

2nd sample for Predictive Genetic Diagnosis

Patient

Surname: _____

First name: _____

Date of birth: _____

Sex: male female

Material

Blood _____ ml (min. 1-2 ml EDTA-blood)

Pat.-ID: _____

Date of sample collection: _____

Samples can be sent by mail in cardboard box or air cushion envelope. Samples should not be exposed to direct sunlight.

Dear patient,

Best practices require that results of a predictive genetic diagnosis should always be confirmed by analysing a second, independent blood sample.

Within the next two weeks, please visit your general practitioner to have an EDTA-blood sample (at least 1 ml) collected. The blood and this form should be sent to the following address by regular post:

CeGaT GmbH
Paul-Ehrlich-Str. 23
D-72076 Tübingen
Germany

There is no additional cost to you for our follow-up analysis.

CeGaT is accredited by DAKKS according to DIN EN ISO 15189:2014, by the College of American Pathologists (CAP) and CLIA.
