

AI Evaluation Bridge – Golden Response Example

Definition

A golden response represents the ideal answer used as the benchmark for evaluating AI outputs.

Example Golden Response

The 2008 financial crisis was largely caused by excessive risk in mortgage lending, the collapse of mortgage-backed securities, and failures in financial regulation.

How Evaluators Use It

- Compare AI responses to the ideal answer
- Check whether key concepts appear
- Verify that reasoning aligns with trusted sources

Purpose

The golden response establishes the standard against which other outputs are measured.
