* Can not be combined with any other coupon discounts

Liquid Ice Melt is safe to use on:

- Concrete (including new concrete)
- Brick
- Asphalt
- Wood (treated and untreated)
- Mortar
- Stucco

We hit **BEFORE** the storm does - our deicing application **gets you prepared** for the first 2 inches of snow and proactively begins to work as soon as it falls on your driveway, sidewalks, stairs, parking areas or any other surfaces - By signing up for pretreatment we automatically put you in the loop.

All of the products that we use for any of the work we perform is people, pet and environmentally friendly. This includes our sealers, paints and deicers.

You tell us during your initial signing up the areas you want treated (driveway only, driveway and sidewalks, etc) and we pretreat your designated areas each time our service is required. If at anytime you wish to modify the areas serviced, just send a quick email before the next event.

Once a possible weather event has been announced, a blanket email will be sent out to participants asking for pretreatment approval.

Simply reply "yes" and we will schedule you into the route to place de-icer on the surfaces you want to keep clear. Pretreatment can be placed up to 72 hours in advance of an event. Once performed an electronic invoice will be sent to you for review and remittance.

We will not be able to treat during a storm.

Easy-Safe-Effective

As fantastic as liquid ice melt is before a storm, it's just as great after. Those high-traffic footprints and tire tracks that are packed down hard? Spray them and watch them melt away.

PER VISIT - PRICING

- **\$45.00 minimum service fee**
- **Includes up to 1000' square feet of any combination of areas to pretreat - concrete, brick or asphalt and only .25 cents per square foot for any remaining areas**

A realistic expectation must be had when dealing with any snow/ice removal. It doesn't make it disappear. Liquid deicers work by melting the snow and ice as it falls. It will also act as a barrier, so when it is time to shovel or plow, the slush and snow is not stuck to the surface and it makes any accumulation easier and quicker to remove.

**Don't wait until it's too late!
Get on the list now**
