

HAIR CARE ROUTINE

SLEEPING

Tie up your extensions into a low braid or bun. Use a silk bonnet to protect your hair from frizzing during your beauty sleep!

BRUSHING / OILING

Brush your extensions using your double soft bristle brush. Brush each section, making sure your extensions are secure and you're holding the top section of the extension. We recommend oiling your hair extensions twice a day, working it through to the ends to keep your hair extensions nourished.

PRODUCTS

We recommend using our injected weft sulphate shampoo and conditioner range. Wash extensions once or twice a week.

HOW TO RESILL YOUR WEFT

We recommend resealing your tape weft hair extensions every 6 to 8 weeks to ensure a secure and long-lasting hold.

HOW TO REMOVE YOUR WEFT

Remove your tape-in hair extensions easily by heading to our website and purchasing our removal tape spray.

STYLING YOUR WEFT

Wait a week before putting your hair up high while wearing your injected weft. This allows your hair to drop naturally and become more flexible for styling.

HOW TO WASH YOUR WEFT

To start the washing process, hold the weft in one hand at the top, submerge it into the water, and gently wash the hair, working the shampoo in with light strokes. When washing, make sure to handle the extensions gently and avoid rubbing them vigorously as you might with your natural hair. We recommend washing your hair extensions no more than two times a week. Don't leave your hair wet for long periods of time.

HOW TO DRY YOUR WEFT

Give the hair a spritz with a good heat protection spray all over then rough dry on medium heat. Keep the direction of the air pointed down towards the ends and never upwards as this can cause the hair to seize up and tangle. Never tip your hair upside down when drying hair extensions.

INJECTED WEFT

Injected Weft is a new extension service that gives you instant volume in 15 to 20 minutes. This unique hybrid hair extension combines easy application with an invisible, seamless blend of our weft tape-in extensions and the volume of our injected weft extensions. Perfect for the woman-on-the-go wanting a glamorous look.

Injected Weft features our luxurious 100% Cuticle Slavic 12A Human Hair. Each strand retains its shine and luster, deemed the highest quality hair type for salon professional extensions. The hair remains tangle-free throughout its lifetime.

Crafted onto an ultra-thin injection weft, expect completely flat, seamless injected tracks that sit so close to the hairline they are totally invisible. Each hair is knotted or singly placed onto a PU injected band, making the extension appearance look completely light and natural. You can apply the tape weft to the area that requires volume and thickness in one fast, smooth movement. These hair extensions can be taped into the hairline by sandwiching each weft together and sealing. Alternatively, injected wefts can be used individually and applied with our super strong hold

tape, lasting between 6 to 8 weeks when sandwiched together, and 4 weeks when used individually.

“Injected Weft is ideal for ladies who prefer a lighter finish with more natural results. Pre-taped, the application is securely sealed for up to 4 to 8 weeks. Withstanding washing, brushing, and daily styling, these hair extensions can be used for multiple salon applications. Professionals can easily remove them using the Injected Weft hair extension remover spray.”
