

GPT Stage:
Manufacturing

AUTONOMOUS 0 ENERGY, LLC

A Fundamental Innovation

Richard A Austin
CTO/Founder

The Pitch:

What if you never paid for electricity again?

Meet Autonomous Energy!

A non-consumable, completely mechanical, off-grid, fundamental energy source.

That generates clean electricity 24/7 without resources.

It is the only energy source that can operate underground, underwater and in space.

With limitless global economic possibilities!

The Problem:

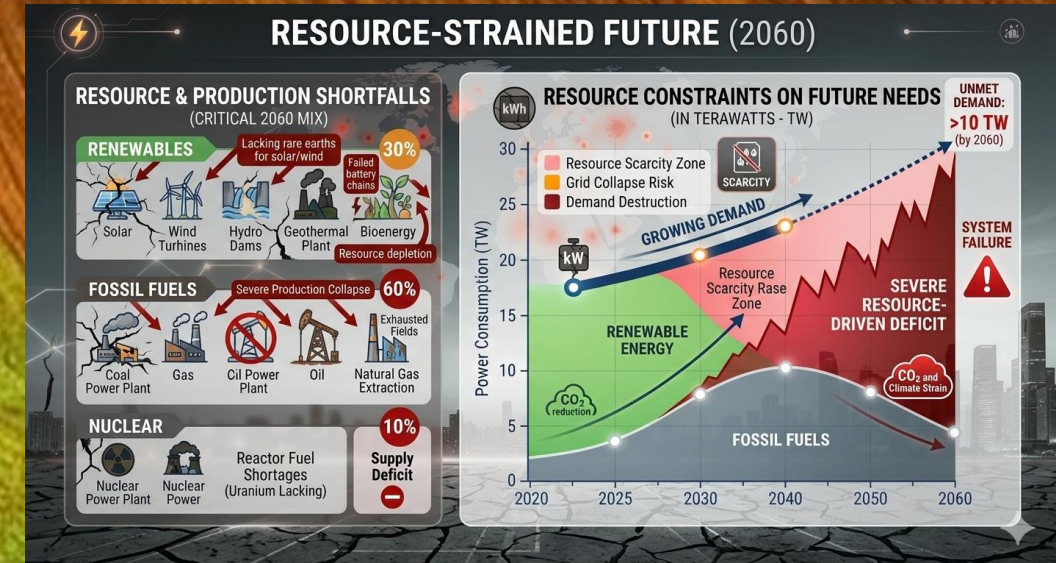

Current world energy sources consume way too much product and tend to be large and destructive.

Cost of maintaining current world energy sources is becoming volatile.

Lack of enough energy sources to power both the community and technology requirements does not exits.

No current energy source allows for prolonged space travel.

Current energy sources are leading to an acceleration of global atmospheric destruction.

The Solution:

We have created the first energy source that produces more energy than it consumes.

