after being removed from its package.

Decompression Needles

Decompression Needles

TYTEK® PneumoDart®

14 gauge x 3.25 in

- 3.25 in (8.25 cm) (Needle length)
- 5.3 in x 0.7 in (Length x diameter) (Package)
- 13.5 cm x 1.8 cm (Length x diameter) (Package)
- Weight 20 g (0.7 oz.)
- Sterile and disposable
- Latex free
- Veress safety needle to reduce the risk of internal organ perforation when inserted
- Transparent cap to monitor air and blood exiting the chest
- Luer lock cap allows air or blood to be expelled from the chest
- TCCC recommended chest decompression needle
- Shock resistant, precision-sized storage case

FEATURES

PneumoDart® is a reliable solution for the treatment of a tension pneumothorax injury. The 3.25 in long Veress needle allows for comfortable application while minimizing the risk of any organ deformation.

#ITEM	#REF	#NSN
PneumoDart	#30-1601	6515-01-655-9514

TYTEK® TPAK

10/14 gauge

- 3.25 in (8.25 cm) (Needle length)
- 5.3 in x 0.7 in (Length x diameter) (Package)
- 13.5 cm x 1.8 cm (Length x diameter) (Package)
- Weight 15 g (0.5 oz.)
- Sterile and disposable
- Latex free
- Impact resistant storage box that houses the needle and catheter together

FEATURES

The 10 and 14 gauge TPAK chest decompression needles are 8.25 cm in length, recommended for the treatment of tension pneumothorax. The strong, reliable chest decompression needle ensures safe placement of the catheter during needle tracheostomy. The needle is removed when the procedure is complete, and the catheter remains in place until the patient's condition improves.

Manuel Needle Set

EZ-IO® T.A.L.O.N.™ Needle Set

Kit Contents

1. 15 gauge, 304 stainless steel needle/catheter
 2. Stabilizer
 3. EZ-Connect® Extension Set
- 6 in x 3.25 in (Package)
 - 15 cm x 8.25 cm (Package)
 - Weight 42.5 g (1.5 oz.)

FEATURES

EZ-IO® T.A.L.O.N.™ is the first and only manual access set that provides 7-field IO access. It can provide access from the sternum, bilateral proximal humerus, bilateral proximal tibia and bilateral distal tibia regions. During tactical field care, it contains vital fluids and medications for the casualty quickly and effectively.

Surgical Tissue Adhesive

Derma+flex®

Derma+flex® is designed for the topical closure of surgical incisions and minor traumatic injuries. Once applied to the wound, it reacts to the chemical structure of the skin and polymerizes rapidly, forming a strong and flexible microbial barrier. Applied topically on a wound or cut, it also protects the skin from external bacteria.

- Creates a microbial barrier
- Easy to apply
- Highly flexible
- Suture and skin stapler compatible
- Waterproof
- Minimal exothermic effect
- Sterile and single use
- Helps accelerate wound healing

Foldable Tactical Neck Band

NeckBand

NeckBand is used by emergency personnel for traumatic head or neck injuries and for the treatment of chronic medical conditions.

- 18 cm x 55 cm (7 in x 21.6 in)
- Weight 105 g (3.7 oz.)
- 18 cm x 27 cm x 1 cm (Package)
- 7 in x 10.6 in (Package)
- 5 mm thickness
- Single Use
- Not contain latex
- X-ray transmittance property
- Easy handling and high stability

TECHNICAL SPECIFICATIONS

NeckBand offers great advantages during application with its shapeable aluminum and polyethylene foam coated structure. Thanks to its shapeable feature, it can be used on all injured persons with different neck sizes. Thanks to the openable chin support wings, the neck stabilization of the casualty is strengthened. Thanks to the tracheal opening in the front, it allows the application of Cricothyroidotomy while the neck band is on the casualty. It also has an elliptical vent on the back. Thanks to its foldable structure, it is very easy to store and transport.

