

# **ROLL FORMING**

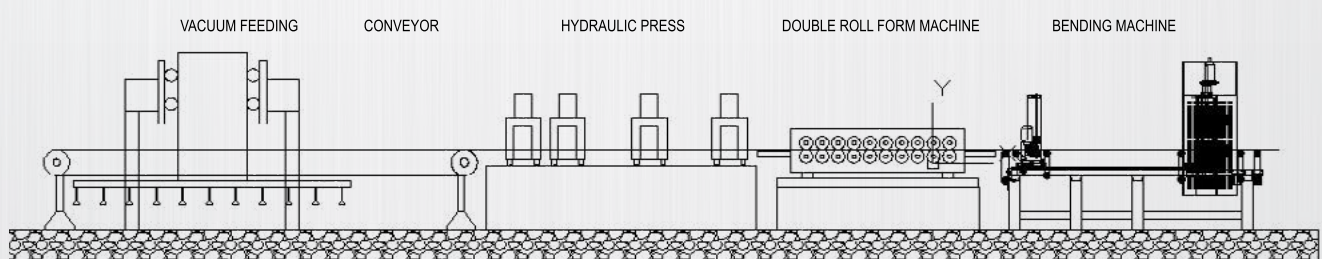

# FLEXIBLE LINE

Flexible production lines depend on the billet, obtained by trimming before or after profiling the sheet metal for rolling production in accordance with the shape of the product. These flexible lines consist of various mini-lines or various equipment. Depending on the type of form, the line stops or continues to function, from a roll or piece

## Line Creation

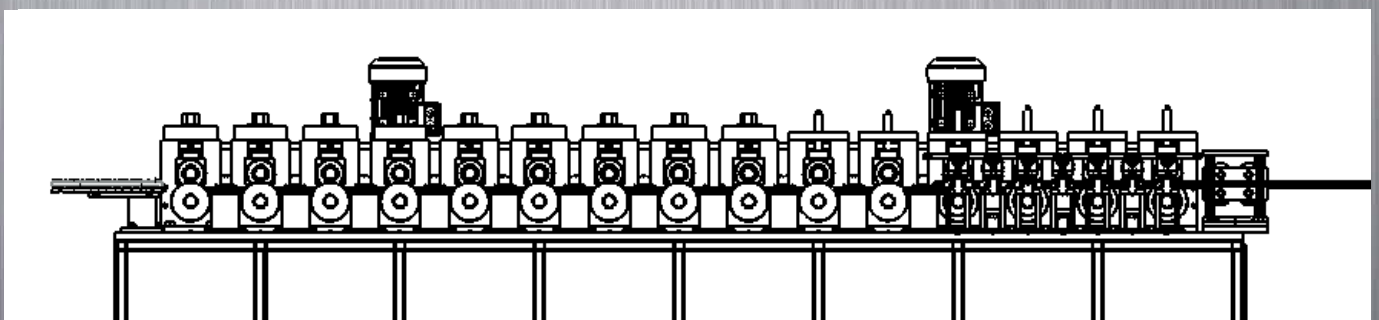

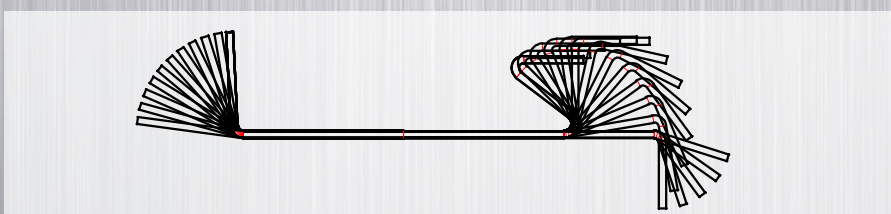

- A** ▶ "Cutting or molding parts"; unwinders, rectifier, feeders, punching, conveyor, rolling machine, flying scissors, Profile paver
- B** ▶ "without detachable or non-molded parts"; vacuum feed, rolling machine, flying scissors, Profile paver

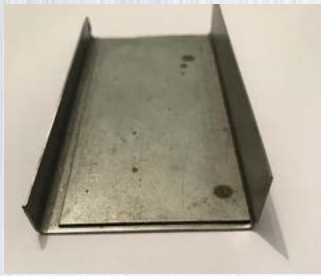

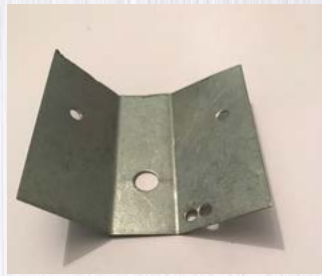

# ROLL FORMING

Vertical Refrigerator SLIDING DOOR is produced for walking on rollers. It is used as rail plate of sliding doors. The product is precise and complex in shape. The production capacity in Abkant increased by more than 3 times.
