

June 13, 1991

TO WHOM IT MAY CONCERN:

We have become firm believers in the values of

VITA FLANTA

as an aid for good growth and vitality in plants, trees, shrubs, lawns, etc.

In January, 1991, we moved into a home in Springerville that had been vacant for several years. The yard had been sadly neglected and suffered from lack of watering.

As spring approached we began to try to revive and preserve whatever might still have some life remaining. Despite regular watering, however, many shrubs and trees continued to appear completely dead.

We shared our problem with the good folks at Mountain Air Nursery in Show Low who recommended VITA FLANTA. We have been using this product for about ten weeks according to their direction with very favorable results. Many of the shrubs and trees we thought were dead or showing only minimal green growth have now developed full leafage and are flourishing.

We are praising VITA FLANTA to our friends in the hope that they too will enjoy the same impressive results from its use.
