## WiFi

Dear Shores Family,

April 21, 2025

The Board has contacted Omni which is the company that provides our WiFi signal and Marty at Buckeye Tech which provides/sets our access points. Neither has a better solution for our WiFi signal unless we go all-in which would cost the HOA thousands of dollars. Our system is not designed to meet the high capacity bandwidth capacity that is needed to accomodate the increased streaming that is occuring with TV's and other devices. This seems to be the norm today.

As we mentioned at the Annual Meeting, the HOA provides basic WiFi and cable. Buckeye Tech has suggested that if you are having a problem with your WiFi signal that you find your own solution.

Some cell phone providers have "hot spots" that can be part of your cell plan, that could be a resolution for a specific Unit that is having an issue. Apparently, signal boosters are not the cure.

As an Owner, if you are upgrading your internet service through a cable company, please contact the Property Manager and make him aware of this so we know where, or if, wires are being run. If you go with Verizon or a cell phone company, those units are mostly wireless.

Board of Directors,  
Shores of Port Clinton
