Non-Adherent Pads

Ideal for lightly draining wounds, these highly absorbent pads provide cushioning protection without sticking to the healing area. Sterile.

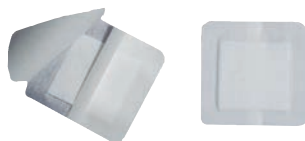

P150155	2" x 3", 100/bx
P150160	3" x 4", 100/bx

Transparent Frame-Style Film Dressings

This multipurpose, transparent film dressing provides a thin flexible covering to help protect the wound surface or secure catheters and IVs. The dressings are water-resistant to enable patient bathing and transparent to permit observation without removing the dressing. Moisture vapor permeability allows excess moisture to vent while maintaining a moist wound environment conducive to healing. The latex-free adhesive is gentle on the skin. Sterile.

P157402	2 3/8" x 2 3/4", 100/bx
P157404	4" x 4 3/4", 50/bx

Bordered Island Gauze Dressings

An absorbent island dressing constructed with a heavy-duty absorbent pad and conformable, non-woven fabric adhesive backing. The porous structure of the non-woven fabric ensures air and water vapor permeability. The fabric is stretchable, conforms well to body contours and allows body movements when in place. The adhesive has been designed to be gentle to the skin but at the same time provide secure fixation. The wound pad can absorb moderate amounts of wound fluids and the low-adherent surface reduces the risk of adherence to the wounds. Sterile.

P157204	4" x 4", 2" x 2" Pad, 25/bx
P157206	6" x 6", 4" x 4" Pad, 25/bx

Waterproof Composite Island Dressings

This dressing has four distinct layers designed to cover all stages of wound care. Layer 1, a non-adherent contact layer, protects the wound site and will not stick to granulation tissue. Layer 2, a soft pad, absorbs drainage. Layer 3, a non-woven backing with an adhesive border, securely holds the contact pad in place. Layer 4, a semi-occlusive, polyurethane film, helps deter external contaminants and maintains an optimal wound environment. The vapor permeable film coating allows showering and protects the wound from water and contamination. It also protects clothing and bed linens from blood or exudate strike-through. Sterile.

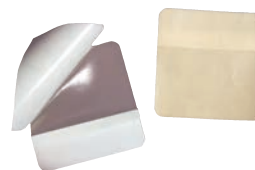

P157304	4" x 4", 2" x 2" Pad, 10/bx
P157306	6" x 6", 4" x 4" Pad, 10/bx

Non-Adhesive Foam Dressings

This dressing is designed with cost-effectiveness in mind, yet will provide a clinically effective dressing for management of exudating wounds. It is made of a non-adherent, highly absorbent, lint free polyurethane foam. Featuring a thick and very soft construction, it is extremely conformable and comfortable, especially for painful wounds where some protection and cushioning are desirable. Conformability makes this dressing ideal for difficult to dress areas of the body. Sterile, Polyurethane.

P157504	4" x 4 1/4", 10/bx
---------	--------------------

Hydrocolloid Dressings

The ultra-thin hydrocolloid is 15mm. Our standard hydrocolloid is capable of long wear time while reducing profile and weight by 25%. The outer polyurethane layer provides a barrier to water and bacteria, while maintaining a moist environment. The semi-occlusive properties allow for oxygen and moisture vapor transmission creating the optimal conditions for wound healing. Sterile.

P157602	Thin, 2" x 2 1/8", 20/bx
P157604	Thin, 4" x 4 1/4", 10/bx
P157614	Regular Thickness, 4" x 4 1/4", 5/bx

SKIN & WOUND CARE – ORTHOPEDIC & PHYSICAL THERAPY

Calcium Alginate Dressings

Calcium alginate is a wound exudate absorber for moderately to heavily draining wounds. It may be appropriately used for Stage II and IV pressure ulcers, venous ulcers, arterial and diabetic ulcers, donor sites, superficial burn wounds, surgical incisions, abrasions, lacerations and traumatic wounds. Available in flat dressings or wound packing rope. Sterile.

P157702	2" x 2", 10/bx
P157704	4 ¼" x 4 ¼", 10/bx
P157712	12" Ribbon, 5/bx

Transparent Tape

Ideal for securing I.V. tubing and catheters, primary wound dressings, tubing and drainage lines. Micro perforation allows for bidirectional tearing. Easy to tear and stretch. Highly porous for breathability. Water resistant and latex-free.

P152005	½" x 10 yds, 24/bx
P152010	1" x 10 yds, 12/bx

TENS Unit

Transcutaneous electrical nerve stimulation (TENS) therapy is the most common form of electrical stimulation used for pain management. This small, battery-operated device delivers low-voltage electrical current through the skin via Pro Advantage electrodes placed near the source of pain. The electricity from the electrodes stimulates nerves in the affected area and sends signals to the brain that "scramble" normal pain perception. Available in analog and digital options.