Pelvis Belt

Pelvis Kemerli

- 19 cm x 75 cm x 0,5 cm (Open)
- 7.5 in x 29.5 in x 0.2 in (Open)
- 19 cm x 27 cm x 3 cm (Package)
- 7.5 in x 10.6 in x 1.2 in (Package)
- Green column (Fixed column) 5 cm x 19 cm
- Black column (Force applied column) 5 cm x 73 cm
- Weight 224 g (7.9 oz.)

TECHNICAL SPECIFICATIONS

Pelvis Belt is a one-way force-based circumferential Pelvis belt. It has been proven to safely and effectively reduce and stabilize ring fractures in the pelvis. It has an optimized one-piece design. All materials are radiolucent. Thus, there is no need to remove the product from the Pelvis region in X-ray and CT scans. Thanks to the locked buckle made of reinforced plastic material on it, the product is fixed on the casualty after the correct tightening. For correct tightening, the movable black column is pulled in one direction by holding the fixed green column and fixed after the casualty is secured. It allows the casualty to be transported safely during the evacuation of the wounded.

Tactical Stretcher

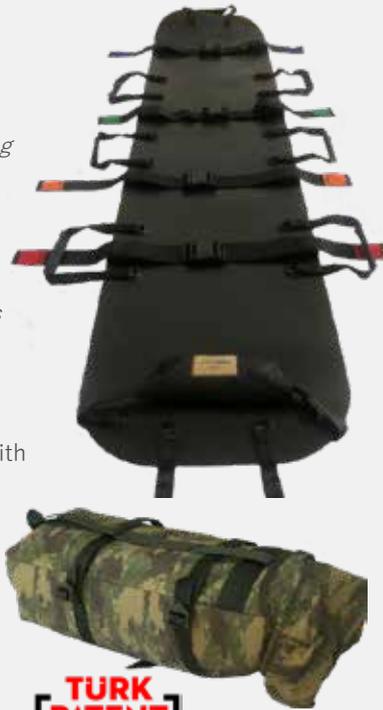

FORA Tactical Stretcher

FORA Tactical Stretcher is designed to evacuate the injured under difficult conditions in operation areas. While it can be carried by a single person via the pulling webbing, it also allows the evacuation of injured people by more than one person, thanks to the carrying handles on it. A bag is also provided with the FORA Tactical Stretcher. The bag can be carried by mounting it on equipment or backpacks with the MOLLE systems it contains.

- 47cm x 200cm
- 18.5 in x 78.75 in
- 5 cm wide adjustable fixing webbing with 4 locking buckles (with color codes)
- 8 carrying handles
- Suitable for transport, evacuation and dragging

Carrying Bag

- 20cm x 55cm
- (8 in x 21.65 in)
- Made of 500 Dtex Cordura fabric
- Waterproof
- 3 carrying handles
- Bag, equipment connection webbing

2019/02736

Mesh Stretcher

FORA Mesh Stretcher

FORA Mesh stretcher is designed for casualty evacuation or transportation, made of reinforced mesh, in difficult field conditions. Since it is foldable, it takes up little space and can be carried with all kinds of equipment. It is suitable for multiple uses due to its reinforced mesh structure. Thanks to its carrying handles, it allows 2 or 4 people to carry the injured person.

- 50cm x 195cm (Open)
- 20 in x 77 in (Open)
- 18cm x 27cm x 1cm (Package)

Carabiner

Since carabiners are also included in individual first aid kits, it is important that they are light, durable and have large major and minor axis load capacities. All parts that make up the carabiner are manufactured in anodized aluminum. The most important reason for this situation is that if there is no coating, the risk of corrosion increases.

#KG01BC-B

#ZA01B-X

FEATURES

It is produced in a narrow asymmetric "D" shape. The door opening can be easily opened and closed without the need for any locking or extra opening. It has a large ergonomic door opening, so it can be used in any environment, even in difficult field conditions.

KG01BC-B

- Aluminum
- Length 9.8 cm (3.85 in)
- Weight 49 g (1.72 oz.)
- Minor axis load 10 kN
- Major axis load 26 kN

Savior IFAK is made of 500 dtex Cordura fabric. In this way, it is compatible with difficult field conditions, waterproof and suitable for use for many years.

