Another Vita Planta testimonial:

John Baldwin, of Pinetop, Arizona was given Vita Planta to use on both his garden and fruit trees early in the summer of 1991. The report on his garden was very favorable noting that the individual plants treated with Vita Planta produced healthier plants, more blossoms and were bug free. The report on his fruit trees also showed superior results. John used Vita Planta to water his trees at five gallons twice a week and also sprayed the trees occasionally. The trees produced their normal sweet fruit. Late in the fall the tree blossomed again and as the pictures show, John had both fruit and blossoms on his tree in late September. John brought the following pictures into Mountain Air Nursery on October 1, 1991.
