

## REDUCING RISK INSIDE THE TANK

Xtreme Tank Technologies helps oil & gas operators reduce risk and improve efficiency inside produced water and storage tanks — through fluid management, emissions control, oil skimming, and bacteria growth reduction. Our flagship **Freedom Tool** delivers measurable results with minimal intervention.

### OIL SKIMMING

Recover sellable oil from produced water tanks at any fluid level — without vacuum trucks or costly hauls.

### GAS & EMISSIONS CONTROL

Sweep and purge H<sub>2</sub>S to protect workers, slow corrosion, and minimize environmental hazards above the fluid interface.

### BACTERIA GROWTH REDUCTION

Maintain optimal fluid chemistry inside the tank to suppress SRB and other bacteria that accelerate corrosion.

### FLUID CHEMISTRY

Introduce surfactants, inhibitors, or other chemical treatments below the gas-liquid interface with precision.

### STATIC GROUNDING

Eliminate spark risk right in the flash zone — where gases are most active — enhancing safety and compliance.

### FIRE SUPPRESSION COMPATIBLE

The Freedom Tool integrates with all fire foam types, adding a critical layer of protection to tank operations.

Ready to lease the Freedom Tool for your facility?

Xtreme Tank Technologies delivers flexible lease options — deployed on your schedule.