Savior IFAK can be easily attached to other equipment, such as bags, assault vests, etc., with the universal MOLLE system it has on it. In addition, it can be used on the leg and by tying it to a waist belt or bandolier.

Dismountable leg connector is adjustable for different anatomical leg structures. It is also suitable for use by detaching from the bag at any time thanks to the Dismountable technology.

Savior, with its 180° opening structure when attached to a leg or a bandolier, provides convenience during the intervention of the casualty. In addition, thanks to the pockets and elastic material inside the bag, the materials do not fall and provide comfortable mobility.

TECHNICAL SPECIFICATIONS

Urban Active IFAK is made of 500 dtex Cordura fabric. In this way, it is compatible with difficult field conditions, waterproof and suitable for use for many years. Urban Active IFAK can be easily attached to other equipment, such as bags, assault vests, etc., with the universal MOLLE system it has on it. Urban Active, with its 180° opening structure when attached to a leg or a bandolier, provides convenience during the intervention of the casualty. In addition, thanks to the pockets and elastic material inside the bag, the materials do not fall and provide comfortable mobility.

ExtracTIP Technology

ExtracTIP is a technology that allows the universal MOLLE system to be removed with single action. With the traditional MOLLE knitting system, the bag is knitted to any other equipment by means of the flaps. In case of emergency, it is sufficient to pull it upwards by holding it in the flaps to remove it in one move.

TECHNICAL SPECIFICATIONS

Vanguard IFAK is made of 500 dtex Cordura fabric. In this way, it is compatible with difficult field conditions, waterproof and suitable for use for many years. Vanguard IFAK can be easily attached to other equipment, such as bags, assault vests, etc., with the universal MOLLE system it has on it. Vanguard IFAK, with its 180° opening structure when attached to a belt or a bandolier, provides convenience during the intervention of the casualty. In addition, thanks to the pockets and elastic material inside the bag, the materials do not fall and provide comfortable mobility.

Vanguard IFAK has the feature of being the bag with the largest interior volume compared to other IFAK models. It is named because of this feature. However, thanks to the features it contains, it provides the practitioner with the ability to move comfortably during operations or trauma interventions.

TECHNICAL SPECIFICATIONS

Impact IFAK is made of 500 dtex Cordura fabric. In this way, it is compatible with difficult field conditions, waterproof and suitable for use for many years.

Impact IFAK can be easily attached to other equipment, such as bags, assault vests, etc., with the universal MOLLE system it has on it.

Impact IFAK with its 180° opening structure when attached to a leg or a bandolier, provides convenience during the intervention of the casualty. In addition, thanks to the pockets and elastic material inside the bag, the materials do not fall and provide comfortable mobility. Since it has a large internal volume, it allows the transportation of many materials both in short-term operations and in long-term operations. It allows the transportation of more than one product among vital products.

Quick Reach IFAK is made of 500 dtex Cordura fabric. In this way, it is compatible with difficult field conditions, waterproof and suitable for use for many years. Quick Reach IFAK can be easily attached to other equipment, such as bags, assault vests, etc., with the universal MOLLE system it has on it.

The Quick Reach is specifically designed for carrying on an assault vest. It can be carried in the chest area, providing quick access to vital materials and convenience during the injured intervention. In addition, thanks to the pockets and elastic material inside the bag, the materials do not fall and provide comfortable mobility. With ExtractIP, it can be removed from the attack vest simply and quickly, and it is functional for the bag to intervene in different casualties when necessary.

TECHNICAL SPECIFICATIONS

Pull'n Save IFAK is distinguished from other IFAKs with its different design. It consists of two pieces as holder and bag. The bag is made of rip stop fabric due to its light weight. Outer holder is made of 500 Dtex Cordura fabric. In this way, it is compatible with difficult field conditions, is waterproof and provides the protection of the inner bag. As the name Pull'n Save indicates, it is used in attack vests or on the chest, in the intervention of the casualty, by pulling from the carrying handles. The holder stays in place thanks to the MOLLE system it contains. It is placed back into the bag holder when desired. There is also the ExtractTIP feature on the holder.

