# Latent Organization ▭ ƒ ◉ 〰

A Structural Framework for Cognitive Typology

Core Premise

MBTI types aren't just preferences or personality traits. They reflect patterned ways of processing meaning, attention, and interaction. Structure ▭, Function ƒ, System ◎, and Procedure 〰 serve as a sociological lens—revealing how each type operates within roles, behavior, and meaning-making.

Key Innovations

- Hybrid Constructs: Each type has a two-part cognitive role (e.g., Systematic Functionalist)
- Cognitive Interaction Code: A 16-code system (D/S patterns) to describe intertype dynamics
- Mental State Variants: Adds 6 functional overlays (e.g., depression, ADHD) for 96 total types
- A socio-implicative model connecting all 16 types through four interlocking roles—Discovery, Validation, Synthesis, and Direction.

Sample Hybrid Constructs

Type	Construct	Cognitive Output
ENFP	Systematic Proceduralist	Reconstruction
ISTP	Functional Structuralist	Mechanism
INFJ	Systematic Functionalist	Narrative
ESTJ	Procedural Functionalist	Operation

Why It Matters

Latent Organization creates a functional, scalable typology system—designed to support AI modeling, educational design, and psychodynamic profiling with structural integrity.
