

Physical activity readiness questionnaire (PARQ) and you

(A questionnaire for people aged 15-69)

Regular physical activity is fun and healthy, and more and more people are starting to increase their daily activity levels. Being more active is very safe for most people. However, some people should check with their doctor before they make drastic increases to their activity levels.

If you are planning on becoming much more physically active than you are now, start by answering the seven questions in the box below. If you are between the ages of 15 and 69, the PARQ will tell you whether you should check with your doctor before you start. If you are over 69 years of age and you are not used to being very active check with your doctor.

Common sense is your best guide when you answer these questions. Please read the questions carefully and answer each one honestly: check 'YES' or 'NO'

	YES	NO
Has your doctor ever said that you have a heart condition and that you should only do physical activity recommended by a doctor?		
Do you feel pain in your chest when you do physical activity?		
In the past month, have you had chest pain when you were not doing physical activity?		
Do you lose your balance because of dizziness or do you ever lose consciousness?		
Do you have a bone or joint problem (for example, back, knee or hip) that could be made worse by a change in your physical activity levels?		
Is your doctor currently prescribing drugs (for example, water pills) for your blood pressure or heart conditions?		
Do you know of any other reason why you should not do physical activity?		
If you answered YES to one or more questions:		
Talk with your doctor by phone or in person before you start becoming much more physically active or before you have a fitness appraisal. Tell your doctor about the PARQ and the questions to which you answered 'YES'.		
<ul style="list-style-type: none"> You may be able to do any activity you want – as long as you start slowly and build up gradually. Alternatively, you may need to restrict your activities to those which are safe for you. Talk with your doctor about the kinds of activities you wish to participate in and follow his/her advice. Find out which community programmes are safe and helpful for you. 		
If you answered NO to all questions:		

If you answered 'NO' honestly to all PAR-Q questions, you can be reasonably sure that you can

- Start becoming much more physically active – begin slowly and build up gradually – this is the safest and easiest way to go about it.
- Take part in a fitness appraisal – this is an excellent way to determine your basic fitness so that you can plan the best way for you to live actively. It is also highly recommended that you have your blood pressure evaluated. If your reading is over 144/94, talk with your doctor before you start to dramatically increase your physical activity levels.

DELAY BECOMING MUCH MORE ACTIVE:

- If you are feeling unwell because of a temporary illness, such as a cold or fever, wait until you feel better.
- If you are or may be pregnant talk to your doctor before you become more active.

PLEASE NOTE:

If your health changes so that you then answer 'YES' to any of the above questions, tell your fitness or health professional. Ask whether you should change your physical activity plan.

"I have read, understood and completed this questionnaire. Any questions I had were answered to my full satisfaction".

Name: _____ Signature: _____

Date: _____ Witness _____

Signature of parent or guardian (for those underage):

NOTE: This PAR-Q is valid for 12 months from the date of completion and becomes invalid should your condition change so you would answer YES to any of the above questions.

Informed consent

1. Explanation of the exercise test - you will perform a number of exercise tests. The exercise intensity of each will be at a level appropriate to your ability. I may stop the test at any time because of signs of fatigue or, you may stop when you wish because of personal feelings of fatigue or discomfort.
2. Risks and discomforts - there exists the possibility of certain changes occurring during the test. They include abnormal blood pressure, fainting, disorder of heartbeat and in rare instances, heart attack, stroke or death. Every effort will be made to minimise these risks by evaluation of preliminary information relating to your health and fitness and by observations during testing. Trained personnel are available to deal with unusual situations that may arise.
3. Responsibilities of the client - information you possess about your health status or previous experiences of unusual feelings with physical effort may affect the safety and value of your exercise tests. Prompt reporting of feelings of effort during the exercise tests are of great importance. It is your responsibility to fully disclose such information when requested.
4. Benefits to be expected - the results obtained from the exercise tests will assist in evaluating what type of physical activities you may participate in.
5. Injuries - any questions about the procedures used in the exercise tests are encouraged. If you have any doubts or questions, please ask for further explanations.

Freedom of consent - your permission to perform the exercise tests is voluntary. You are free to deny consent or stop at any point if you so desire

I have read this form and I understand the test procedures that I will perform. I consent to participate.