Basic Level Medical Bag

Emergency response bag designed to carry equipment to be used in responding to multiple injuries.

Bag

- The back body consists of a front bag (with shoulder strap and carrying handle) that can be used independently, connected to the back body with a bone zipper, and an inner bag with 2 (two) carrying handles and a mesh pocket without any hardener (plastic-cardboard, etc.) used.
- The front bag has a bellows system that can be opened and closed via a zipper, allowing expansion of 7-10 cm.
- The inner bags have the feature of holding on to the male textile zipper on the back and the female textile velcro on the inside of the rear body.
- There is a hidden bellows pocket system at the bottom of the rear body. The hidden bellows pocket can be opened and closed via the zipper when desired.
- Bag dimensions are 40x35x56 cm.
- The waist and back parts of the bag are supported with sponge and mesh and have size adjustment features.
- There are internationally valid molle systems on the bags.
- The shoulder straps of the bags are designed with a quick-release device made of plastic material to get rid of the bag in emergency situations. The apparatus will be in 2 (two) parts, with a 2x3x4 cm female lock part and a 7 cm long male lock part, within a tolerance of ± 0.2 (plus minus two) cm. It has the feature of removing shoulder pads with a single move.
- There will be no hanging columns in the bag and it has a collection feature using velcro or elastic.
- There is an external poncho pocket under the bellows part of the bag. A poncho that is removable when desired and large enough to cover the bag completely while on the back is fixed in this pocket.
- Bag fabric material type (excluding coating), polyamide 6.6

Advanced Level Medical Bag

Emergency response bag designed to carry equipment to be used in responding to multiple injuries.

Bag

- Bag dimensions: 40x35x56 cm
- Bag fabric: polyamide 6.6
- Waterproof
- Rear body; It consists of a front bag (with shoulder strap and carrying handle) that can be used independently, fastened with a bone zipper, and an inner bag with a mesh pocket, with 2 (two) carrying handles, and no stiffeners (plastic cardboard, etc.) have been used.
- There is a hidden bellows pocket system at the bottom of the rear body. The hidden bellows pocket can be opened and closed via the zipper when desired.
- There is a water bottle pocket that can be attached to the bag with a Molle system.
- The waist and back parts of the bag are supported with sponge and mesh and have size adjustment features.
- There is an external poncho pocket under the bellows part of the bag. This pocket contains a removable poncho that is large enough to cover the bag completely when it is on the back.
- There is a backpack suitable for external use, which can be separated from the main body via a zipper.
- The front bag has a bellows system that can be opened and closed via a zipper, allowing expansion of 7-10 cm.
- There are 5 inner bags. The inner bags have the feature of holding on to the male textile zipper on the back and the female textile velcro on the inside of the rear body. It consists of compartments where the airway and breathing set, vascular access set, bleeding control set, wound care set, other materials and medications will be kept together.

TRAUMA SIMULATION

Fora Arm Training Simulator

FORA SIM-AT01

FORA SIM-AT01 is a model used in wound occlusion and wound closure training. This model is designed for medical personnel, first responders and emergency trainees to improve their practical skills and learn wound closure techniques.

AT01 consists of impact-resistant silicone surface and plastic endoskeleton with a realistic feel and appearance. While it provides practical use with its base and shoulder apparatus, it also offers the opportunity to train in the most realistic scenarios thanks to its joint movements.

