## Why Another Supply Company LLC?

- ✓ As a supplier of information technology and office equipment, supplies, software, and services, we know that maintaining up to date supply chain security controls becomes increasingly important every year. Our policies, processes and quality controls are developed and managed in accordance with ISO 31000 and NIST 800-171 guidelines and recommendations, and our company structure was built around a business model focused on servicing public sector customers.
- ✓ As a certified economically disadvantaged woman and service-disabled veteran owned HUBZone small business we know we check a lot of boxes, but we also know we are... well... ANOTHER supply company. Helping us grow: 1) provides a living wage for a service-disabled female veteran who was raised in, and returned to live in, a historically low-income area, 2) provides us the ability to offer employment to others who live in our HUBZone and currently lack opportunity, and 3) ensures you don't receive ANY second sourced or gray/black market goods.
- ✓ Drinking the same cup of coffee every day is boring, even if it's an exceptional brew, and we believe that using the same supplier over and over again is too. We're just looking for a shot to earn some of your business. We're not going to or email every day/week/month and clutter up your inbox, or try to target you on social media, and we don't sell or reuse customer information... customer information is only used or shared with partners as required for the purposes of order fulfillment and performance of services.
- ✓ Although we're a young company, our management team represents: over 20 years of recent experience in working with the General Services Administration FAS, the State of Pennsylvania, the State of Virginia, and other federal and state departments and agencies; and over 20 years of software development, project management, supply chain management, and COTS order fulfillment experience. We are very capable, and we hope you'll give us the opportunity to prove it...