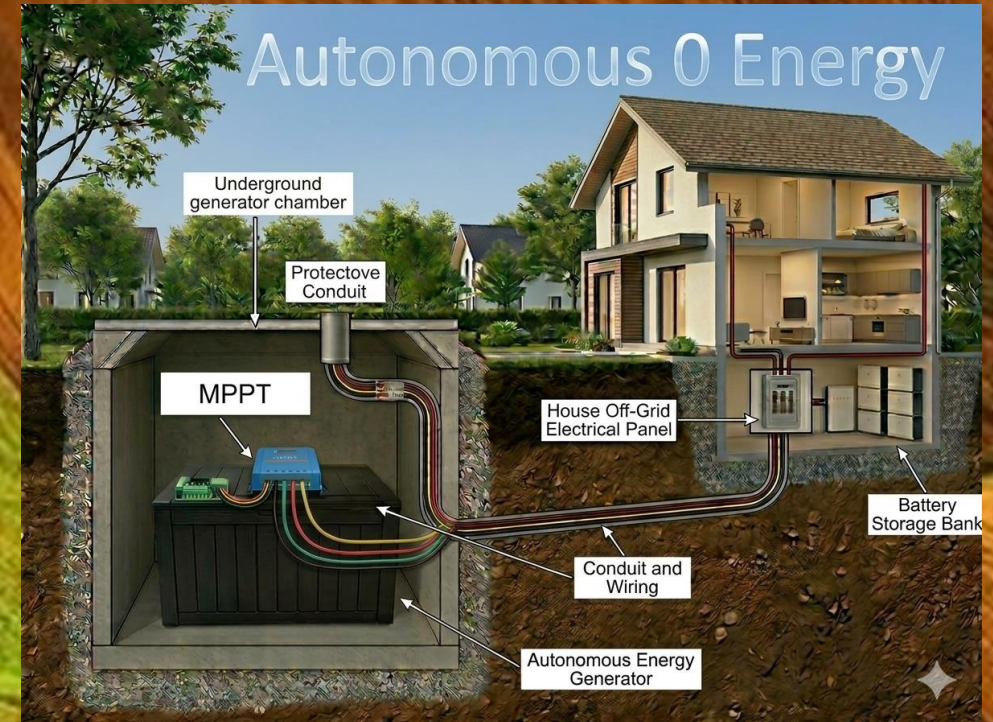

It then creates energy from its own process and becomes the first nonconsumable energy source.

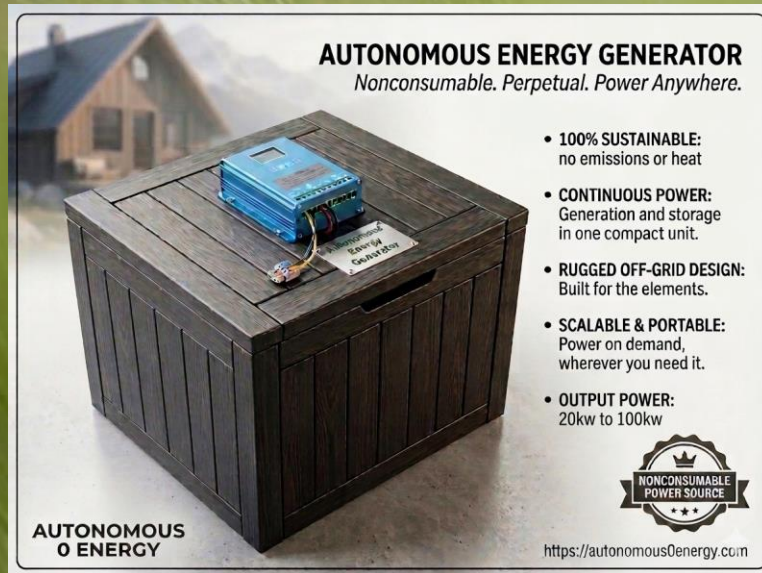

This means humanity can produce unlimited free energy without emissions, byproducts, or heat.

It is an individually maintained off-grid energy source that is only limited in energy production by the size and components used to create the device.

Autonomous Energy products will be easily maintained and managed by current HVAC and Electricians, and in many cases the owners. (manuals will be widely published)

Energy creation is free and can be everywhere now!

Demo video:

<https://youtu.be/IXyzC1wnsmY?si=DVBNL1vWngxSKY-p>

Product Demo / Use Case:

The demo shows a fully working prototype of an Autonomous Energy Generator built to power an entire 3400sqft house for free.

18-inch squared box that weighs 35lbs and creates 34kw of nonconsumable constant energy.

Install a Transfer Switch (ATS) on your house electrical box, then plug the Autonomous Energy Generator into that in your basement.

Currently, electrical companies will not let you go off-grid. Laws will have to be passed to get rid of electrical companies and their meters.

Business Model:

Mission Statement: To deliver absolute energy independence through reliable, sustainable, and entirely decentralized micro-manufacturing.

The Technology: Autonomous 0 Energy manufactures a proprietary **20kW and 100kW AEG unit**. The core proprietary advantage is an internal kinetic-induction loop combined with advanced solid-state storage, yielding an energy generation cycle independent of solar irradiance or wind speeds.

Manufacturing Structure: Autonomous 0 Energy operates on a **light-assembly manufacturing model**. Precision components (machined housings, specialized control boards) are outsourced to ISO-compliant contractors, while final assembly, critical calibration, and stringent quality control testing happen in-house.

Facility Location: A **12,000 sq. ft. industrial facility** optimized for cellular assembly line production, component storage, and a specialized electrical burn-in testing lab.

Supply Chain Management: Critical raw materials (solid-state electronics, magnets, high-grade alloys) are dual-sourced from vetted domestic suppliers to avoid single-point bottleneck vulnerabilities.

Quality Assurance (QA): Each AEG unit will undergo a mandatory **48-hour automated load-testing regimen** to verify power output stability and thermal control tolerances prior to packaging and dispatch.

Intellectual Property Licensing (IP): In reference to the IP that creates the energy, Autonomous 0 Energy's Over-unity device, we can sell licensing to produce other Autonomous Energy products. This can counter any global economic struggles from the AEG being destructive to current energy markets.

**ARE YOU READY TO CHANGE
THE WORLD?**
