Beth-El Group Air Purification

Since the original company's inception in 1974, Beth-El-Zikhron Yaagov Industries Ltd has spawned numerous daughter companies in the filtration, manufacturing and food production industries. The heart of the Beth-El Group revolves around NBC protection and filtration; however, many of these innovations have grown to be a wide range of manufacturing facilities, unique and varied product lines, and separate corporate entities.

The Sterionizer™ is a patented bipolar ionisation air purification device that brings healthy natural air quality to closed indoor environments. In natural habitats, solar and earth-based thermal energies create positive and negative oxygen ions that clean and renew outdoor air by removing harmful pollutants, such as bacteria, viruses, fungi, and spores.

The Sterionizer™ generates the same positive and negative ions that are naturally produced, which purify and freshen indoor air by eliminating harmful pollutants.

The Sterionizer™ can be easily integrated into various air treatment products, such as air conditioners, air purifiers, blowers, ventilators, humidifiers, dehumidifiers, and more.

Through the 1st State COVID Response program, Sterionizers are currently being installed in five schools in Christina County, Delaware – an early education school, an elementary school, a middle school, a high school, and a special school. This represents a qualifying step prior to installation in all thirty-two schools within the Christina School District.

ADDITIONAL INFORMATION ABOUT BETH-EL GROUP STERIONIZER™ AND PARTICIPATION BY ITS DISTRIBUTOR, EAGLE X PRO, IN KEYSTONE COVID RESPONSE AND MOST-FAVORED PRICING IS AVAILABLE FROM THE GC3 STRATEGY OPERATIONS TEAM
