

INFRARED SALT SAUNA CONSENT AND RELEASE FORM

Full Name: _____ DOB: _____

I Understand and agree to the following information.

- Infrared saunas work by using infrared heaters to convert light directly to heat. An infrared sauna uses soothing dry infrared heat that is well ventilated and extremely comfortable and relaxing.
- No clients under the age of 18 are permitted in the infrared Sauna without parental consent and unless accompanied by a supervising adult.
- You should prepare your skin for your session prior to your arrival. Skin should be free of deodorant, fragrances, oils, and lotions. Remove all make-up and jewelry.
- You should drink an adequate amount of water before, during and after infrared sauna treatment.
- If you are currently taking medications such as beta blockers, diuretics or barbiturates, which can affect your heart rate or interrupt your body's natural abilities to sweat, contact your physician prior to use of infrared sauna.
- If you have been diagnosed with, or suspect any of the following disorders/conditions, please contact your physician prior to use of infrared sauna as it may not be appropriate for you: Adrenal suppression and systematic lupus erythematosus or multiple sclerosis, recent (acute, within 48 hours) joint injury, chronically hot and swollen joints, enclosed infections (either dental, in-joints or any other tissue, breastfeeding, metal pins, rods, artificial joints or any other surgical implant due to the reflection of infrared rays by these articles, hemophiliacs and anyone predisposed to hemorrhage should avoid any type of heating that would induce vasodilatation, which can potentiate the tendency to bleed.
- Pregnant women are not permitted to use the infrared sauna.
- During your session we recommend wearing a bathing suit, sports bra and spandex, towel, or something minimal. We provide towels that you must sit on during your session. This is mandatory. You must also bring your own personal towel for all treatments.
- **Following the session, clients are asked to towel off, rest for several minutes and rehydrate before getting dressed and leaving.** We will check on you once every 15 minutes. When you are ready to exit the sauna to rest, we will bring you mineralized water and a snack. Please get our attention if you are ready for these items between the times we check on you.
- **If you feel light-headed, dizzy, or heat exhausted; open the door, turn off dials that control the heaters, and place a cold, wet towel on the back of your head.** *Consult your primary care physician prior to using the sauna.*

- **Sauna sessions should be limited to a maximum of 30 minutes at 150 degrees Fahrenheit maximum.**

I have read the list of attached contraindications and understand them and have also had an opportunity to ask any questions to a staff member. To my knowledge, I have no medical condition or contraindication which would preclude me from doing infrared sauna treatments. I understand that the infrared sauna is for the purpose of detoxification and is not intended to take place of medical care or medications. I understand that I take full responsibility for my own health and well-being. I acknowledge that the results of infrared sauna use do vary, and that no guarantees of specific results are offered or implied. Edmond Wellness will not refund or credit any amount of money because of a client's unhappiness with their final results. I agree to hold Edmond Wellness and all employees, providers, medical directors, officers, directors, owners and associates or authorized representatives harmless from any liability involved in the use of the infrared sauna. Edmond Wellness and their staff have explained this treatment to me and all of my questions, if any, were answered.

Signature: _____ Date: _____

IF THE CLIENT IS UNDER 18 YEARS OF AGE:

As Parent/Legal Guardian of the above listed Client, I acknowledge that I have read and understood the safety standards and warnings provided to me by Edmond Wellness and thereby authorize the consumer named above to use the infrared sauna. I acknowledge that I have read and completely understand this consent form, and agree to the above waivers of liability, recommendations and terms. I attest that I have provided accurate age, identity and relationship verification.

INFRARED SAUNA CONTRAINDICATIONS LIST MEDICATIONS:

Individuals who are using prescription drugs should seek the advice of their personal physician or a pharmacist for possible changes in the drugs effect when the body is exposed to Far infrared waves or elevated body temperature.

Diuretics, barbiturates and beta-blockers may impair the body's natural heat loss mechanisms. Some over the counter drugs such as antihistamines may also cause the body to be more prone to heat stroke.

CHILDREN: The core body temperature of children rises much faster than adults. This occurs due to a higher metabolic rate per body mass, limited circulatory adaptation to increased cardiac demands and the inability to regulate body temperature by sweating. Consult with the child's Pediatrician before using the sauna.

SAUNAS & THE ELDERLY: The ability to maintain core body temperature decreases with age. This is primarily due to circulatory conditions and decreased sweat gland function. The body must be able to activate its natural cooling processes in order to maintain core body temperature.

CARDIOVASCULAR CONDITIONS: Individuals with cardiovascular conditions or problems (hypertension / hypotension), congestive heart failure, impaired coronary circulation or those who are taking medications, which might affect blood pressure, should exercise extreme caution when exposed to prolonged heat. Heat stress increases cardiac output, blood flow, in an effort to transfer internal body heat to the outside environment via the skin (perspiration) and respiratory system. This takes place primarily due to major changes in the heart rate, which has the potential to increase by thirty (30) beats per minute for each degree increase in core body temperature.

ALCOHOL /ALCOHOL ABUSE: Contrary to popular belief, it is not advisable to attempt to "Sweat Out" a hangover. Alcohol intoxication decreases a person's judgment; therefore they may not realize it when the body has a negative reaction to high heat. Alcohol also increases the heart rate, which may be further increased by heat stress.

CHRONIC CONDITIONS/DISEASES ASSOCIATED WITH A REDUCED ABILITY TO SWEAT OR PERSPIRE: Multiple Sclerosis, Central Nervous System Tumors and Diabetes with Neuropathy are conditions that are associated with impaired sweating. _____ Patient Initials

HEMOPHILIACS INDIVIDUALS PRONE TO BLEEDING: The use of Infrared saunas should be avoided by anyone who is predisposed to bleeding.

FEVER: Individuals should not use the sauna when they have a fever.

INSENSITIVITY TO HEAT: An individual that has insensitivity to heat should not use a sauna.

PREGNANCY: Pregnant women should consult a physician before using a sauna because fetal damage can occur with a certain elevated body temperature.

MENSTRUATION: Heating of the low back area of women during the menstrual period may temporarily increase their menstrual flow. Some women endure this process to gain the pain

relief commonly associated with their cycle whereas others simply choose to avoid saunas use during that time of the month.

JOINT INJURY: If you have a recent (acute) joint injury, it should not be heated for the first 48 hours after an injury or until the hot and swollen symptoms subside. If you have a joint or joints that are chronically hot and swollen, these joints may respond poorly to vigorous heating of any kind. Vigorous heating is strictly contra-indicated in cases of enclosed infections be they dental, in joints or in any other tissues.

IMPLANTS: Metal pins, rods, artificial joints or any other surgical implants generally reflect Far infrared waves and thus are not heated by this system, nevertheless you should consult your surgeon prior to using an Infrared Sauna. Certainly, the usage of an Infrared Sauna must be discontinued if you experience pain near any such implants. Silicone does absorb Far infrared energy. Implanted silicone or silicone prostheses for nose or ear replacement may be warmed by the Far infrared waves. Since silicone melts at over 200°C (392°F), it should not be adversely affected by the usage of Infrared saunas. It is still advised that you check with your surgeon and possibly a representative from the implant manufacturer to be certain. _____ Patient Initials
