

Post-Care Instructions

Haircuts & Hair Trims

The health of your hair is our top priority. So, we assembled the following aftercare tips for your haircut and trim to help your hair service last longer.

- **Use a “sulfate-free” shampoo and conditioner.** The main purpose of shampoo is to remove environmental dirt and oil from the surface of the hair and scalp. With conditioner, its purpose is to condition and smooth the hair cuticle rather than cleansing the hair strands. Mechanical, environmental and chemical damage will cause the hair to look dull, frizzy, and tangled. The upshot to using professional shampoo and conditioner is it will increase shine, reduce frizz and static, as well as help to manage split ends—so your hair is easier to style. We recommend OYA, Trissola or milk_shake hair products.
- **Go easy on the heat.** Styling with tools—blow-dry, flat iron, curling iron and wands— will draw out moisture, leaving your hair weak, dry and possibly brittle.
 - ▲ Always use a thermal protectant like **OYA Shield** before you style, and use tools at the lowest setting possible (300-360 degrees).
- **Deep condition your hair.** In the dry Arizona environment, your hair needs an extra “boost” to keep it hydrated and strong. Weekly deep conditioning at home is recommended. We recommend **OYA Treatment** or **Trissola Hydrating Mask** to help keep the hair healthy. If you prefer, you can schedule a [Deep Conditioning Treatment](#) once per month at the Salon as an alternative option.
- **Hair boosting additive.** For dry, chemically treated hair, **OYA Elixir** has been developed to protect color, penetrate the hair, and reconstruct chemical, environmental and mechanical damages from within. Add a couple drops of this to your shampoo, conditioner or deep conditioning treatment

1st – Shampooing

- Use a sulfate-free and paraben-free shampoo. We recommend the brands “OYA”, “milk_shake” and “Trissola”.
- Shampoo your hair twice each time you wash it. The first application will clean the hair of oil and dirt. The second application, use less shampoo; you’ll notice the second application will lather much greater than the first time. This means your scalp is clean.

2nd – Condition

- Use a sulfate-free and paraben-free conditioner. We recommend the brands “OYA”, “milk_shake” and “Trissola”.
- Apply to mid-length and ends, leave on for 2-3 minutes, then rinse completely.

3rd – Treatment weekly/ bi-weekly/monthly

Treatments are suggested to moisturize, strengthen, and nourish dry, coarse, color-treated hair, while preserving color vibrancy.

Apply to freshly shampooed hair. Massage the recommended amount into damp hair from root to ends. Leave in 3-5 minutes. Rinse.

4th – Towel Dry Hair

Towel or air dry your hair as much as possible before using a blow dryer.

5th – Leave-In Conditioner

Leave-in conditioner rehydrates your hair. Even though you used conditioner after you shampooed, the act of rinsing the conditioner with water may leave the hair dehydrated. Leave-in conditioner protects color radiance, intensifies shine, controls frizz and flyaways, and adds a subtle fullness to each strand while detangling.

Mist on clean, damp or dry hair in sections and comb through prior to styling.

6th – Styling:

While you might not be able to ditch heat-styling tools entirely, minimizing potential damage is simple. Blow dryers, flat irons, wands and curling irons may finish your look, but the heat can also create split ends and fade your color. When you do have to use heat-styling tools, spray a heat protectant on your strands beforehand like **OYA Shield**. Spray heat protection throughout the hair and comb through.

When styling, keep in mind **there are 3 sections to your hair – the roots, mid-shaft and ends**. Each of these sections may require different styling products.

Roots: _____

Mid-shaft: _____

Ends: _____

Sun Protection

While the sun might naturally lighten your hair, it can also damage and dehydrate your hair. Using a leave-in conditioner, thermal protectant, and dry conditioner each day will protect hair from environmental heat. Hydrolyzed Silk and Provitamin B5 help hair retain moisture, building strength and resilience.

Misc. information

- ▲ **Water temperature:** Wash your hair with cool to lukewarm water. Hot water is more likely to dry out hair and strip out color. Tap water can oxidize your blonde, resulting in unwanted shades. Using a color-correcting shampoo once a week can soften brassy or coppery undertones.
- ▲ **Shampoo frequency:** To reduce color fading, skip daily shampooing. Use a dry shampoo in between to soak up oil and improve shine.
- ▲ **Swimming & Chlorine:** Avoid swimming in chlorinated pools when you can. If you do take a dip, wet your hair and spray it with a leave-in conditioner before diving in. Wash hair after swimming with a gentle clarifying shampoo. We recommend **OYA Clarity**, it is safe for daily use.
