

August 13, 1992

Sir:

Because you talked me into buying your "Vita Planta" plant food, and I was so skeptical of all your claims I just had to write to tell you how wonderful it really is.

We transplanted 3 blue spruce trees in our front yard in White Mountain Summer Homes in the fall of 1972. They were all about 20" high! One did real well and is now over six feet tall and full on all sides.

The other two grew about $\frac{1}{2}$ as much and were very scrawny with large bare areas between the branches and the branches themselves only had needles on about the last foot of them.

On May 20, 1992 I fed each one 1 oz. of "Vita Planta" per gal. of water as directed. Within 6 days I could see tiny little needles popping out on the trunk of the tree and on the bare parts of the branches.

of both trees.

Now, there are new branches growing on all sides of the tree's trunk, and it is feeling in nicely. I feed them every 2 weeks and I'm sure that by next year they will look as good as the other one does.

Thank you for talking me into buying 'Vita Planta'. It's even better than Miracle Grow.

Yours truly,
Mrs. Terry Robinson