FEATURES

- Length:85cm
- Width:23cm
- Height:16cm
- Weight: 4kg (± 1kg)
- 8 mm thick tear-resistant silicone skin
- Small Wound 1 (For Tourniquet Application)
- Small Wound 2 (For Tourniquet Application)
- Large Wound (For wound occlusion and wound packing application)

CONTENTS

- Arm Training Simulator
- Shoulder strap (For application on human)
- Manual pressure pump with liquid volume (2 liters)
- 3x valve for 3 separate applications
- 2 x 2 meters silicone hose

USAGE AREAS

- Tourniquet Application
- Wound Occlusion
- Wound Packaging

Fora Wound Pack Training Simulator

FORA SIM WP01

FORA SIM - WP01 Wound Pack Training Simulator; It was developed to teach the Wound Occlusion technique with hemostatic gauze pads, which is one of the severe bleeding control methods, in Tactical Combat Casualty Care trainings. The thigh area is produced by modeling the front surface and there is a simulated scar from exposure to explosive material, shrapnel, or a large-caliber weapon. It allows trainees of all levels to perform repeatable and realistic bleeding control training with hemostatic gauze dressings in Tactical Combat Casualty care trainings. Artificial blood is pumped into the wound with the 500 milliliter squeezing bottle included in the product package.

CONTENTS

- Wound Pack Training Simulator
- Silicone bleeding tube
- 500 ml. Liquid volume manual pressure pump

FEATURES

- Length : 23cm
- Width : 13cm
- Height : 9cm
- Weight : 2kg
- Polyester inner body
- silicone outer skin
- bleeding tube
- The inner body is made of durable polyester material.
- Small Wound
- The weight and non-slip structure of the inner body allows easy control.
- The external body of the simulator is long-lasting and gives a feeling of reality .It is made of silicone that is not easily deformed.

USAGE AREAS

- Wound Occlusion

Fora Short Leg Training Simulator
FORA SIM SL01

FORA SIM - SL01 is a training model used for Hemostatic tourniquet wound occlusion and wound packaging. Used to simulate issues such as bleeding control and wound occlusion/packaging, the model offers healthcare professionals the opportunity to develop practical skills. SL01 is the educational model used for health education and medical education. The model, used to simulate issues such as wound occlusion and wound closure, offers healthcare professionals the opportunity to develop practical skills. It increases the effectiveness of training by helping them develop error-proofing and practical packaging skills.

USAGE AREAS;

- Tourniquet Application
- Wound Occlusion
- Wound Packaging

FEATURES

- Length: 60cm
- Width: 25cm
- Height: 20cm
- Weight: 8,5 kg
- 12mm thick realistic silicone skin made of special ripstop fabric
- Amputated leg bleeding
- Major wound bleeding 1
- Major wound bleeding 2

CONTENTS

- Short Leg Training Simulator
- 2 liter manual pressure blood pump
- 2 meters silicone hose
- 3-way valve control unit for 3 separate wounds

Fora Lower Body Training Simulator
FORA SIM-LW01

FEATURES

- Length: 110cm
- Width: 37cm
- Height: 27cm
- Weight: 23 kg (±3kg)
- 8 mm thick realistic silicone skin made of special ripstop fabric
- Amputated leg bleeding
- Minor wound bleeding
- Major wound bleeding
- Durable plastic internal skeleton

CONTENTS

- Lower Body Training Simulator
- 2 liter manual pressure blood pump
- 3-way valve control unit for 3 separate wounds
- 3 Pieces of 1 meters silicone flexible hose

FORA SIM-LW01 It is an training model used for health education and medical education. The model used to simulate issues such as wound occlusion and wound closure offers health care professionals the opportunity to develop practical skills.

USAGE AREAS

- Tourniquet Application
- Junctional Tourniquet Application
- Wound Occlusion
- Wound Packaging

MILITARY TEXTILE

Universal Gun Holsters

UniGH

- 10 cm x 8 cm x 6 cm
- 4 in x 3.15 in x 2.4 in
- 170 g (6 oz.)
- Made of 500 Dtex Cordura fabric
- Lightweight, easy to store, ideal for high mobility
- Trigger mechanism made of durable plastic material
- The trigger mechanism moves downwards and pulls back the tongue that sits on the trigger part of the gun, allowing the gun to be removed from the slot.
- The gun is inserted directly into the slot without any action.
- When the click is heard, the gun is seated in the slot.
- On the back of the holster, there is a belt attachment with a plastic MOLLE system designed to attach to the waist belt.
- Adjustable for different belt lengths
