

*Full-Access (Frameless) Cabinetry provides the best use of the available space along with its clean lines and stunning aesthetics.*

Cabinets for Kitchen,  
Bath, Study, Laundry  
Room and More...

**MORE  
SPACE  
INSIDE**

## The Full-Access Product Difference

Full Access cabinetry, also known as frameless, represents an innovative approach that brings the highest level of function and style to the hardest-working rooms in the home. And behind every beautifully finished cabinet there is worry-free strength and durability unlike any other. Here's five reasons why full-access will help you get the job done better.

- *More Space Inside*
- *Diverse Styles, Colors, Materials*
- *Best "Green" Box Construction*
- *Superior Finish and Durability*
- *Custom Design Flexibility*

# More Space Inside!

What's the difference between a full-access kitchen versus a framed kitchen?

## 7 more bags of groceries!

The InnerMost kitchen above looks like most other quality kitchens, but this kitchen has approximately 11,250 more cubic inches, holding seven more bags of groceries.

### 60% more drawer space

Full Access drawers are wider and have more depth, so you can store larger items and more of them.

### Greater access

Unobstructed by a frame, interior storage is easier to reach and includes full depth shelves and full extension drawers and cabinets.

### An inch more depth

Standard 12 inch deep profile cabinets with no face frame provide more space to store another row of glasses (reusing your usable storage space).

# Diverse Selection

More colors, more materials, more styles

The beauty, strength and versatility of full-access cabinets make them right at home, in any home. Full-access isn't just a contemporary style — whether the consumer's style is traditional, transitional or contemporary, full-access delivers the look your consumers want with the space they need.

From traditional, furniture styles...  

...to contemporary, eclectic styles  

Traditional  
Doors  
styles in  
4 species

Transitional Doors

with endless options stained or painted finishes.

Contemporary  
Doors

Available in premium, exotic & reconstituted veneers.

TFL  
Doors  
in either Vertical or Horizontal grain pattern

# Built to Be the Best

**Strongest support**  
Push-in screws and wood glue used on 1/2 inch reinforced tapered post provide strongest support when cabinets are attached to wood studs or brackets like other cabinets brands.

**Widest stabilizer**  
An oversized 6 inch stabilizer keeps the cabinets square and stable through shipping, installation and long after the cabinet is installed.

**Advanced hinge**  
New soft-close hinge has an on/off switch to control speed and allows functionality.  
The integrated storage adjustable hinge will not damage the cabinet when adjusted after installation.

**Best technique**  
Solid 3/4 inch wood drawer box with 1/4 inch fully supported plywood bottom holds more weight than other drawer box assemblies.

**Quality crafted**  
Directly constructed represents the quality craftsmanship in every drawer box and drawer set leg.  
Full construction, undermount guides provide the best access to the drawer opens.

## Optional enhancements

Further expand the look or material choices.

Enhance to 3/4-inch thick plywood material on top, bottom, sides, back, shelves and stretchers.

Matching ends (modification)

Full Extension drawers

Heavy-duty guides increase weight capacity to 110 lbs.

## Easy-to-clean interiors

Another premium feature included with every cabinet is the natural maple melamine interior. Melamine is one of the most durable interior options available, making interiors brighter and cleaning easier. This tough, long-lasting material is superior to paper or vinyl interiors used in other cabinet brands.

3/4-inch thick material is used on the sides of every cabinet

Matching edgebanding on finished ends provides consistent, complementary color on all visible edges

3/4-inch thick full depth shelves

Staggered aluminum legs and drawer features full extension, undermount guides with 75 lb. capacity

Shim, spacers feature on all drawers and doors prevent tipping

Push-in door bumpers provide long-lasting protection and sound absorption compared to lesser quality aluminum bumpers

# Custom Design Flexibility

Factory-installed options save money on installation

Installed accessories are a convenient way to offer additional options and deliver complete solutions that save time and labor during installation.

Select from more than 70 modifications to turn common cabinets into custom solutions that allow installation to go faster and finished designs to fit right the first time.

## Modifications in as little as 1/4 inch increments

Put innovation to work for you. Reduce the use of fillers and other components by modifying the height, width or depth of cabinet down to 1/4 inch increments. These made-to-order options are produced to your specification and ship complete for easier and faster installation.

## Custom Quote services for truly unique design needs
